

P.G & Ph.D PROGRAMMES
(FACULTY OF AGRICULTURE)

*Revised Syllabi of Post
Graduate Programmes*

2022

**KERALA AGRICULTURAL
UNIVERSITY**

CONTENT

Sl No	SYLLABUS OF POSTGRADUATE AND Ph.D. PROGRAMMES	PAGE NO
1.	AGRONOMY	1 - 36
2.	SOIL SCIENCE	37 – 77
3.	AGRICULTURAL METEOROLOGY	78 – 1119
4.	GENETICS AND PLANT BREEDING	120 – 189
5.	SEED SCIENCE AND TECHNOLOGY	190 – 240
6.	ENTOMOLOGY	241 – 300
7.	PLANT PATHOLOGY	301 – 337
8.	NEMATOLOGY	338 – 370
9.	FRUIT SCIENCE	371 – 422
10.	VEGETABLE SCIENCE	423 – 487
11.	FLORICULTURE AND LANDSCAPING	488 – 539
12.	PLANTATION, SPICES, MEDICINAL AND AROMATIC CROPS	540 – 604
13.	POSTHARVEST MANAGEMENT	605 – 654
14.	MICROBIOLOGY	655 – 702
15.	PLANT PHYSIOLOGY	703 – 823
16.	MOLECULAR BIOLOGY AND BIOTECHNOLOGY	824 – 852
17.	AGRICULTURAL EXTENSION EDUCATION	853 – 954
18.	AGRICULTURAL ECONOMICS	955 – 1003
19.	COMMUNITY SCIENCE (FOOD AND NUTRITION)	1004 – 1067
20.	AGRICULTURAL STATISTICS	1068 – 1110
21.	COMMON COURSES FOR PG PROGRAMMES	1111 – 1115

KERALA AGRICULTURAL UNIVERSITY

**RESTRUCTURED AND REVISED SYLLABUS
FOR P.G. AND Ph.D. PROGRAMMES**

AGRONOMY

Course Title with Credit Load for M.Sc. and Ph D in Agronomy

Course Code	Course title	Credit hours
Agron. 501*	Modern Concepts in Crop Production	3 + 0
Agron. 502*	Principles and Practices of Soil Fertility and Nutrient Management	2 + 1
Agron. 503*	Principles and Practices of Weed Management	2 + 1
Agron. 504*	Principles and Practices of Water Management	2 + 1
Agron. 505	Conservation Agriculture	1 + 1
Agron. 506	Agronomy of Major Cereals and Pulses	2 + 1
Agron. 507	Agronomy of Oilseed, Fibre and Sugar Crops	2 + 1
Agron. 508	Agronomy of Medicinal, Aromatic and Underutilized Crops	2 + 1
Agron. 509	Agronomy of Fodder and Forage crops	2 + 1
Agron. 510	Agrostology and Agro-forestry	2 + 1
Agron. 511	Cropping System and Sustainable Agriculture	2 + 0
Agron. 512	Dryland Farming and Watershed Management	2 + 1
Agron. 513	Principles and Practices of Organic Farming	2 + 1
Agron. 550	Master's Seminar	1 + 0
Agron. 560	Master's Research	30
Agron. 601**	Current Trends in Agronomy	3 + 0
Agron. 602	Recent Trends in Crop Growth and Productivity	2 + 1
Agron. 603	Irrigation Management	2 + 1
Agron. 604	Recent Trends in Weed Management	2 + 0
Agron. 605	Integrated Farming Systems for Sustainable Agriculture	2 + 0
Agron. 606	Soil Conservation and Watershed Management	2 + 1
Agron. 607	Stress Crop Production	2 + 1
Agron. 608**	Research and Publication Ethics	2 + 0
Agron. 691	Doctoral Seminar – I	1 + 0
Agron. 692	Doctoral Seminar – II	1 + 0
Agron. 699	Doctoral Research	75

* Compulsory for Master's Programme

** Compulsory for Ph D Programme

- I. Course title : **Modern Concepts in Crop Production**
II. Course code : **Agron. 501**
III. Credit hours : **3 + 0**
IV. Aim of the course : To teach the basic concepts of soil management and crop production

Theory

Unit I

Crop growth analysis in relation to environment; geo-ecological zones of India.

Unit II

Quantitative agro-biological principles and inverse yield nitrogen law; Mitscherlich yield equation, its interpretation and applicability; Baule unit.

Unit III

Effect of lodging in cereals; physiology of grain yield in cereals; optimization of plant population and planting geometry in relation to different resources, concept of ideal plant type and crop modeling for desired crop yield.

Unit IV

Scientific principles of crop production; crop response production functions; concept of soil plant relations; yield and environmental stress, use of growth hormones and regulators for better adaptation in stressed condition.

Unit V

Integrated farming systems, organic farming, and resource conservation technology including modern concept of tillage; dry farming; determining the nutrient needs for yield potentiality of crop plants, concept of balanced nutrition and integrated nutrient management; precision agriculture. Modern crop production concepts: soil less cultivation, Aeroponics, Hydroponics, Robotics and terrace farming. use of GIS, GPS and remote sensing in modern agriculture, precision farming and protected agriculture.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments and class discussion

Learning outcome

Basic knowledge on soil management and crop production

Suggested Reading

- I. Course title : **Principles and Practices of Soil Fertility and Nutrient Management**
- II. Course code : **Agron. 502**
- III. Credit hours : **2 + 1**
- IV. Aim of the course : To impart knowledge about fertilizers and manures as sources of plant nutrients and appraise about the integrated approach of plant nutrition and sustainability of soil fertility.

Theory

Unit I

Soil fertility and productivity - factors affecting; features of good soil management; problems of supply and availability of nutrients; relation between nutrient supply and crop growth; organic farming - basic concepts and definitions.

Unit II

Criteria of essentiality of nutrients; Essential plant nutrients – their functions, nutrient deficiency symptoms; transformation and dynamics of major plant nutrients.

Unit III

Preparation and use of farmyard manure, compost, green manures, vermicompost, biofertilizers and other organic concentrates their composition, availability and crop responses; recycling of organic wastes and residue management. Soil less cultivation.

Unit IV

Commercial fertilizers; composition, relative fertilizer value and cost; crop response to different nutrients, residual effects and fertilizer use efficiency; agronomic and physiological, fertilizer mixtures and grades; methods of increasing fertilizer use efficiency; nutrient interactions.

Unit V

Time and methods of manures and fertilizers application; foliar application and its concept; relative performance of organic and inorganic nutrients; Fertigation – definition, importance, components/ equipments, nutrient use efficiency and economics - fertigation schedule for major crops; economics of fertilizer use; integrated nutrient management.

Practical

- Determination of soil pH and soil EC
- Determination of soil organic C
- Determination of available N, P, K and S of soil
- Determination of total N, P, K and S of soil
- Determination of total N, P, K, S in plant
- Computation of optimum and economic yield
- Field visit to familiarise with the components and working of fertigation unit

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments and class discussion

Learning outcome

Basic knowledge on soil fertility and management.

Suggested Reading

- Brady, N. C. and Weil, R. R. 2002. *The Nature and Properties of Soils*. 13th Ed. Pearson Edu.
- Fageria, N. K., Baligar, V. C., and Jones, C. A. 1991. *Growth and Mineral Nutrition of Field Crops*. Marcel Dekker.

- Prasad, R. and Power, J. F. 1997. *Soil Fertility Management for Sustainable Agriculture*. CRC Press.
- Yawalkar, K. S., Agrawal, J. P., and Bokde, S. 2000. *Manures and Fertilizers*. Agri-Horti Pub

- I. Course title : **Principles and Practices of Weed Management**
- II. Course code : **Agron. 503**
- III. Credit hours : **2 + 1**
- IV. Aim of the course : To familiarize the students about weeds, herbicides and methods of weed management

Theory

Unit I

Weed biology, ecology and classification, crop-weed competition including

allelopathy; principles of weed control, classification of weed management techniques; weed indices, weed shift in different eco-systems

Unit II

Herbicides introduction and history of their development; classification based on chemical, physiological, methods of application and selectivity; mode and mechanism of action of herbicides.

Unit III

Herbicide structure - activity relationship; factors affecting the efficiency of herbicides; herbicide formulations, herbicide mixtures, sequential application of herbicides, rotation; weed control through use of nano-herbicides and bio-herbicides, myco-herbicides bio-agents, and allelochemicals; movement of herbicides in soil and plant, Degradation of herbicides in soil and plants; herbicide resistance, residue, persistence and management; development of herbicide resistance in weeds and crops and their management, herbicide combination and rotation.

Unit IV

Weed management in major crops and cropping systems; alien, invasive and parasitic weeds and their management; weed shifts in cropping systems; aquatic and perennial weed control; weed control in non-crop area.

Unit V

Integrated weed management; recent development in weed management- robotics, use of drones and aeroplanes, weed management in organic systems, etc., cost: benefit analysis of weed management.

Practical

- Identification of important weeds of different crops
- Preparation of a weed herbarium
- Weed survey in crops and cropping systems
- Crop-weed competition studies
- Weed indices calculation and interpretation with data
- Preparation of spray solutions of herbicides for high and low-volume sprayers
- Use of various types of spray pumps and nozzles and calculation of swath width
- Economics of weed control
- Herbicide residue analysis in plant and soil
- Bioassay of herbicide residues
- Calculation of herbicide requirement

Teaching methods / activities

Classroom teaching with AV aids, group discussion, field visit to identify weeds

Learning outcome

Basic knowledge on weed identification and control for crop production.

Suggested Reading

- I. Course title : **Principles and Practices of Water Management**
- II. Course code : **Agron. 504**
- III. Credit hours : **2 + 1**
- IV. Aim of the course : To teach the principles of water management and practices to enhance the water productivity

Theory

Unit I

Water and its role in plants; Irrigation: Definition and objectives, water resources and irrigation development in India and Kerala, major irrigation projects, extent of area and crops irrigated in India and in different states.

Unit II

Field water cycle, water movement in soil and plants; transpiration; soil-water-plant relationships; water absorption by plants; plant response to water stress, crop plant adaptation to moisture stress condition. Water availability and its relationship with nutrient availability and losses.

Unit III

Soil, plant and meteorological factors determining water needs of crops, scheduling,

depth and methods of irrigation; micro irrigation systems; deficit irrigation; fertigation; management of water in controlled environments and polyhouses. Irrigation efficiency and water use efficiency.

Unit IV

Water management of crop and cropping system, Quality of irrigation water and management of saline water for irrigation, Crop water requirement- estimation of ET and effective rainfall; Water management of the major crops and cropping systems. Automated irrigation system.

Unit V

Excess soil water and plant growth; water management in problem soils, drainage requirement of crops and methods of field drainage, their layout and spacing; rain water management and its utilization for crop production.

Unit VI

Quality of irrigation water and management of saline water for irrigation, water management in problem soils

Unit VII

Soil moisture conservation, water harvesting, rain water management and its utilization for crop production.

