Max Relative Humidity (%)	80	80	80	80	80	
Min Relative Humidity (%)	45	45	45	50	50	
Wind speed (kmph)	005	005	004	004	004	
Wind direction (deg)	290	290	270	270	250	

Agro Meteorological Advisories

Crop	Stage of the crop /	Advisories				
	Pest/Disease					
Paddy	Aphid	There is a chance of aphid attack in paddy. Spray				
		Imidacloprid 3 milli in 10 litre of water.				
Banana	Sigatoka	Due to the high temperature, there is a chance of sigatoka				
		disease in banana. Spray Pseudomonas 10- 20g per 1 liter of				
		water. In case of severe attack apply SAAF @ 2 g in 1 liter				
		of water.				
Coconut		Burying of fresh or dried coconut husk around the palm is a				
		desirable practice particularly for moisture retention. The				
		husk can be buried either in linear trenches taken 3 m away				
		from the trunk between rows of palms or in circular trenches				
		taken around the palm at a distance of 2 m from the trunk.				
		The trenches may be of 0.5 m width and depth. The husks				
		are to be placed in layers with concave surface facing				
		upwards and covered with soil. The beneficial effect of husk				
		burial will last for about 5-7 years. Instead of husk, coconut				
		pith can be buried @ 25 kg / palm / year.
