**Agromet Advisory Bulletin**  
**Kozhikode District**  
**(Valid from 30.03.2022 to 04.04.2022)**

## Agromet Advisory Bulletin for the District, Kozhikode

(Valid from 30.03.2022 to 04.04.2022)

(Issued jointly by Kerala Agricultural University Regional Agricultural Research Station Pilicode & India Meteorological Department)

Bulletin Number: Pilicode/Kkd-25/2022

Date: 30/03/2022

### A. Weather Summary of preceding four days

| Rainfall, mm | Max. temp., °C | Min. temp., °C | R. H., %  | Wind speed, Km/h |
|--------------|----------------|----------------|-----------|------------------|
| 1.1          | 34.6-36.4      | 26.8-27.3      | 62.2-84.8 | 00.0-6.0         |

### B. Weather forecast for next five days

| Parameters                | 30-03-2022 | 31-03-2022 | 01-04-2022 | 02-04-2022 | 03-04-2022 |
|---------------------------|------------|------------|------------|------------|------------|
| Rainfall, mm              | 9          | 4          | 2          | 5          | 0.2        |
| Max. Temp, °C             | 36         | 36         | 36         | 36         | 36         |
| Min. Temp, °C             | 27         | 27         | 27         | 27         | 27         |
| Max. Relative Humidity, % | 85         | 85         | 85         | 85         | 85         |
| Min. Relative Humidity, % | 62         | 62         | 62         | 62         | 62         |
| Wind speed, km/h          | 6          | 6          | 6          | 6          | 6          |
| Wind direction, degrees   | 270        | 270        | 290        | 290        | 290        |
| Total cloud cover, octa   | 6          | 6          | 6          | 6          | 5          |

### C. Agrometeorological Advisories

| Crop                      | Stages  | Problems | Agro-meteorological advisories |
|---------------------------|---|----------|--------------------------------|
| <b>General conditions</b> | <b>Isolated light to moderate rainfalls</b>   |          |                                |
|                           | <p>The sky will be cloudy or partially cloudy. High atmospheric temperature and relative humidity will be experienced.</p> <p>Avoid activities in open field conditions during 12 AM to 3 PM.</p> <p>There will be light to moderate rainfalls with lightning in isolated places.</p> |          |                                |

|  |  |  |  |
|--|--|--|--|
| <p><b><u>General Recommendations</u></b></p> | <p>Summer rains have prime role in coping up drought. Hence maximum water harvesting should be ensured in the fields. Clean the rain pits. Cover the soil with dried leaves, especially the basins of crops. The opened tree basins which are partially filled after fertilizer application, can act as very good water harvesting structures. Divert the runoff water to such tree basins by drawing furrows.</p> <p>In rice fallows, organic manure seeds (Daincha, sunhemp, cowpea etc) can be sown during this time. These can be harvested at its 45 days of growth, just before flowering. This will not only help in fixing nitrogen into the soil, but also control the weeds growth in the fields. If there is sufficient soil moisture at the time of harvest, incorporate them into the soil through deep ploughing. Other wise use it for preparation of composts.</p> |  |  |
| <p>Various crops</p>                         | <p>Various stages</p>  | <p style="text-align: center;"><b>Sucking pests</b></p>  <p>The climate is favourable for the spread of sucking pests like mealy bug, jasids, aphids, mites, bugs etc. If not controlled properly they will act as vectors and may spread virus diseases.</p> | <p>To control the pests apply neem oil emulsion (5 ml. neem oil mixed in one litre of luke warm soap water solution)</p> <p style="text-align: center;">Or</p> <p>Apply malathion 50 EC @ 2 ml + neem oil 4ml per litre of water</p> |
| <p>Cucurbit-aceous vegetables</p>            | <p>Flowering and fruit setting stage</p>   | <p style="text-align: center;"><b>Pumpkin beetle</b></p>    | <p>If beetle population is found high, spraying of malathion 50 EC or Dimethoate 30 EC @ 500 ml / ha</p>   |
| <p>Banana</p>                                | <p>Planting stage</p>  | <p>Diseases. which are transmitted through suckers (Kokkan, Bunchy top and Panama wilt) etc</p>  | <p>To avoid the spread of disease select suckers only from healthy plants/fields, only after visiting the fields in person.</p>  |
| <p>Mango</p>                                 | <p>Fruit setting stage</p>   | <p style="text-align: center;"><b>Mango fruit flies</b></p>   | <p>Collect and destroy the fallen fruits by taking deep pits atleast 60 cm depth.</p> <p>Set up pheromone trap (methyl eugenol trap) @ 1 trap/15 cents.</p>  |

|                     |                          |   |   |
|---------------------|--------------------------|---|---|
| Mammalian livestock | Various stages of growth | <p style="text-align: center;">Tick parasites</p>  <p style="text-align: center;">Ticks are the vectors of many severely damaging disease causing organisms like protozoa. Also tick infestation may cause anemia, bloody urine, jaundice etc.</p> | <p>Usually after feeding the ticks fall on the ground and live in small holes in the ground as well as on the walls of the cattle shed. Hence controlled flaming (with dried leaves), the floor and walls of the cattle shed and also the ground where cattle lie outside the shed is advised. At the time of flaming the cattle should be kept temporarily away from the location.</p> <p>Soak cotton clothes in dilute Cypermethrin (1ml per 2 litres of water) solution and wipe the whole body of the cattle once in a week.</p> <p>Spray Cypermethrin (diluted @1ml per litre of water) on the ground and walls of the cattle shed, and also wherever the cattle is sheltered during day time.</p> |