Unit VIII

Hydroponics.

Unit IX

Water management of crops under climate change scenario.

Practical

- Determination of field capacity by field method
- Determination of permanent wilting point by sunflower pot culture technique
- Determination of field capacity and permanent wilting point by Pressure Plate Apparatus
- Determination of Hygroscopic Coefficient
- Determination of maximum water holding capacity of soil
- Measurement of matric potential using gauge and mercury type tensiometer
- Determination of soil-moisture characteristic curves
- Determination of saturated hydraulic conductivity by constant and falling head method
- Determination of hydraulic conductivity of saturated soil below the water table by auger hole method
- Measurement of soil water diffusivity
- Estimation of unsaturated hydraulic conductivity
- Estimation of upward flux of water using tensiometer and from depth to ground water table

- Determination of irrigation requirement of crops (calculations)
- Determination of effective rainfall (calculations)
- Determination of ET of crops by soil moisture depletion method
- Determination of water requirement of crops
- Measurement of irrigation water by volume and velocity-area method
- Measurement of irrigation water by measuring devices and calculation of irrigation efficiency
- Determination of infiltration rate by double ring infiltrometer

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments and field visit.

Learning outcome

Basic knowledge on water management for optimization of crop yield.

- I. Course title : **Conservation Agriculture**
- II. Course code : **Agron. 505**
- III. Credit hours : **1 + 1**
- IV. Aim of the course : To impart knowledge of conservation of agriculture for economic development

Theory

Unit I

Conventional and conservation agriculture systems, sustainability concerns, conservation agriculture: Historical background and present concept, global experiences, present status in India.

Unit II

Nutrient management in CA, water management, weed management, energy use, insect-pest and disease management, farm machinery, crop residue management, cover crop management.

Unit III

Climate change mitigation and CA, C-sequestration, soil health management, soil microbes and CA.

Unit IV

CA in agroforestry systems, rainfed / dryland regions

Unit V

Economic considerations in CA, adoption and constraints, prospects of CA in future agriculture

Practicals

- Study of experiments/long-term experiments on CA,
- Evaluation of soil health parameters,
- Estimation of C-sequestration,
- Machinery calibration for sowing different crops, weed seedbank estimation under CA, energy requirements, economic analysis of CA.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

Learning outcome

Experience on the knowledge of various types of conservation agriculture.

- Reddy, T. Y. and Reddy, G. H. S. 1992. *Principles of Agronomy*. Kalyani.

- I. Course title : **Agronomy of Major Cereals and Pulses**
- II. Course code : **Agron. 506**
- III. Credit hours : **2 + 1**
- IV. Aim of the course : To impart knowledge about crop husbandry of cereals and pulses

Theory

Origin and history, area and production, classification, improved varieties, adaptability, climate, soil, water and cultural requirements, nutrition, quality components, handling and processing of the produce for maximum production of:

Unit I : *Rabi* cereals.

Unit II : *Kharif* cereals.

Unit III : *Rabi* pulses.

Unit IV : *Kharif* pulses.

Practical

- Phenological studies at different growth stages of crop
- Estimation of crop yield on the basis of yield attributes
- Formulation of cropping schemes for various farm sizes and calculation of cropping and rotational intensities
- Working out growth indices (CGR, RGR, NAR, LAI, LAD, LAR, LWR, SLA, SLW etc)
- Assessment of land use and yield advantage (Rotational intensity, Cropping intensity, Diversity Index, Sustainable Yield Index, Crop Equivalent Yield, Land Equivalent ratio, Aggressiveness, Relative Crowding Coefficient, Competition Ratio and ATER etc)
- Estimation of protein content in pulses
- Planning and layout of field experiments
- Judging of physiological maturity in different crops
- Intercultural operations in different crops
- Determination of cost of cultivation of different crops
- Working out harvest index of various crops
- Study of seed production techniques in selected crops
- Visit of field experiments on cultural, fertilizer, weed control and water management aspects

- Visit to nearby areas for identification of constraints in crop production

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments and class discussion.

Learning outcome

Basic knowledge on cereals and pulse growing in the State and country.

- I. Course title : **Agronomy of Oilseed, Fibre and Sugar Crops**
- II. Course code : **Agron. 507**
- III. Credit hours : **2 + 1**
- IV. Aim of the course : To impart knowledge about crop husbandry of oilseeds, fibre crops and sugar yielding crops.

Theory

Origin and history, area and production, classification, improved varieties, adaptability, climate, soil, water and cultural requirements, nutrition, quality component, handling and processing of the produce for maximum production of:

Unit I

Rabi oilseeds - rapeseed and mustard, linseed and niger.

Unit II

Kharif oilseeds - groundnut, sesame, castor, sunflower, soybean and safflower.

Unit III

Fiber crops - cotton, jute, ramie and mesta.

Unit IV

Sugar crops - sugar-beet and sugarcane.

Practical

- Planning and layout of field experiments
- Cutting of sugarcane setts, its treatment and methods of sowing, tying and propping of sugarcane
- Determination of cane maturity and calculation on purity percentage, recovery percentage and sucrose content in cane juice phenological studies at different growth stages of crop
- Intercultural operations in different crops
- Cotton seed treatment
- Working out growth indices (CGR, RGR, NAR, LAI, LAD, LAR, LWR, SLA, SLW)
- Assessment of land use and yield advantage (Rotational intensity, Cropping intensity, Diversity Index, Sustainable Yield Index Crop Equivalent Yield, Land Equivalent ratio, Aggressiveness, Relative Crowding Coefficient, Competition Ratio and ATER)
- Judging of physiological maturity in different crops and working out harvest index
- Working out cost of cultivation of different crops
- Estimation of crop yield on the basis of yield attributes
- Formulation of cropping schemes for various farm sizes and calculation of cropping and rotational intensities
- Determination of oil content in oilseeds and computation of oil yield
- Estimation of quality of fibre of different fibre crops
- Study of seed production techniques in various crops
- Visit of field experiments on cultural, fertilizer, weed control and water management aspects
- Visit to nearby villages for identification of constraints in crop production

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments and class discussion

Learning outcome

Basic knowledge on production of oilseed, sugar and fibre crops.

Suggested Reading

- I. Course title : **Agronomy of Medicinal, Aromatic and Underutilized Crops**
- II. Course code : **Agron. 508**
- III. Credit hours : **2 + 1**
- IV. Aim of the course : To acquaint the students with different medicinal, aromatic and underutilized field crops, their package of practices and processing

Theory

Unit I

Importance of medicinal and aromatic plants in human health, national economy and related industries, classification of medicinal and aromatic plants according to botanical characteristics and their uses, export potential and indigenous technical knowledge.

Unit II

Climate and soil requirements; cultural practices; yield and important constituents of medicinal plants (*Kacholam*, Sida, Indian long pepper, *Rauwolfia*, *Aloe vera*, *Satavar*, *Stevia*, *Chethikoduveli*, safed musli, kalmegh, asafoetida, *Nuxvomica*, etc).

Unit III

Climate and soil requirements; cultural practices; yield and important constituents of aromatic plants (citronella, palmarosa, mentha, basil, lemon grass, patchouli).

Unit IV

Climate and soil requirements; cultural practices; yield of under-utilized crops (rice bean, lathyrus, Sesbania, clusterbean, fenugreek, tobacco, betel vine, mango ginger, arrow root, grain amaranth, chia).

Unit V

Post harvest handling –drawing, processing, grading, packing and storage, value addition and quality standards in herbal products.

Practical

- Identification of crops based on morphological and seed characteristics
- Raising of herbarium of medicinal, aromatic and under-utilized plants
- Quality characters in medicinal and aromatic plants

- Methods of analysis of essential oil and other chemicals of importance in medicinal and aromatic plants.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments and field visit

Learning outcome

Acquaintance with various medicinal and aromatic plants and their commercial base for developing entrepreneurship.

I. Course title : **Agronomy of Fodder and Forage Crops**

II. Course code : **Agron. 509**

III. Credit hours : **2 + 1**

IV. Aim of the course : To teach the crop husbandry of different forage and fodder crops along with their processing.

Theory

Unit I

Adaptation, distribution, varietal improvement, agro-techniques and quality aspects including anti-quality factors of important fodder crops like sorghum, maize, *bajra*, *guar*, cowpea, rice bean, subabul, desmanthes, stylo, oats, barley, berseem, *senji*, lucerne, etc.

Unit II

Adaptation, distribution, varietal improvement, agro-techniques and quality aspects including anti-quality factors of important forage crops/grasses, - Guinea grass, Napier grass, *Cenchrus*, congo signal, signal, gamba, setaria, para, deenanath, etc.

Unit III

Year-round fodder production and management, intercropping fodder crops in coconut garden, preservation and utilization of forage and pasture crops

Unit IV

Principles and methods of hay and silage making; chemical and biochemical changes, nutrient losses and factors affecting quality of hay and silage; use of physical and chemical enrichments and biological methods for improving nutrition; value addition of poor quality fodder. Fodder production through hydroponics. Azolla cultivation.

Unit V

Economics of forage cultivation uses and seed production techniques of important fodder crops.

Practical

- Practical training of farm operations in raising fodder crops;
- Canopy measurement, yield, Leaf: Stem ratio and quality estimation, viz., crude protein, NDF, ADF, lignin, silica, cellulose and IVDMD, etc. of various fodder and forage crops
- Anti-quality components like HCN in sorghum and such factors in other crops
- Hay and silage making and economics of their preparation.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments and field visit

Learning outcome

Acquaintance with various fodder and forage crops and their commercial base for developing entrepreneurship.

Suggested Reading

- I. Course title : **Agrostology and Agro-forestry**
- II. Course code : **Agron. 510**
- III. Credit hours : **2 + 1**
- IV. Aim of the course : To teach the crop husbandry of different forage, fodder and agroforestry crops / trees along with their processing.

Theory

Unit I

Agrostology: definition and importance; principles of grassland ecology: grassland ecology – community, climax, dominant species, succession, biotype, ecological status of grasslands in India, grass cover of India; problems and management of grasslands.

Unit II

Importance, classification (various criteria), scope, status and research needs of pastures; pasture establishment, their improvement and renovation-natural pastures, cultivated pastures; common pasture grasses.

Unit III

Agroforestry: definition and importance; agroforestry systems, agrisilviculture, silvipasture, agrisilvipasture, agrihorticulture, aquasilviculture, alley cropping and energy plantation.

Unit IV

Crop production technology in agro-forestry and agrostology system; silvipastoral system: meaning and importance for wasteland devt.; selection of species, planting methods and problems of seed germination in agro-forestry systems; irrigation and manuring in agro-forestry ping and coppicing in agro- forestry systems; social acceptability and economic viability, nutritive value of trees; tender operation; desirable tree characteristics.

