AGRO-METEOROLOGICAL ADVISORIES:

GRO-METEOROLOGICAL ADVISORIES:				
Crop	Pest/ Disease	Advisories		
Paddy	Land preparation to transplanting	Transplant seedlings at 4-5 leaf stage. Soak seed for 30 minutes in a solution of <i>Pseudomonas</i> culture @10g/litre per kg of seeds. The above seed treatment can also be used to control sheath blight, sheath rot, leaf spot disease etc.		
Coconut	Bud rot Bud rot in rainy season. Keep three numbers each perforated Mancozeb sachets (5 gm) around spindle leaves as a prophylac measure against bud rot.			
Pepper	Foot rot	There is a chance of foot rot disease due to high relative humidity. Add 2 kg Trichoderma to a mixture of 90 kg FYM and 10 kg Neemcake and kept for two weeks with sufficient moisture. Add 2.5 kg of this mixture to each matured vine to control foot rot of pepper.		
Vegetables	Downy mildew	There is a chance of downy mildew attack in vegetables due to the onset of south west monsoon. Application of 2g m,curzate M-8 or Trichoderma 20g/litre under the leaves in 15 days interval is effective.
