Wind speed (kmph)	008	010	012	012	012
Wind direction (deg)	270	270	270	270	270

Agro Meteorological Advisories:

Crop	Stage of the crop / Pest/Disease	Advisories
Paddy (Jyothi, Kanchana)	Seedling stage	Due to high relative humidity, there is a chance of sheath blight, sheath rot, leaf spot diseases in paddy. These diseases can be controlled to an extent by dipping the roots of seedling in pseudomonas solution by mixing 20 g pseudomonas culture in one liter of water for 30 minutes while transplanting.
Coconut	Root wilt	Root wilt disease is seen in coconut. These coconut palms can be recovered by better management such as application of fertilizers, usage of high yielding resistant varieties instead of severely affected palms.
Pepper	Quick wilt	There is a chance of Quick wilt disease due to high relative humidity. Apply trichoderma or pseudomonas culture in soil or 1% Bordeaux mixture can be sprayed on the leaves and small branches.
Vegetables	White fly	Hang yellow boards dipped in castor oil in the field.