Practical

- Preparation of charts and maps of India showing different types of pastures and agro-forestry systems
- Identification of seeds and plants of common grasses, legumes and trees of economic importance with reference to agro-forestry
- Seed treatment for better germination of farm vegetation
- Methods of propagation/ planting of grasses and trees in silvipastoral system
- Fertilizer application in strip and silvipastoral systems
- After-care of plantation
- Estimation of protein content in loppings of important fodder trees
- Estimation of calorie value of wood of important fuel trees
- Estimation of total biomass and fuel wood
- Economics of agro-forestry

- Visit to important agro-forestry research stations

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments and field visit.

Learning outcome

Basic knowledge on agroforestry, forage crops and their utility.

Suggested Reading

I.	Course title	: Cropping System and Sustainable Agriculture
II.	Course code	: Agron. 511
III.	Credit hours	: 2 + 0
IV.	Aim of the course	: To acquaint the students with the prevailing cropping systems and practices in the country and measures to improve their productivity.

Theory

Unit I

Cropping systems: definition, indices and its importance; physical resources, soil and water management in cropping systems; assessment of land use.

Unit II

Concept of sustainability in cropping systems and farming systems, scope and objectives; production potential under monoculture cropping, multiple cropping, alley cropping, sequential cropping and intercropping, mechanism of yield advantage in intercropping systems.

Unit III

Above and below ground interactions and allelopathic effects; competition relations; multi-storied cropping and yield stability in intercropping, role of non-monetary inputs and low cost technologies.

Unit IV

Sustainable agriculture – definition, pillars; Crop diversification for sustainability; role of organic matter in maintenance of soil fertility; crop residue management; fertilizer use efficiency and concept of fertilizer use in intensive cropping system. Research need on sustainable agriculture. Advanced nutritional tools for big data analysis and interpretation.

Unit V

Wetland – definition, conservation and cropping systems. Plant ideotypes for drylands and wetlands

Unit VI

Artificial Intelligence- concept and application in cropping systems.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments.

Learning outcome

Basic knowledge on cropping system for sustainable agriculture.

Suggested Reading

I.	Course title	: Dryland Farming and Watershed Management
II.	Course code	: Agron. 512
III.	Credit hours	: 2 + 1
IV.	Aim of the course	: To teach the basic concepts and practices of dryland farming and soil moisture conservation.

Theory

Unit I

Definition, concept and characteristics of dryland farming; dryland versus rainfed farming; significance and dimensions of dryland farming in Indian agriculture. Agencies and programmes in dryland agriculture in India.

Unit II

Soil and climatic parameters with special emphasis on rainfall characteristics; constraints limiting crop production in dryland areas; types of drought, characterization of environment for water availability; crop planning for erratic and aberrant weather conditions.

Unit III

Stress physiology and resistance to drought, adaptation of crop plants to drought, drought management strategies; preparation of appropriate crop plans for dryland areas; mid contingent plan for aberrant weather conditions.

Unit IV

Tillage, tillage, frequency and depth of cultivation, compaction in soil tillage; concept of conservation tillage; tillage in relation to weed control and moisture conservation; techniques and practices of soil moisture conservation (use of mulches, kinds, effectiveness and economics); antitranspirants; soil and crop management techniques, seeding and efficient fertilizer use. Measures to enhance water use efficiency in dryland crops.

Unit V

Concept of watershed, resource management, problems, approach and components.

Practical

- Method of seed priming
- Determination of moisture content on germination of important dryland crops
- Determination of relative water content and saturation deficit of leaf
- Moisture stress effects and recovery behaviour of important crops
- Estimation of Potential ET by Thornthwaite method
- Estimation of Reference ET by Penman Montieth Method
- Classification of climate by Thornthwaite method (based on moisture index, humidity index and aridity index)
- Classification of climate by Koppen Method
- Estimation of water balance by Thornthwaite method
- Estimation of water balance by FAO method
- Assessment of drought
- Estimation of length of growing period
- Estimation of probability of rain and crop planning for different drought condition
- Spray of anti-transpirants and their effect on crops
- Water use efficiency
- Visit to dryland research stations and watershed projects

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments.

Learning outcome

Basic knowledge on dryland farming and soil moisture conservation.

I.	Course title	: Principles and Practices of Organic Farming
II.	Course code	: Agron. 513
III.	Credit hours	: 2 + 1
IV.	Aim of the course	: To study the principles and practices of organic farming for sustainable crop production.

Theory

Unit I

Organic farming - concept and definition, its relevance to India and global agriculture and future prospects; principles of organic agriculture; organics and farming standards; organic farming and sustainable agriculture; selection and conversion of land, soil and water management - land use, conservation tillage; shelter zones,

hedges, pasture management, agro-forestry.

Unit II

Organic farming and water use efficiency; soil fertility, nutrient recycling, organic residues, organic manures, composting, soil biota and decomposition of organic residues, earthworms and vermicompost, green manures, bio-fertilizers and biogas technology.

Unit III

Farming systems, selection of crops and crop rotations, multiple and relay cropping systems, intercropping in relation to maintenance of soil productivity.

Unit IV

Control of weeds, diseases and insect pest management, biological agents and pheromones, bio-pesticides.

Unit V

Socio-economic impacts; marketing and export potential: inspection, certification, labeling and accreditation procedures; organic farming and national economy.

Practical

- Method of making compost by aerobic method
- Method of making compost by anaerobic method
- Method of making vermicompost
- Identification and nursery raising of important agro-forestry trees and tree shelter belts
- Efficient use of biofertilizers, technique of treating legume seeds with *Rhizobium* cultures, use of *Azotobacter*, *Azospirillum*, and PSB cultures in field
- Visit to a biogas plant
- Visit to an organic farm
- Quality standards, inspection, certification and labeling and accreditation procedures for farm produce from organic farms of entrepreneurship on organic inputs.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments, exposure visit.

Learning outcome

Basic knowledge on organic farming for sustainable agriculture and development.

I.	Course title	: Current Trends in Agronomy
II.	Course code	: Agron. 601
III.	Credit hours	: 3 + 0
IV.	Aim of the course	: To acquaint the students with the recent advances in agricultural production.

Theory

Unit I

Agro-physiological basis of variation in yield, recent advances in soil plant-water relationship.

Unit II

Globalization of agriculture and WTO, precision agriculture, contract farming, organic farming, marketing and export potential of organic products, certification, labeling and accreditation procedures and ITK in farming.

Unit III

Crop residue management in multiple cropping systems; latest developments in plant management; Mechanization in crop production: modern agricultural precision tools and technologies, weed management, cropping systems, grassland management, agro-forestry, allelopathy.

Unit IV

GIS, GPS and remote sensing for crop management, global warming, GM crops, seed production technology; seed certification, seed multiplication, hybrid seed production etc.

Unit V

Concepts of system agriculture; holistic approach of farming systems, dryland farming, sustainable agriculture and research methodology in Agronomy. Conservation agriculture, principles, prospects and importance, potential benefits of CA under climate change scenario, policy issues.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

Learning outcome

Recent advances in agricultural production.

- I. Course title : **Recent Trends in Crop Growth and Productivity**
- II. Course code : **Agron. 602**
- III. Credit hours : **2 + 1**

- IV. Aim of the course : To study the physiology of vegetative and reproductive growth in relation to productivity of different crops under various environments.

Theory

Unit I

Plant density and crop productivity; plant and environmental factors, yield, plant distribution, strategies for maximizing solar energy utilization; leaf area; interception of solar radiation and crop growth; photosynthesis: the photosynthetic apparatus, factors essential for photosynthesis; difference in photosynthetic rates among and within species; physiological limitations to crop yield; solar radiation concept and agro-techniques for harvesting solar radiation.

Unit II

Growth analysis: concept, CGR, RGR, NAR, LAI, LAD, LAR; validity and Limitations in interpreting crop growth and development; growth curves: sigmoid, polynomial and asymptotic; root systems; root-shoot relationship; principles involved in inter and mixed cropping systems under rainfed and irrigated conditions; concept and differentiation of inter and mixed cropping; criteria in assessing the yield advantages.

Unit III

Competitive relationship and competition functions; biological and agronomic basis of yield advantage under intercropping; physiological principles of dryland crop production, constraints and remedial measures; heat unit concept of crop maturity: concept and types of heat units.

Unit IV

Concept of plant ideotypes: crop physiological and new ideotypes; characteristics of ideotype for wheat, rice, maize, etc.; concept and types of growth hormones; their role in field crop production; efficient use of resources.

Practical

- Field measurement of root-shoot relationship in crops at different growth stages
- Estimation of growth evaluating parameters like CGR, RGR, NAR, LAI etc., at different stages of crop growth
- Computation of harvest index of various crops
- Assessment of crop yield on the basis of yield attributing characters
- Construction of crop growth curves based on growth analysis data
- Computation of competition functions, viz. LER, IER aggressivity competition index, etc
- Senescence and abscission indices
- Analysis of productivity trend in un-irrigated areas
- Analysis of productivity trend in irrigated areas

Teaching methods / activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

Learning outcome

Experience on the knowledge of crop growth for agricultural production.

I.	Course title	: Irrigation Management
II.	Course code	: Agron. 603
III.	Credit hours	: 2 + 1
IV.	Aim of the course	: To teach the students about optimization of irrigation in different crops under variable agro-climatic conditions.

Theory

Unit I

Global water resources; Water resources of India, irrigation projects during pre and post independence period and their significance in crop production; irrigation needs, atmospheric, soil, agronomic, plant and water factors affecting irrigation need; water deficits and crop growth.

Unit II

Movement of water in soil-water movement under saturated and unsaturated conditions, Poiseuille's and Darcy's law, general equation of saturated and unsaturated flow of water in soil. Soil-plant-water relationships, evaporation, transpiration and evapo-transpiration, significance of transpiration, energy utilization in transpiration, physiological processes and crop productivity.

Unit III

Water requirement, irrigation needs, factors affecting irrigation need; water use efficiency, Infiltration; water movement under saturated and unsaturated conditions; management practices for improving water use efficiency of crops.

Unit IV

Soil and plant water potential, SPAC, transpiration and evapo-transpiration, significance of transpiration, energy utilization in transpiration, factors affecting ET, control of ET by mulching and use of anti-transpirants; fertilizer use in relation to irrigation.

Unit V

Crop water stress – water deficits and crop growth, adoptability of crops. Water availability in relation to nutrient availability.

Unit VI

Application of irrigation water, conveyance and distribution system, irrigation efficiency; agronomic considerations in the design and operation of irrigation projects; characteristics of irrigation and farming systems affecting irrigation management.

Unit VII

Strategies of using limited water supply; factors affecting ET, control of ET by mulching and use of anti-transpirants; fertilizer use in relation to irrigation; optimizing the use of given irrigation supplies.

Unit VIII

Land suitability for irrigation, land irrigability classification; integrated water management in command areas, institution of water management in commands, farmer's participation in command areas; irrigation legislation.

