Wind speed (kmph)	008	008	008	006	006
Wind direction (deg)	290	290	290	290	290

Crop stage

This is the time for the preparation of punja field. Banana plant is 3 month after planting. This is the time for starting irrigation in coconut and arecanut. It is the time for starting mulching in coconut and pepper.

Agro Meteorological Advisories

Crop	Pest/Disease	Advisories
Rice	-	Ploughing can be started in Punja field.
Coconut		Burying of fresh or dried coconut husk around the palm is a desirable practice particularly for moisture retention. The husk can be buried either in linear trenches taken 3 m away from the trunk between rows of palms or in circular trenches taken around the palm at a distance of 2 m from the trunk. The trenches may be of 0.5 m width and depth. The husks are to be placed in layers with concave surface facing upwards and covered with soil. The beneficial effect of husk burial will last for about 5-7 years. Instead of husk, coconut pith can be buried @ 25 kg / palm / year.
Banana	Leaf eating caterpillar	Spray 2ml of Quinalphos in one liter of water.
