

## Agromet Advisory Bulletin for the District, Kannur

(12.11.2022 to 16.11.2022)

(Issued jointly by Kerala Agricultural University Regional Agricultural Research Station Pilicode & India Meteorological Department)

Bulletin Number: Pilicode/Knr-90/2022

Date: 11/11/2022

### A. Weather Summary of preceding five days

Rainfall, mm	Max. temp., °C	Min. temp., °C	R. H., %	Wind speed, Km/h
6.6	33.4 – 35.4	24.0 – 25.0	65.1 – 90.4	00 – 08.0

### B. Weather forecast for next five days

Parameters	12-11-2022	13-11-2022	14-11-2022	15-11-2022	16-11-2022
Rainfall, mm	8	15	2	1	5
Max. Temp, °C	34	34	34	34	34
Min. Temp, °C	24	24	24	24	24
Max. Relative Humidity, %	90	90	90	90	90
Min. Relative Humidity, %	72	72	72	72	72
Wind speed, km/h	2	2	2	2	2
Wind direction, degrees	230	320	180	230	270
Total cloud cover, octa	8	8	8	8	8

### C. Agrometeorological Advisories

Crop	Stages	Problems	Agro-meteorological advisories
			<b>Light rainfalls are very likely to occur**</b>
<b><u>General conditions</u></b>			<p>Isolated light rainfalls (up to 15.5mm within a time span of 24 hours.) may occur.</p> <p>As per the extended range forecast, there will be normal (weekly 73mm) rainfalls during the next two weeks also. The maximum and minimum temperatures will be lower than the normal during the next two weeks.</p> <p>The sky will be cloudy. High relative humidity will be experienced. High atmospheric temperature and heat index will be felt during the rain free intervals.</p>
<b><u>General Recommendations</u></b>			<p>The weather is favorable for the cultivation of vegetable crops suitable for both cool season and all seasons.</p> <p>Maintain hygiene conditions in crop fields. Infected and fallen nuts, leaves and tree parts should be removed from the fields and burnt.</p> <p>Provide propping to tender stem crops like banana, tomato etc. Ensure sufficient drainage in crop fields. Give popping to slender stemmed and easily lodging crops like banana, vegetables etc.</p> <p>Take care while drying the harvested produces like rubber, cashew nut, copra etc., directly under the sun. Beware of thunder and lightning.</p>

Vegetables	Transplanting/ sowing	<p>This is the right time for transplanting the seedlings of cool season vegetables like cauliflower, cabbage etc.</p> <p><b>Select only well drained area for the cultivation or Ensure good drainage facilities. There should not be any waterlogging in the fields.</b></p> <p><b>Sow/plant vegetables only on raised bunds/ridges/mounds.</b></p> <p>While preparing the land, incorporate lime @ 4kg/cent to the soil. Use Trichoderma enriched farm yard manure/compost. This will check the spread of wilt diseases.</p> <p>Before transplanting, dip the roots of the seedlings in slurry of pseudomonas (20g pseudomonas/litre of water) for 30 minutes. This will help the seedlings to grow vigorously.</p> <p>Also the seedlings can be sprayed with diluted pseudomonas culture solution (@20ml dissolved in one litre of water).</p>	
Rice	Mainfiled	<p style="text-align: center;">Leaf roller</p> 	<p>If leaf folder attack is seen, unfold the leaves by rolling thorny wires/twigs over the canopy. Attack will be more in shaded conditions. Avoid excessive Nitrogenous fertilizers.</p> <p>If the attack is severe spot spraying of Chlorantraniliprole @3ml/10 ltr of water is also advised.</p>
Rice	All stages	<p style="text-align: center;">Case worm</p> 	<p>Destroy the dislodged larvae. After pulling a rope swabbed with kerosene or engine oil. Drain away the water from the fields. Broadcast the mixture containing 1L of Kerosine in 25 kg of saw dust or sand in the field.</p>
Coconut	All stages	<p style="text-align: center;">Red palm weevil</p> 	<p>The palms can be saved only if the attack is diagnosed at an early stage. Hence more frequently inspect the palms. The attack can be diagnosed by the presence of yellowing of upper and middle whorls of leaves and holes at the jointing region of leaf petioles to the trunk. Insect excrement, pupal cases etc. may also be seen in the crown or basins of the palms.</p> <p>Control: Prepare Imidachlorprid solution (@ 1ml/litre of water) and fill in the holes. Adopt field sanitation.</p>
Coconut	All stages	<p style="text-align: center;">Leaf/inflorescence rot</p> 	<p>Apply 1% Bordeaux mixture or 0.3% copper oxychloride solution in the heart of the crown. Apply lime. Spray borax also on leaves @ 5g/l. Also adopt all the basal management practices as described for the yellowing, above.</p>

Coconut	All stages	<p style="text-align: center;"><b>Stem bleeding</b></p> 	<p>Chisel out the affected parts and apply Bordeaux paste.</p> <p>Drench the palm basin (2m radius) with 40 litres of 1% Bordeaux mixture or soil drenching of Hexaconazole 25ml/25 litre of water.</p> <p>After one month, apply 5 kg Trichoderma enriched neem cake and 500g of Ayar® (micro nutrient mixture)</p> <p>In endemic areas, repeat fungicide drenching once in every four months</p>
Black pepper	All stages	<p style="text-align: center;"><b>Foot rot</b></p> 	<p>If disease is seen, drench soil in the plant basins and spray on the leaves with Redmil® (2g/litre).</p>
Cucurbit Vegetables	Planting	<p style="text-align: center;"><b>Downy mildew</b></p> 	<p>As a prophylactic measure apply 'Mancozeb' (@ 2g/l of water). If disease appeared, spray Akomin® (@3ml/L) on both surfaces of the leaves, thrice at 15 days interval. Remove and burn out the infested leaves.</p>
Tomato	Growing stage	<p style="text-align: center;"><b>Wilt</b></p> 	<p>If disease is seen, spray Redmil® (2g/litre) or Akomin® (2ml/litre).</p>
Bitter gourd	Early growth stage	<p style="text-align: center;"><b>Bacterial wilt</b></p> 	<p>Keep the field clean and spray antibiotic strepto cycline 1 capsule per 2 litre.</p>
Brinjal	Flowering and fruit setting	<p style="text-align: center;"><b>Shoot and Fruit borer</b></p> 	<p>Remove and destroy affected fruits and shoots. Spray chlorantraniliprole (coragen 3ml per 10 l of water) 2-3 times at weekly interval.</p>

Arecanut	Various growth stages	<p style="text-align: center;">Leaf blight</p> 	<p>Spray Propiconazole or Hexaconazole fungicide (1ml per litre of water). After a fortnight interval repeat spraying with copper oxychloride fungicide. If there is no water body near by the plants, drenching the plant basins with propiconazole/hexaconazole is also recommended.</p> <p>To keep the plants healthy apply Trichoderma enriched organic manures. Apply lime or dolomite @ 500g/plant. After two weeks apply 250g Rajphose + Potash 250g + Magnesium sulphate 150g + Borax 50g per plant. Reduce the fungus load in plantations by regulating humidity. For this adopt controlled irrigations only.</p>