Unit IX

Economic analysis of irrigation and crop planning for optimum use of irrigation water

Unit X

Crop water production function

Practical

- Determination of water infiltration characteristics and water holding capacity of soil profiles.
- Determination Moisture extraction pattern of crops
- Determination of water balance component of transplanted rice by drum culture technique
- Determination of consumptive use and water requirement of a given cropping pattern
- Determination of crop efficient of one important crop
- Planning, designing and installation of drip irrigation system
- Planning, designing and installation of sprinkler irrigation system
- Designing of drainage channel

- Measurement of irrigation efficiencies
- Determination of irrigation timing under different methods of irrigation
- Visit to irrigation command area

Teaching methods / activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

Learning outcome

Management of irrigation water for sustainable agriculture.

Suggested Reading

I.	Course title	: Recent Trends in Weed Management
II.	Course code	: Agron. 604
III.	Credit hours	: 2 + 0
IV.	Aim of the course	: To teach the students about the changing weed flora, new herbicides, their resistance, toxicity, antidotes and residue management under different cropping systems.

Theory

Unit I

Crop-weed competition in different cropping situations; changes in weed flora, various causes and effects; different methods of weed management. Migration, introduction, adaptation of weeds, Invasive weeds – biology and management. Different mechanisms of invasion – present status and factors influencing weed invasion.

Unit II

Physiological and biological aspects of herbicides, their absorption, translocation, metabolism and mode of action; selectivity of herbicides and factors affecting them.

Unit III

Climatic factors and phytotoxicity of herbicides; fate of herbicides in soil and factors affecting them, Degradation of herbicides in soil and plants- factors affecting it, primary and secondary metabolites, residue management of herbicides, adjuvants.

Unit IV

Advances in herbicide products and application techniques and methods; use of drones; herbicide resistance; antidotes and crop protection compatibility of herbicides of different groups; compatibility of herbicides with other pesticides; herbicide rotation and herbicide mixtures.

Unit V

Development of transgenic herbicide resistant crops; herbicide development, registration procedures.

Unit VI

Relationship of herbicides with tillage, fertilizer, and irrigation, cropping system; bioherbicides, allelochemical and alleloherbicides, herbicide bioassays. Recent advances in nonchemical weed management including deleterious rhizobacteria, robotics, biodegradable film, etc.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

Learning outcome

Experience on the knowledge of new herbicides, their resistance, toxicity, antidotes and residue management under different cropping systems.

- I. Course title : **Integrated Farming Systems for Sustainable Agriculture**
- II. Course code : **Agron. 605**
- III. Credit hours : **2 + 0**
- IV. Aim of the course : To appraise about different enterprises suitable for different agro-climatic conditions for sustainable agriculture.

Theory

Unit I

Integrated Farming systems (IFS): definition, scope and importance; classification of IFS based on enterprises as well as under rainfed/irrigated condition in different land situation. farming systems according to type of rotation, intensity of rotation, degree of commercialization, water supply, enterprises.

Unit II

Concept of sustainability in of Integrated farming systems; efficient Integrated farming systems based on economic viability and natural resources - identification and management.

Unit III

Production potential of different components of Integrated farming systems; interaction and mechanism of different production factors; stability of Integrated Farming system based on research/long term information. in different systems through research; eco-physiological approaches to intercropping. Integration of components and adaptability of different farming system based on land situations and climatic condition of a region; evaluation of IFS.

Unit IV

Simulation models for intercropping; soil nutrient in intercropping; preparation of different farming system models; evaluation of different farming systems. Formulation of different Integrated Farming system models; evaluation of different Integrated Farming system models. Recycling of organic waste in farming systems and in IFS.

Unit V

New concepts and approaches of farming system and organic farming; value addition, waste recycling, quantification and mitigation of Green House gases; case studies/ success stories of different Integrated Farming systems. cropping systems and organic farming; case studies on different farming systems. Possible use of ITK in Integrated farming system.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

Learning outcome

Experience on the knowledge of enterprises suitable for different agroclimatic conditions for sustainable agriculture and their proper utilization.

- | | | |
|------|-------------------|---|
| I. | Course title | : Soil Conservation and Watershed Management |
| II. | Course code | : Agron. 606 |
| III. | Credit hours | : 2 + 1 |
| IV. | Aim of the course | : To teach about different soil moisture conservation technologies for enhancing the agricultural productivity through a holistic approach based on watershed management. |

Theory

Unit I

Soil erosion: definition, nature and extent of erosion; types of erosion, factors affecting erosion

Unit II

Soil conservation: definition, methods of soil conservation; agronomic measures - contour cultivation, strip cropping, cover crops; mulching, tillage, cropping system vegetative barriers; improved dry farming practices; mechanical measures - bunding, gully control, bench terracing; role of grasses and pastures in soil conservation; wind breaks and shelter belts.

Unit III

Watershed management: definition, objectives, concepts, approach, components, steps in implementation of watershed; development of cropping systems for watershed areas. Remote sensing in watershed management.

Unit IV

Land use capability classification, alternate land use systems; agro-forestry; ley farming; *jhum* management - basic concepts, socio-ethnic aspects, its layout.

Unit V

Drainage, methods of drainage, Drainage considerations and agronomic management; rehabilitation of abandoned *jhum* lands and measures to prevent soil erosion.

Practical

- Study of different types of erosion
- Determination of dispersion ratio
- Estimation of soil loss by Universal Soil Loss Equation
- Estimation of soil loss by wind erosion
- Measurement of runoff and soil loss
- Field studies of different soil conservation measures
- Laying out run-off plot and deciding treatments
- Identification of different grasses and trees for soil conservation
- Visit to watershed areas
- Visit to a soil conservation research centre, demonstration and training centre

Teaching methods / activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

Learning outcome

Experience on the knowledge of soil moisture conservation technologies for enhancing the agricultural productivity through holistic approach on watershed management.

I.	Course title	: Stress Crop Production
II.	Course code	: Agron. 607
III.	Credit hours	: 2 + 1
IV.	Aim of the course	: To study the various types of stresses in crop production and strategies to overcome them.

Theory

Unit I

Stress and strain terminology; nature and stress injury and resistance; causes of stress.

Unit II

Low temperature stress: freezing injury and resistance in plants, measurement of freezing tolerance, chilling injury and resistance in plants, practical ways to overcome the effect of low temperature stress through, soil and crop manipulations.

Unit III

High temperature or heat stress: meaning of heat stress, heat injury and resistance in plants, practical ways to overcome the effect of heat stress through soil and crop manipulations.

Unit IV

Water deficit stress: meaning of plant water deficient stress and its effect on growth and development, water deficit injury and resistance, practical ways to overcome effect of water deficit stress through soil and crop, manipulations.

Unit V

Excess water or flooding stress: meaning of excess water stress, its kinds and effects on crop plants, excess water stress injury and resistance, practical ways to overcome excess water stress through soil and crop manipulations.

Unit VI

Salt stress: meaning of salt stress and its effect on crop growth, salt stress injury and resistance in plants, practical ways to overcome the effect of salt stress through soil and crop manipulations.

Unit VII

Mechanical impedance of soil and its impact on plant growth; measures to overcome soil mechanical impedance.

Unit VIII

Environmental pollution: air, soil and water pollution, and their effect on crop growth and quality of produce; ways and means to prevent environmental pollution.

Practical

- Determination of electrical conductivity of plant cell sap
- Determination of osmotic potential and tissue water potential
- Measurement of transpiration rate
- Measurement of stomatal frequency
- Measurement of Relative Water Content of leaf
- Measurement of electrolytic leakage
- Growing of plants in sand culture under salt stress for biochemical and physiological studies
- Studies on effect of osmotic and ionic stress on seed germination and seedling growth
- Measurement of low temperature injury under field conditions
- Studies on plant responses to excess water.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

Learning outcome

Experience on the knowledge of various types of stresses in crop production and strategies to overcome these .

I.	Course title	: Research and Publication Ethics
II.	Course code	: Agron. 608
III.	Credit hours	: 2 + 0
IV.	Aim of the course	: To sensitize the students on the different aspects of research, and ethics related to publication.

Theory

Unit I

Introduction to philosophy: definition, nature and scope, concept, branches

Unit II

Ethics: definition, moral philosophy, nature of moral judgements and reactions

Unit III

Scientific conduct: Ethics with respect to science and research, intellectual honesty and research integrity, Scientific misconducts- falsifications, fabrications and plagiarism (FFP): Redundant publications: duplicate and overlapping publications, salami slicing; selective reporting and misrepresentation of data

Unit IV

Publication ethics: Definition, introduction and importance. Best practices/standard setting initiatives and guidelines: COPE, WAME, etc., conflicts of interest. Publication misconduct: definition, concept, problems that lead to unethical behaviour and vice versa, type, violation of publication ethics, authorship and contributorship, Identification of publication misconduct, complaints and appeals, predatory publishers and journals

Unit V

Open access publishing: open access publication and initiatives: SHERPA, RoMEO online resource to check publisher copy right and self archiving policies; software tool to identify predatory publications developed by SPPU, Journal finder/journal suggestions tools viz., JANE, Elsevier Journal Finder, Springer Journal Suggester, etc.

Unit VI

Publication misconduct: Group discussions- subject specific ethical issues, FFP, authorship, conflicts of interest, complaints and appeals examples and fraud from India

and abroad. Software tools: Use of plagiarism software like Turnitin, Urkund and other open source software tools

Unit VII

Database and Research metrics: Indexing data base, citation database, web of science, scopus, etc. Impact factor of journal as per journal citation report, SNIP, SJR, IPP, Cite Score; Metrics: h-index, g-index, i10-index altmetrics.

Teaching methods / activities

Classroom teaching with AV aids, group discussion, assignments.

Learning outcome

Development of skill for research management and quality publication.

SOIL SCIENCE

Course Title with Credit Load for M.Sc. in Soil Science

Course Code	Course Title	Credit Hours
*Soil 501	Soil physics	2+1
*Soil 502	Soil fertility and fertilizer use	3+1
*Soil 503	Soil chemistry	2+1
*Soil 504	Soil mineralogy, genesis and classification	2+1
Soil 505	Soil erosion and conservation	2+1
*Soil 506	Soil Biology and Biochemistry	2+1
Soil 507	Radioisotopes in soil and plant studies	1+1
Soil 508	Soil, water and air pollution	2+1
Soil 509	Remote sensing and GIS technique for soil and crop studies	2+1
*Soil 510	Analytical technique and instrumental methods in soil and plant analysis	0+2
Soil 511	Management of problematic soils and water	1+1
Soil 512	Land degradation and restoration	1+0
Soil 513	Soil Survey and Land use Planning	2+0
Soil 514	Introduction to nanotechnology	2+1
Soil 591	Master's Seminar	1+0
Soil 599	Master's Research	30

*Indicates Core Courses which are Compulsory for Master Programme

- I. Course Title : Soil Physics**
II. Course Code : Soil 501
III. Credit Hours : 2+1
IV. Aim of the course

To impart basic knowledge about soil physical properties and processes in relation to plant growth.

v. Theory

Unit I

Basic principles of physics applied to soils, soil as a three phase system.

