Rice	Tillering	Bacterial leaf blight	Spray supernatant solution of cow dung water mixture (Dispense 20g cow dung in 1 L of water and filter the solution through muslin cloth). Place bags containing bleaching powder (2kg/acre) in the paddy fields. If infection is severe, spray Streptocyclin (150g/200 L of water for 1acre of land).
	Seedlings	Stem borer	If attack is seen, apply Chlorantraniliprole 18.5% W/W SC @ 3ml per 10L of water
Coconut	All stages	Rhinoceros beetle Weightson States Dwarf varieties are more vulnerable to the attack.	Take out the beetles from the attacked palm crown using beetle hook. Swab the hole made by the beetles with Bordeaux paste to prevent entry of fungus through the cut surface. Clean the crown and the top most three leaf axils around the spindle may be filled with 250 gm sand which is mixed with 6g ferterra. This should be done thrice in a year ie, during May, September, and January. Keep complete field sanitation.
Ginger	Early growth stage	Bacterial wilt disease Image: State of the s	Use the seed materials which collected from the disease free places only. Dip the planting materials in streptocyclin (200mg/litre) solution for 30 seconds before sowing. Apply lime @ 200 kg per acre of land and thoroughly mix with soil. Use bio control agents, Trichoderma/Pseudomonas. The affected plants if cut and kept in a glass of water, a white thread like bacterial oozing can be seen. Pull out and destroy the affected plants immediately when the disease is noticed. Drench the fields with 1% Bordeaux mixture
