

Agromet Advisory Bulletin for the District, Kasaragod (Valid from 14.03.2023 to 19.03.2023)

(Issued jointly by Kerala Agricultural University Regional Agricultural Research Station Pilicode & India Meteorological Department)

Bulletin Number: Pilicode/Ksd-21/2023 Date:14/03/2023

A.Weather Summary of preceding five days

Rainfall, mm	Max. temp., °C	Min. temp., °C	R. H., %	Wind speed, Km/h
0.0	33.5 - 35.0	20.0 - 24.5	48.0 - 95.5	01 – 03

B.Weather forecast for next five days

Parameters	15-03-2023	16-03-2023	17-03-2023	18-03-2023	19-03-2023
Rainfall, mm	0	0	0	0	0
Max. Temp, °C	36	36	36	36	36
Min. Temp, °C	25	25	25	25	25
Max. Relative Humidity, %	80	80	80	80	80
Min. Relative Humidity, %	40	40	40	40	40
Wind speed, km/h	8	8	8	8	8
Wind direction, degrees	270	270	270	270	270
Total cloud cover, octa	5	5	4	3	5

C. Agrometeorological Advisories

Crop	Stages	Problems	Agro-meteorological advisories		
	- No rannan. Low night temperature and nigh day temperature will be experienced. Hence				
<u>General</u> <u>conditions</u>					
<u>General</u> <u>Recommen</u> <u>dations</u>	Fungal diseases like blight, leaf spots and wilt may spread in crops. Keep vigilance. Take control measures in the beginning stage of diseases. Drought Management:				
	 Give mulches in crop basins to prevent water loss from soil. Adopt drip irrigation. This will minimize the loss of water. Avoid agricultural activities and pesticide application during 12 AM to 3 PM. Restrict the application of chemical fertilizers and poultry manure in un- irrigated areas. Apply lime on tree trunk. Spraying of Sulphate of Potash @ 5 g / L at 15 days interval helps to mitigate drought. Provide Vermicompost or coir pith compost in the basins. Compost has very good water holding capacity 				

	For mulching, the trashes used should be free of any pest and diseases. Avoid the trashes the same species as mulch. This will help to prevent the multiplication of crop specific per and disease causing organisms. Powdering the top soil using a secondary tillage impleme and spreading it uniformly over the field, will help to conserve water for a long period of tim in the fields. Protect young plants by surrounding them with thatched coconut leaves Provide plenty of drinking water to the animals and birds to avoid dehydration during day tim Also frequently sprinkle water on to the body of animals and provide fans in their shelt houses.			
Various crops	Various stages	Sucking pests Sucking pests Sucking pests Sucking Suck	To control the pests apply neem oil emulsion (5 ml. neem oil mixed in one litre of luke warm soap water solution) Or Apply malathion 50 EC @ 2 ml + neem oil 4ml per litre of water	
Banana	All stages	Pseudostem weevil	Ensure field sanitation. Apply EPN infected Cadaver (@ 4 numbers per plant) in the middle whorls of the leaves during 5 th and 6 th months after planting (Cadaver is available at KAU Banana Research Station, Kannara. Contact number: 9605758722)	
Brinjal	Fruiting stage	Fruit and Shoot borer	Keep vigilance. If infestation is noticed, nip off the infected shoots from 3cm below the bore hole. If infestation is severe spray Chlorantraniliprole (Coragen [®]) (@ 3ml per 10 litres of water) after harvesting all about to mature fruits. The next harvesting can be made only after seven days from the spraying.	
Coconut	All stages	Stem bleeding	Reduce the nut load by harvesting all the matured and about to matured nuts Chisel out the affected parts and apply Hexaconazole (Contaf [®]) 5ml/litre solution in the wound. After getting the wound dried, immediately smear the spot with Rubbercoat [®] .	

			Drench the palm basin (2m radius) with Hexaconazole (Contaf [®]), 50ml dissolved in 25 litre of water per palm at monthly intervals, for 5months or till the disease fully disappears. Spread lime thickly in the basins and incorporate with the soil.
Mango	Fruit maturing stage	Mango fruit flies	Keep pheromone traps (2nos/Acre). This can be procured from the College of Agriculture, Padannakkad. (Contact number 0467 - 2280616) Harvest matured mangoes before ripening. Mix cool water and boiling water in equal proportion and dissolve common salt at the rate of one tablespoon per liter of the water mix. Dip the harvested matured mangoes in this warm saline solution for two minutes. After that take out the mangoes, wipe the
			water on them with cotton cloths and keep for ripening.
Arecanut	Bearing palms	Inflorescence die back and button shedding	Warm humid conditions may cause this disease. Spray Hexaconazole (Contaf) 1 ml/litre or Bordeaux mixture 1%. Repeat after 20-25 days.
Animal Husbandry	All stages	Summer Stress	The rise in temperature will affect the thermoregulatory mechanism of dairy cattle. This will cause increase in body temperature, rapid shallow breathing, increased heart rate, profuse salivation, and reduced feed intake. This in turn results in severe production loss and reduced breeding efficiency in dairy cattle.
			Provide pure drinking water to the dairy cattle (45 to 60 litres of water), Allow grazing only during the cooler parts of the day. Provide shading. Shelter them in thatched roofings of minimum 9 ft. height with ample ventilation. Providing fans, misting and fogging assembly in cattle sheds will help them to regulate body temperature. Also ensure minerals fortified feeds.

Poultry and pet birds	Different stages	Summer stress	To combat heat stress, the poultry sheds should be protected from direct sunlight, roofing can be painted white to reflect heat, fans can be fitted, cool water can be sprayed, plenty of clean water can be provided with ice, glucose and 0.1 % sodium bicarbonate, feed offered during the cooler parts of the day can be supplemented with 20% extra vitamins, phosphorous and vitamin C.