Unit II

Soil texture, textural classes, mechanical analysis, specific surface.

Unit III

Soil consistence; dispersion and workability of soils; soil compaction and consolidation; soil strength; swelling and shrinkage - basic concepts. Alleviation of soil physical constraints for crop production. Soil erosion and edibility

Unit IV

Soil structure - genesis, types, characterization and management, soil structure; soil aggregation, aggregate stability; soil tilth, characteristics of good soil tilth; soil crusting -mechanism, factors affecting and evaluation; soil conditioners; puddling, its effect on soil physical properties; clod formation.

Unit V

Soil water: content and potential, soil water retention, soil-water constants, measurement of soil water content, energy state of soil water, soil water potential, soil-moisture characteristic curve; hysteresis, measurement of soil-moisture potential.

Unit VI

Water flow in saturated and unsaturated soils, Poiseuille's law, Darcy's law; hydraulic conductivity, permeability and fluidity, hydraulic diffusivity; measurement of hydraulic conductivity in saturated and unsaturated soils.

Unit VII

Infiltration; internal drainage and redistribution; evaporation; hydrologic cycle, field water balance; soil-plant-atmosphere continuum.

Unit VIII

Composition of soil air; renewal of soil air - convective flow and diffusion; measurement of soil aeration; aeration requirement for plant growth; soil air

management.

Unit IX

Modes of energy transfer in soils; energy balance; thermal properties of soil; measurement of soil temperature; soil temperature in relation to plant growth; soil temperature management. Soil colour- classification, importance and identification.

VI. Practical

- Determination of B.D, P.D and mass volume relationship of soil, Mechanical analysis by hydrometer and international pipette method
- Measurement of Atterberg limits, Aggregate analysis - dry and wet, Measurement of soil-water content by different methods, Measurement of soil-water potential by using tensiometer and gypsum Blocks, Determination of soil-moisture characteristics curve and computation of pore-size, distribution, Determination of hydraulic conductivity under saturated and unsaturated conditions, Determination of infiltration rate of soil, Determination of aeration porosity and oxygen diffusion rate, Soil temperature measurements by different methods, Estimation of water balance components in bare and cropped fields.

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of soil physical properties and processes in relation to plant growth.

IX. Suggested Reading

I. Course Title : Soil Fertility and Fertilizer Use

II. Course Code : Soil 502

III. Credit Hours : 3+1

IV. Aim of the course

To impart knowledge about soil fertility and its control, and to understand the role of fertilizers and manures in supplying nutrients to plants so as to achieve high fertilizer use efficiency.

V. Theory

Unit I

Soil fertility and soil productivity; fertility status of major soils group of India; nutrient sources – fertilizers and manures; Criteria of essentiality, classification, law of minimum and maximum, essential plant nutrients - functions and deficiency symptoms, Nutrient uptake, nutrient interactions in soils and plants; long term effect of manures and fertilizers on soil fertility and crop productivity.

Unit II

Soil and fertilizer nitrogen – sources, forms, immobilization and mineralization, nitrification, denitrification; biological nitrogen fixation -types, mechanism, microorganisms and factors affecting; nitrogenous fertilizers and their fate in soils; management of fertilizer nitrogen in lowland and upland conditions for high fertilizer use efficiency.

Unit III

Soil and fertilizer phosphorus - forms, immobilization, mineralization, reactions in acid and alkali soils; factors affecting phosphorus availability in soils; phosphatic fertilizers - behavior in soils and management under field conditions. Potassium - forms, equilibrium in soils and its agricultural significance; mechanism of potassium fixation; management of potassium fertilizers under field conditions.

Unit V

Sulphur - source, forms, fertilizers and their behavior in soils; role in crops and human health; calcium and magnesium– factors affecting their availability in soils; management of sulphur, calcium and magnesium fertilizers.

Unit VI

Micronutrients – critical limits in soils and plants; factors affecting their availability and correction of their deficiencies in plants; role of chelates in

nutrient availability.

Unit VII

Common soil test methods for fertilizer recommendations; quantity– intensity relationships; soil test crop response correlations and response functions.

Unit VIII

Fertilizer use efficiency; site-specific nutrient management; plant need based nutrient management; integrated nutrient management; specialty fertilizers concept, need and category. Current status of specialty fertilizers use in soils and crops of India;

Unit IX

Soil fertility evaluation - biological methods, soil, plant and tissue tests; soil quality in relation to sustainable agriculture, Determination of critical limit, DRIS

Unit X

Definition and concepts of soil health and soil quality; Long term effects of fertilizers and soil quality.

VI. Practical

- Soil and plant sampling and processing for chemical analysis
- Determination of soil pH, total and organic carbon in soil
- Chemical analysis of soil for total and available nutrients (major and micro)
- Analysis of plants for essential elements (major and micro)

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of soil fertility and fertilizers in relation to plant growth and development.

IX. Suggested Reading

 - Troeh FR and Thompson LM. 2005. *Soils and Soil Fertility*. Blackwell.

I. Course Title : Soil Chemistry

II. Course Code : Soil 503

III. Credit Hours : 2+1

IV. Aim of the course

To introduce the classical concepts of soil chemistry and to familiarize students with modern developments in chemistry of soils in relation to using soils as a medium for plant growth.

v. Theory

Unit I

Chemical (elemental) composition of the earth's crust, soils, rocks and minerals

Unit II

Elements of equilibrium thermodynamics, chemical equilibria, electrochemistry and chemical kinetics.

Unit III

Soil colloids: inorganic and organic colloids - origin of charge, concept of point of zero-charge (PZC) and its dependence on variable-charge soil components, surface charge characteristics of soils; diffuse double layer theories of soil colloids, zeta potential, stability, coagulation/flocculation and peptization of soil colloids; electrometric properties of soil colloids; sorption properties of soil colloids; soil organic matter - fractionation of soil organic matter and different fractions, Characterization of OM; clay-organic interactions.

Unit IV

Ion exchange processes in soil; cation exchange- theories based on law of mass action (Kerr-Vanselow, Gapon equations, hysteresis, Jenny's concept), adsorption isotherms, Donnan-membrane equilibrium concept, clay-membrane electrodes and ionic activity measurement, thermodynamics, statistical

mechanics; anion and ligand exchange– Inner sphere and outer-sphere surface complex formation, fixation of oxyanions, Hysteresis in sorption-desorption of oxy-anions and anions, shift of PZC on ligand exchange, AEC, CEC; experimental methods to study ion exchange phenomena and practical implications in plant nutrition.

Unit V

Potassium, phosphate and ammonium fixation in soils covering specific and non-specific sorption; precipitation-dissolution equilibria; Concept of quantity/intensity (Q/ I) relationship; step and constant-rate K; management aspects.

Unit VI

Chemistry of acid soils; active and potential acidity; lime potential, chemistry of acid soils; sub-soil acidity.

Unit VII

Chemistry of salt-affected soils and amendments; soil pH, EC_e, ESP, SAR and important relations; soil management and amendments.

Unit VIII

Chemistry and electrochemistry of submerged soils, geochemistry of micronutrients, environmental soil chemistry

VI. Practical

Preparation of saturation extract, measurement of pH, EC, CO₃, HCO₃, Ca, Mg, K and Na, Determination of CEC and AEC of soils, Analysis of equilibrium soil solution for pH, EC, Eh by the use of Eh-pH meter and conductivity meter, Determination of point of zero-charge and associated surface charge characteristics by the serial potentiometric titration method, Extraction of humic substances, Potentiometric and conductometric titration of soil humic and fulvic acids, (E₄/E₆) ratio of soil humic and fulvic acids by visible spectrophotometric studies and the D (E₄/E₆) values at two pH values, Adsorption-desorption of phosphate/sulphate by soil using simple adsorption isotherm, Construction of adsorption envelope of soils by using phosphate/fluoride/sulphate and ascertaining the mechanism of the ligand exchange process involved, Determination of titratable acidity of an acid soil by BaCl₂-TEA method, Determination of Q/I relationship of potassium, Determination of lime requirement of an acid soil by buffer method, Determination of gypsum requirement of an alkali soil.

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of chemical behaviour of soil and their utility in research for solving field problem.

IX. Suggested Reading

- Van Olphen H. 1977. *Introduction to Clay Colloid Chemistry*. John Wiley & Sons.

I. Course Title : Soil Mineralogy, Genesis and Classification

II. Course Code : Soil 504

III. Credit Hours : 2+1

IV. Aim of the course

To acquaint students with basic structure of alumino-silicate minerals and genesis of clay minerals; soil genesis in terms of factors and processes of soil formation, and to enable students conduct soil survey and interpret soil survey reports in terms of land use planning.

v. Theory

Unit I

Fundamentals of crystallography, space lattice, coordination theory, isomorphism and polymorphism.

Unit II

Classification, structure, chemical composition and properties of clay minerals;

genesis and transformation of crystal line and non-crystal line clay minerals; identification techniques; amorphous soil constituents and other non-crystalline silicate minerals and their identification; clay minerals in Indian soils, role of clay minerals in plant nutrition, interaction of clay with humus, pesticides and heavy metals.

Unit III

Factors of soil formation, soil formation models; soil forming processes; weathering of rocks and mineral transformations; soil profile; weathering sequences of minerals with special reference to Indian soils.

Unit IV

Concept of soil individual; soil classification systems – historical developments and modern systems of soil classification with special emphasis on soil taxonomy; soil classification, soil mineralogy and soil maps – usefulness.

VI. Practical

- Separation of sand, silt and clay fraction from soil
- Determination of specific surface area and CEC of clay
- Identification and quantification of minerals in soil fractions
- Morphological properties of soil profile in different land forms
- Classification of soils using soil taxonomy
- Calculation of weathering indices and its application in soil formation
- Grouping soils using available database in terms of soil quality

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of soil taxonomy and genesis and their utility in research for solving field problem.

Elsevier.

- Wilding NE and Holl GF. (Eds.). 1983. *Pedogenesis and Soil Taxonomy*. I.

I. Course Title : Soil Erosion and Conservation

II. Course Code : Soil 505

III. Credit Hours : 2+1

IV. Aim of the course

To enable students to understand various types of soil erosion and measures to be taken for controlling soil erosion to conserve soil and water.

V. Theory

Unit I

History, distribution, identification and description of soil erosion problems in India.

Unit II

Forms of soil erosion; effects of soil erosion and factors affecting soil erosion; types and mechanisms of water erosion; raindrops and soil erosion; rainfall erosivity - estimation as EI30 index and kinetic energy; factors affecting water erosion; empirical and quantitative estimation of water erosion; methods of measurement and prediction of runoff; soil losses in relation to soil properties and precipitation.

Unit III

Wind erosion- types, mechanism and factors affecting wind erosion; extent of problem in the country.

Unit IV

Principles of erosion control; erosion control measures – agronomical and engineering; erosion control structures - their design and layout.

Unit V

Soil conservation planning; land capability classification; soil conservation in special problem areas such as hilly, arid and semi-arid regions, waterlogged and wet lands.

Unit VI

Watershed management - concept, objectives and approach; water harvesting and recycling; flood control in watershed management; socioeconomic aspects of watershed management; case studies in respect to monitoring and evaluation of watersheds; use of remote sensing in assessment and planning of watersheds, sediment measurement

VI. Practical

- Determination of different soil erodibility indices - suspension percentage, dispersion ratio, erosion ratio, clay ratio, clay/moisture equivalent ratio, percolation ratio, raindrop erodibility index
- Computation of kinetic energy of falling rain drops
- Computation of rainfall erosivity index (EI30) using rain gauge data
- Land capability classification of a watershed
- Visits to a watersheds

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of soil conservation and their utility in research for solving field problem.

IX. Suggested Reading

I. Course Title : Soil Biology and Biochemistry

II. Course Code : Soil 506

III. Credit Hours : 2+1

IV. Aim of the course

To teach students the basics of soil biology and biochemistry, including biogeochemical cycles, plant growth promoting rhizobacteria, microbial interactions in soil and other soil activities.

V. Theory

Unit I

Soil biota, soil microbial ecology, types of organisms in different soils; soil microbial biomass; microbial interactions; un-culturable soil biota.

Unit II

Microbiology and biochemistry of root-soil interface; phyllosphere; soil enzymes, origin, activities and importance; soil characteristics influencing growth and activity of microflora; Root rhizosphere and PGPR.

Unit III

Microbial transformations of nitrogen, phosphorus, sulphur, iron and manganese in soil; biochemical composition and biodegradation of soil organic matter and crop residues, microbiology and biochemistry of decomposition of carbonaceous and proteinaceous materials, cycles of important organic nutrients.

Unit IV

organic wastes and their use for production of biogas and manures; biotic factors in soil development; microbial toxins in the soil.

Unit V

Preparation and preservation of farmyard manure, animal manures, rural and urban composts and vermicompost.

Unit VI

Biofertilizers—definition, classification, specifications, method of production and role in crop production; FCO specifications and quality control of

biofertilizers.

Unit VII

Biological indicators of soil quality; bioremediation of contaminated soils; microbial transformations of heavy metals in soil; role of soil organisms in pedogenesis – important mechanisms and controlling factors; soil genomics and bioprospecting; soil sickness due to biological agents; xenobiotics; antibiotic production in soil.

VI. Practical

- Determination of soil microbial population
- Soil microbial biomass carbon
- Elemental composition, fractionation of organic matter and functional groups
- Decomposition of organic matter in soil
- Soil enzymes
- Measurement of important soil microbial processes such as ammonification, nitrification, N₂ fixation, S oxidation, P solubilization and mineralization of other micronutrients

VII. Teaching methods/ activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of soil microbes and their utility in research for solving field problem.

IX. Suggested Reading

- Paul EA and Clark FE. *Soil Microbiology and Biochemistry*.
- Lynch JM. *Soil Biotechnology*
- Willey JM, Linda M. Sherwood and Woolverton CJ. *Prescott's Microbiology*.

I.	Course Title	: Radioisotopes in Soil and Plant Studies
II.	Course Code	: Soil 507
III.	Credit Hours	: 1+1

IV. Aim of the course

To train students in the use of radio isotopes in soil and plant research.

V. Theory

Unit I

Atomic structure, radio activity and units; radio isotopes-properties and decay principles; nature and properties of nuclear radiations; interaction of nuclear radiations with matter, artificial radioactivity

Unit II

Principles and use of radiation monitoring instruments-proportional, Geiger Muller counter, solid and liquids scintillation counters; neutron moisture meter, mass spectrometry, autoradiography

Unit III

Isotopic dilution techniques used in soil and plant research; use of stable isotopes; application of isotopes in studies on organic matter, nutrient transformations, ion transport, rooting pattern and fertilizer use efficiency; carbon dating

Unit IV

Doses of radiation exposure, radiation safety aspects regulatory aspects, collection, storage and disposal of radioactive wastes

VI. Practical

- Storage and handling of radioactive materials
- Determination of half-life and decay constant
- Preparation of soil and plant samples for radioactive measurements
- Setting up of experiment on fertilizer use efficiency and cation exchange equilibria using radio isotopes
- Determination of A, E and L values of soil using $^{32}\text{P}/^{65}\text{Zn}$
- Use of neutron probe for moisture determination
- Sample preparation and measurement of ^{15}N enrichment by mass spectro photometry/ emission spectrometry

VII. Teaching methods/ activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of radio activity and their utility in research for solving field problems.

IX. Suggested Reading

- Comer CL. 1955. *Radioisotopes in Biology and Agriculture: Principles and Practice*. Tata McGraw Hill.
- Glasstone S. 1967. *Source Book on Atomic Energy*. East West Press.
- Michael FL and Annunziata. 2003. *Handbook of Radioactivity Analysis*. Academic Press.

I. Course Title : Soil, Water and Air Pollution

II. Course Code : Soil 508

III. Credit Hours : 2+1

IV. Aim of the course

To make the student aware of the problems of soil, water and air pollution associated with use of soils for crop production.

V. Theory

Unit I

Soil, water and air pollution problems associated with agriculture, nature and extent.

Unit II

Nature and sources of pollutants – agricultural, industrial, urban wastes, fertilizers and pesticides, acid rains, oil spills etc.; air, water and soil pollutants-their CPC standards and effect on plants, animals and human beings.

Unit III

Sewage and industrial effluents—their composition and effect on soil properties/health, and plant growth and human beings; soil as sink for waste disposal.

Unit IV

Pesticides—their classification, behaviour in soil and effect on soil microorganisms.

Unit V

Toxic elements—their sources, behaviour in soils, effect on nutrients availability, effect on plant and human health.

Unit VI

Pollution of water resources due to leaching of nutrients and pesticides from soil; emission of greenhouse gases—carbon dioxide, methane and nitrous oxide.

Unit VII

Risk assessment of polluted soil, Remediation/ amelioration of contaminated

soil and water; remote sensing applications in monitoring and management of soil and water pollution.

VI. Practical

Sampling of sewage waters, sewage sludge, solid/ liquid industrial wastes, polluted soils and plants and their processing, Estimation of dissolved and suspended solids, chemical oxygen demand (COD), biological demand (BOD), measurement of coliform (MPN), nitrate and ammoniacal nitrogen and phosphorus, heavy metal content in effluents, Heavy metals in contaminated soils and plants, Management of contaminants in soil and plants to safe guard food safety, Air sampling and determination of particulate matter and oxides of sulphur, NO₂ and O₂ conc. Visit to various industrial sites to study the impact of pollutants on soil and plants.

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Management of soil and water pollution

IX. Suggested Reading

- Lal R, Kimble J, Levine E and Stewart BA. 1995. *Soil Management and Greenhouse Effect*. CRC Press.
- Middlebrooks EJ. 1979. *Industrial Pollution Control*. Vol. I. *Agro-Industries*. John Wiley Interscience.
- Ross SM. *Toxic Metals in Soil Plant Systems*. John Wiley & Sons.
- Vesilund PA and Pierce 1983. *Environmental Pollution and Control*. Ann Arbor Science Publ.

I. Course Title: Remote Sensing and GIS Technique for Soil, Water and Crop Studies

II. Course Code : Soil 509

III. Credit Hours : 2+1

IV. Aim of the course

To impart knowledge about the basic concepts of remote sensing, aerial photographs and imageries, and their interpretation; application of remote sensing in general and with special reference to soil, plants and yield forecasting; to impart knowledge about geo-statistical techniques with special reference to krigging, and GIS and applications in agriculture.

v. Theory

Unit I

Introduction and history of remote sensing; sources, propagation of radiations in atmosphere; interactions with matter, basic concepts and principles; hardware and software requirements; common terminologies of geographic information system (GIS).

Unit II

Sensor systems-camera, microwave radio meters and scanners; fundamentals of aerial photographs and multispectral imaging, hyperspectral imaging, thermal imaging; image processing and interpretations.

Unit III

Application of remote sensing techniques-land use soil surveys, crop stress and yield forecasting, prioritization in watershed and drought management, waste land identification and management.

Unit IV

Significance and sources of the spatial and temporal variability in soils; variability in relation to size of sampling; classical and geo-statistical techniques of evolution of soil variability.

Unit V

Applications of GIS for water resources, agriculture, precision farming, disaster management, e-governance, Agricultural Research Information System (ARIS).

VI. Practical

Familiarization with different remote sensing equipments and data products, Interpretation of aerial photo graphs and satellite data for mapping of land resources, Analysis of variability of different soil properties with classical and geostatistical techniques, Creation of datafiles in a database programme, Use of GIS for soil spatial simulation and analysis, To enable the students to conduct soil survey and interpret soil survey reports in terms of land use planning.

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of remote sensing and their utility in research for solving field problem.

IX. Suggested Reading

- Brady NC and Weil RR. 2002. *The Nature and Properties of Soils*. 13th Ed. Pearson Edu.

I. Course Title : Analytical Technique and Instrumental Methods in Soil and Plant Analysis

I. Course Code : Soil 510

II. Credit Hours : 0+2

III. Aim of the course

To familiarize the students with commonly used instruments – their working, preparations of common analytical reagents for qualitative and quantitative analysis of both soil as well as plant samples.

IV. Practical

Unit I

Preparation of solutions for standard curves, indicators and standard solutions for acid-base, oxidation reduction and complexometric titration; soil, water and plant sampling techniques, their processing and handling.

Unit II

Determination of nutrient potentials and potential buffering capacities of soils for phosphorus and potassium; estimation of phosphorus, ammonium and potassium fixation capacities of soils.

Unit III

Principles of visible, ultra violet and infrared spectrophotometry, atomic absorption, flame-photometry, inductively coupled plasma spectrometry; chromatographic techniques, mass spectrometry and X-ray diffractometry; identification of minerals by X-ray by different methods, CHNS analyzer.

Unit IV

Electrochemical titration of clays; estimation of exchangeable cations (Na, Ca, Mg, K); estimation of root cation exchange capacity.

Unit V

Wet digestion/fusion/extraction of soil with aquaregia with soil for elemental

analysis; triacid/di-acid digestion of plant samples; determination of available and total nutrients (N, P, K, S, Ca, Mg, Zn, Cu, Fe, Mn, B, Mo) in soils; determination of total nutrients (N, P, K, S, Ca, Mg, Zn, Cu, Fe, Mn, B, Mo) in plants

Unit VI

Drawing normalized exchange isotherms; measurement of redox potential.

V. Teaching methods/activities

Classroom teaching and laboratory practicals

VI. Learning outcome

Development of confidence for setting soil testing laboratory.

I. Course Title : Management of Problem Soils and Water

II. Course Code : Soil 511

III. Credit Hours : 2+1

IV. Aim of the course

To educate students about basic concepts of problem soils and brackish water, and their

management. Attention will be on management of problem soils and safe use of brackish water in relation to crop production.

V. Theory

Unit I

Area and distribution of problem soils—acidic, saline, sodic and physically degraded soils; origin and basic concept of problematic soils, and factors responsible.

Unit II

Morphological features of saline, sodic and saline-sodic soils; characterization of salt-affected soils-soluble salts, ESP, pH; physical, chemical and microbiological properties.

Unit III

Management of salt-affected soils; salt tolerance of crops- mechanism and ratings; salt stress meaning and its effect on crop growth, monitoring of soil salinity in the field; management principles for sandy, clayey, red lateritic and dryland soils.

Unit IV

Acid soils-nature of soil acidity, sources of soil acidity; effect on plant growth, lime requirement of acid soils; management of acid soils; biological sickness of soils and its management.

Unit V

Quality of irrigation water; management of brackish water for irrigation; salt balance under irrigation; characterization of brackish waters, area and extent; relationship in water use and quality.

Unit VI

Agronomic practices in relation to problematic soils; cropping pattern for utilizing poor quality groundwaters.

VI. Practical

Characterization of acid, acid sulfate, salt-affected and calcareous soils, Determination of cations (Na^+ , K^+ , Ca^{++} and Mg^{++}) in groundwater and soil samples, Determination of an ions (Cl^- , SO_4^- , CO_3^- and HCO_3^-) in groundwaters and soil samples, Lime and gypsum requirements of acid and sodic soils.

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on solving field problem of problem soil and waters.

IX. Resources

- Bear FE. 1964. *Chemistry of the Soil*. Oxford & IBH.
- Jurinak JJ. 1978. *Salt-affected Soils*. Department of Soil Science & Biometeorology. Utah State University
- USDA Handbook No. 60. 1954. *Diagnosis and improvement of Saline and Alkali Soils*. Oxford & IBH.

I. Course Title : Land Degradation and Restoration

II. Course Code : Soil 512

III. Credit Hours : 1+0

IV. Aim of the course

To impart knowledge related to various factors and processes of land degradation and their restoration techniques.

V. Theory

Unit I

Type, factors and processes of soil/land degradation and its impact on soil productivity including soil fauna, biodegradation and environment.

Unit II

Land restoration and conservation techniques-erosion control, reclamation of salt- affected soils; mine land reclamation, afforestation, organic products.

Unit III

Extent, diagnosis and mapping of land degradation by conventional and modern RS-GIS tools; monitoring land degradation by fast assessment, modern tools, land use policy, incentives and participatory approach for reversing land degradation; global issues for twenty first century.

VI. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VII. Learning outcome

Experience on restoration of degraded soil for optimization of crop yield.

VIII. Suggested Reading

- I. **Course Title** : **Soil Survey and Land Use Planning**
 II. **Course Code** : **Soil 513**
 III. **Credit Hours** : **2+0**

IV. **Aim of the course**

To teach the better utilization of land for agricultural purposes, and better management of run-off or surplus/ excessive rain-water in the catchment area for agricultural purposes in a watershed.

V. **Theory**

Unit I

Soil survey and its types; soil survey techniques- conventional and modern; soil series–characterization and procedure for establishing soil series; benchmark soils and soil correlations; soil survey interpretations; thematic soil maps, cartography, mapping units, techniques for generation of soil maps, application of remote sensing and GIS in soil survey and mapping of major soil group of India

Unit II

Landform–soil relationship; major soil groups of India with special reference to respective states; land capability classification and land irrigability classification; land evaluation and land use type (LUT)–concept and application; approaches for managing soils and landscapes in the framework of agro-ecosystem.

Unit III

Concept and techniques of land use planning; factors governing present land use; Land evaluation method sand soil-site suitability evaluation for different crops; land capability classification and constraints in application.

Unit IV

Agro-ecological regions/sub-regions of India and their characteristics in relation to crop production. Status of LUP in India.

VI. Practical

- Aerial photo and satellite data interpretation for soil and land use
- Cartographic techniques for preparation of base maps and thematic maps, processing of field sheets, compilation and obstruction of maps in different scales
- Land use planning exercises using conventional and RS tools

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, field visit and exposure visit.

VIII. Learning outcome

Planning for land use in proper way for higher crop productivity.

IX. Suggested Reading

- Boul SW, Hole ED, MacCracken RJ and Southard RJ. 1997. *Soil Genesis and Classification*.
- 4th Ed. Panima Publ.
- Brewer R. 1976. *Fabric and Mineral Analysis of Soils*. John Wiley & Sons.

I. Course Title : Introduction to Nanotechnology

II. Course Code : Soil 514

III. Credit Hours : 2+1

IV. Aim of the course

To impart basic knowledge about nanoscience, properties of nanoparticles and their applications in biology

v. Theory

Unit I

General introduction: Basics of quantum mechanics, harmonic oscillator, magnetic phenomena, band structure in solids, Mössbauer effect and spectroscopy, optical phenomena, bond in solids, an isotropy.

Unit II

Nanostructures: growth of compound semiconductors, super lattices, self-assembled quantum dots, nano-particles, nano tubes and nanowires, fullerenes (buck balls, graphene). Nanofabrication and nano-patterning: Optical, X-ray, and electron beam lithography, self-assembled organic layers, process of synthesis of nano powders, electrode position, important nanomaterials.

Unit III

Mechanical properties, magnetic properties, electrical properties, electronic conduction with nanoparticles, investigating and manipulating materials in the

nanoscale: Electron microscopy

Unit IV

Nano-biology: Interaction between biomolecules and nano-particle surface, different types of inorganic materials used for the synthesis of hybrid nano-bio assemblies, application of nano-in agriculture, current status of nano-biotechnology, future perspectives of nano-biology, nano-sensors.

VI. Practical

- Sources of nanoparticles and its preparation by different approaches
- Electrospinning and its use in agriculture and allied sector.
- Equipments used in Nanotechnology: its principle and uses
- Acquaintances with different equipments used in nanotechnology.
- Synthesis and characterization of Ag and ZnO nanoparticles.
- Mode of action of ZnO nanoparticles against soil borne diseases
- Study on efficacy of ZnO nanoparticles as seed treating agent on plant growth parameters.

VII. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VIII. Learning outcome

Experience on the knowledge of nano science and their utility in research for solving field problem.

IX. Suggested Reading

Course Title with Credit Load for Ph D in Soil Science

Course Code	Course Title	Credit Hours
Soil 601	Recent trends in soil physics	2+0
Soil 602	Modern concept in soil fertility	2+0
Soil 603*	Physical chemistry of soil	2+0
Soil 604*	Soil genesis and micromorphology	2+0
Soil 605	Bio-chemistry of soil organic matter	2+0
Soil 606	Soil resource management	3+0
Soil 607	Modelling of soil plant system	2+0
Soil 608	Clay Mineralogy	2+1
Soil 609	Recent trends in soil microbial biodiversity	2+1
Soil 691	Doctoral seminar	1+0
Soil 692	Doctoral seminar	1+0
Soil 699	Doctoral Research	75

*Indicates Core Courses which are Compulsory for PhD Programme

I. Course Title : Recent Trends in Soil Physics

II. Course Code : Soil 601

III. Credit Hours : 2+0

IV. Aim of the course

To provide knowledge of modern concept sin soil physics.

V. Theory

Unit I

Soil-water interactions, soil water potential, free energy and thermodynamic basis of potential concept, chemical potential of soil water and entropy of the system, soil-plant-atmospheric continuum (SPAC).

Unit II

Fundamentals of fluid flow, Poiseuilles law, Laplace's equation, Darcy's law in saturated and unsaturated flows; development of differential equations in saturated and unsaturated water flow, capillary conductivity and diffusivity; limitations of Darcy's law; numerical solution for one dimensional water flow.

Unit III

Theories of horizontal and vertical infiltration under different boundary conditions.

Unit IV

Movement of salts in soils, models for miscible-immiscible displacement, diffusion, mass flow and dispersion of solutes and their solutions through differential equations; break-through curves.

Unit V

Soil air and aeration, mass flow and diffusion processes; thermal properties of soil, heat transfer in soils, differential equation of heat flow, measurement of thermal conductivity of soil; Soil, Plant, Water relations- Plant uptake of soil moisture, Water balance and energy balance in the field; irrigation and water use efficiency.

Unit VI

Soil crust and clod formation; structural management of puddled rice soils; soil conditioning-concept, soils conditioners-types, characteristics, working principles, significance in agriculture.

Unit VII

Solar and terrestrial radiation measurement, dissipation and distribution in soil-crop systems; prediction of evapotranspiration using aerodynamic and canopy temperature-based models; canopy temperature and leaf diffusion resistance in

relation to plant water deficit; evaluation of soil and plant water status using infra- red thermometer.

VI. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VII. Learning outcome

Experience on the knowledge of soil physical properties and processes in relation to plant growth.

VIII. Suggested Reading

- Baver LD, Gardner WH and Gardner WR. 1972. *Soil Physics*. John Wiley & Sons.
- Hanks and Ascheroff. 1980. *Applied Soil Physics*. Springer Verlag.

I. Course Title : Modern Concept in Soil Fertility

II. Course Code : Soil 602

III. Credit Hours : 2+0

IV. Aim of the course

To provide knowledge of modern concepts of soil fertility and nutrient use in crop production.

V. Theory

Unit I

Nutrient availability-concept and relationships, modern concepts of nutrient availability; soil colloids and nutrient availability; soil amendments and availability maintenance of nutrients, soil solution and plant growth; nutrient response functions and availability indices.

Unit II

Nutrient movement in soils; nutrient absorption by plants; mechanistic approach to nutrient supply and uptake by plants; models for transformation and movement of major micronutrients in soils.

Unit III

Chemical equilibria (including solid-solution equilibria) involving nutrient ions in soils, particularly in submerged soils; Kinetic studies of nutrients in soils.

Unit IV

Modern concepts of fertilizer evaluation, nutrient use efficiency and nutrient budgeting.

Unit V

Modern concepts in fertilizer application; soil fertility evaluation techniques; role of soil tests in fertilizer use recommendations; site-specific nutrient management for precision agriculture.

Unit VI

Monitoring physical, chemical and biological changes in soils; permanent manurial trials and long-term fertilizer experiments; soil productivity under long-term intensive cropping; direct, residual and cumulative effect of fertilizer use.

Unit VII

Carbon– a nutrient central to soil fertility; carbon cycle in nature, stocks, pools and fluxes; greenhouse effect and climate change; carbon sequestration vis-à-vis-sustenance of soil quality and crop productivity.

VI. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VII. Learning outcome

Experience on the knowledge of soil fertility and fertilizers in relation to plant growth and development.

I. Course Title : Physical Chemistry of Soil

II. Course Code : Soil 603

III. Credit Hours : 2+0

IV. Aim of the course

To impart knowledge about modern concepts of physical chemistry of soils and clays, with emphasis on understanding the processes involved with practical significance.

V. Theory

Unit I

Colloidal chemistry of inorganic and organic components of soils—their formation, clay organic interaction.

Unit II

Predictive approaches for cation exchange equilibria- thermodynamics, empirical and diffuse double layer theory (DDL)- relationships among different selectivity coefficients; structure and properties of diffuse double layer.

Unit III

Thermodynamics of nutrient transformations in soils; Climate change effects on mineralogy and surface properties of variable charge; cationic and anionic exchange and their models, molecular interaction.

Unit IV

Adsorption/desorption isotherms-Langmuir adsorption isotherm, Freundlich

adsorption isotherm, normalized exchange isotherm, BET equation; selective and non-selective adsorption of ions on inorganic surfaces and organic surfaces of soil materials (citation of utility in agricultural system).

Unit V

Common solubility equilibria-carbonates, iron oxide and hydroxides, aluminum silicate, aluminum phosphate; electrochemical properties of clays (citation of examples from agricultural use).

VI. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VII. Learning outcome

Experience on the knowledge of soil chemical behaviour on research for solving field problems.

VIII. Suggested Reading

- I. **Course Title : Soil Genesis and Micromorphology**
- II. **Course Code : Soil 604**
- III. **Credit Hours : 2+0**
- IV. **Aim of the course**
To impart knowledge about the pedogenic processes in soils and to acquaint with the micro-pedological study of soil profile.
- V. **Theory**
Unit I
Pedogenic evolution of soils; soil composition and characterization.
Unit II
Weathering and soil formation—factors and pedogenic processes; stability and weathering sequences of minerals.
Unit III
Assessment of soil profile development by mineralogical and chemical analysis.
Unit IV
Micro-pedological features of soils—their structure, fabric analysis, role in genesis and classification.
- VI. **Teaching methods/activities**
Classroom teaching with AV aids, group discussion, oral presentation by students.
- VII. **Learning outcome**
Experience on the knowledge of soil micro pedology and soil taxonomy on research for solving field problems.
- VIII. **Suggested Reading**
 - Brady NC and Weil RR. 2002. *The Nature and Properties of Soils*. 13th Ed. Pearson Edu.

- I. **Course Title : Biochemistry of Soil Organic Matter**
- II. **Course Code : Soil 605**
- III. **Credit Hours : 2+0**
- IV. **Aim of the course**

To impart knowledge related to chemistry and reactions of organic substances and their significance in soils.

V. **Theory**

Unit I

Organic matter in soils and its maintenance. Role of organic matter in soil productivity; humus levels in soils; current thinking on the maintenance of organic matter in the soils. Carbon retention and sequestration.

Unit II

Biochemistry of the humus formation; different pathways for humus synthesis in soil; soil carbohydrates and lipids.

Unit III

Nutrient transformation–N, P, S; trace metal interaction with humic substances, significance of chelation reactions in soils.

Unit IV

Reactive functional groups of humic substances, adsorption of organic compounds by clay and role of organic substances in pedogenic soil aggregation processes; clay- organic matter complexes.

Unit V

Humus-pesticide interactions in soil, mechanisms.

VI. **Teaching methods/activities**

Classroom teaching with AV aids, group discussion, oral presentation by students.

VII. **Learning outcome**

Experience problems on the knowledge of soil biochemistry on research for solving field

VIII. **Reading Materials**

- Lynch JM, Willey JM. *Soil Biotechnology*.
- Paul EA and Clark FE. *Soil Microbiology and Biochemistry*.

- Sherwood LM and Woolverton CJ. *Prescott's Microbiology*.
- Subba Rao NS. *Advances In Agricultural Microbiology*.

- I. **Course Title** : **Soil Resource Management**
- II. **Course Code** : **Soil 606**
- III. **Credit Hours** : **3+0**
- IV. **Aim of the course**

To impart the students basic holistic knowledge on soil resource and latest developments in its sustainable use.

Unit I

Relevance of soil management to sustainable agriculture; soil as a natural resource for biomass production, filtering, buffering, transportation of solutes, gene reserves, and geogenic source of raw materials; soil as a source and sink of greenhouse gases.

Unit II

Concept of sustainable land management (SLM); spatial variability of soils; soil quality and food security; soil quality indices, conservation agriculture in relation to soil quality; soil resilience and resistance.

Unit III

Types, factors and causes of land degradation and desertification; GLASOD classification; application of GIS and remote sensing in monitoring, diagnosis and mapping land degradation; history, distribution, identification and description of soil erosion problems in India; forms of soil erosion; impact of soil erosion-on-site and off-site effects; strategies for erosion control and conservation; soil conservation in hilly, arid, semiarid, coastal and diaralands. Management of forest, peat and muck soils.

Unit IV

Soil conservation planning; land capability classification; soil conservation in special problem areas such as hilly, arid and semi-arid regions, waterlogged and wetlands; land restoration and conservation techniques—erosion control, reclamation of salt affected soils; mine land reclamation, afforestation, organic products, soil fauna and biodegradation.

Unit V

Watershed management-concept, objectives and approach; water harvesting and recycling; flood control in watershed management; socio-economic aspects of watershed management; case studies in respect to monitoring and evaluation of watersheds.

Unit VI

Agro-ecological regions of India; potentials and constraints of soils of different regions; land evaluation and rationalizing land use, decision support system with relation to land management; national and international soil policy considerations.

V. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VI. Learning outcome

Experience on the knowledge of soil resources on research for solving field problems.

I. Course Title : Modelling of Soil Plant System

II. Course Code : Soil 607

III. Credit Hours : 2+0

IV. Aim of the course

To train the students in concepts, methodology, technology and use of systems simulation in soil and crop studies

V. Theory

Unit I

Introduction, terms and definitions; classification of models; Taylor series; numerical methods of differentiation and integration.

Unit II

High level computer language: FORTRAN-its commands and usage; testing and evaluation of model.

Unit III

Description of spatially homogeneous models; K transformation model; nitrogen and phosphorus dynamics in soil.

Unit IV

Spatially heterogeneous models; equation of continuity; Simulation of water flow through soil; Explicit and Explicit-Implicit method; simulation of solute movement through soil with variable moisture flux by explicit-implicit method.

Unit V

Nutrient uptake model: Integration of nutrient movement in soil (mass flow and diffusion) and uptake by plants (Michaelis-Menten kinetics); Nutrient uptake model: Solubility and free ion activity model.

VI. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VII. Learning outcome

Experience on soil modelling concept for forecasting productivity

I. **Course Title** : **Clay Mineralogy**

II. **Course Code** : **Soil 608**

III. **Credit Hours** : **2+1**

IV. **Theory**

Unit I

Definition and concepts of clays and clay minerals, Fundamentals of Fundamentals of crystallography – unit cell, external characteristics of crystals, crystallographic notations, crystal systems.

Unit II

Structures and classification of silicate minerals, basics of phyllosilicates, laws governing structural characteristics of phyllosilicates, Goldschmidt's laws – Laws I and Law II, Classification of Phyllosilicates.

Unit III

Kaolinite group of minerals, Dioctahedral kaolins and Trioctahedral kaolins.

Unit IV

Smectites; properties of smectites, Reference models of structure, principal types based on Hofmann-Marshall-Hendricks (H-M-H) models, occurrence of smectites, transformation and formation in soils.

Unit V

Micas: occurrence and origin in soils, polytypes of micas, structure and formation of muscovites and illite.

Unit VI

Vermiculites: structure, occurrence in soils, formation, relation between vermiculites and montmorillonite.

Unit VII

Chlorite: occurrence and structure of chlorites, “swelling chlorites”, formation of chlorite.

Unit VIII

Non-crystalline clays (amorphous materials), subgroups and chemical composition, morphology and structure, physico-chemical properties, influence of non-crystalline clays on soil properties.

Unit IX

Interstratified clay minerals, occurrence and formation in soils, regularly interstratified and partially random interstratified minerals.

Unit X

Genesis and transformation of clay minerals, Generalized conditions for formation and persistence of common clay-size minerals in soils.

Unit XI

Surface chemistry of clay minerals, clay-organic complexes, nanoclay mineralogy.

Unit XII

Clay minerals in different soil orders, role of clay minerals in soil fertility management.

V. Practicals

- Separation of clay for mineralogical study
- X-ray diffraction analysis of clay
- Selective dissolution of clay minerals
- IR, DTA and SEM of clay minerals
- Identification and quantification of clay minerals
- Determination of surface charge of clay minerals
- Potentiometric titration of clay minerals.

VI. Teaching methods/activities

Classroom teaching with AV aids, group discussion, oral presentation by students.

VII. Learning outcome

Experience on soil clays and utility in soil research.

VIII. Suggested Reading

I. Course Title : Recent Trends in Soil Microbial Biodiversity

II. Course Code : Soil 609

III. Credit Hours : 2+1

IV. Theory

Unit I

Microbial evaluation and biodiversity, Microbial communities in ecosystems, New insights in below ground diverse of plant performance.

Unit II

Qualitative ecology of microorganisms; Biomass and activities.

Unit III

Nitrogen fixing organisms, Trends in diversity of N fixing organisms. Molecular approaches in characterizing N fixing microorganisms.

Unit IV

Serology and molecular characterization, ecological aspects of bio determination, soil waste and water management

Unit V

Biodegradability, testing and monitoring of the bioremediation of xenobiotic pollutants and bacterial fertilizers

V. Practicals

- Determination of soil microbes using classical techniques.
- Determination of soil microbial diversity using molecular techniques.
- Estimation of soil microbial biomass carbon, nitrogen and phosphorus.

- Estimation of key soil enzyme activities.
- Community level physiological profiling of microbial diversity.

VI. Teaching methods/Activities

Classroom teaching with AV aids, group discussion, field visit

VII. Learning outcome

Experience on soil microbial diversity and planning for proper utilization.

VIII. Suggested Reading

- Lynch JM, Willey JM. *Soil Biotechnology*.
- Paul EA and Clark FE. *Soil Microbiology and Biochemistry*.
- Sherwood LM and Woolverton CJ. *Prescott's Microbiology*.
- Subba Rao NS. *Advances In Agricultural Microbiology*.

I. Course Title : Research and Publication Ethics

II. Course Code : Soil 610

III. Credit Hours : 2+0

IV. Theory

Unit I

Introduction to philosophy: definition, nature and scope, concept, branches

Unit II

Ethics: definition, moral philosophy, nature of moral judgements and reactions

Unit III

Scientific conduct: Ethics with respect to science and research, intellectual honesty and research integrity, Scientific misconducts- falsifications, fabrications and plagiarism (FFP): Redundant publications: duplicate and overlapping publications, salami slicing; selective reporting and misrepresentation of data.

Unit IV

Publication ethics: Definition, introduction and importance. Best practices/standard setting initiatives and guidelines: COPE, WAME, *etc.*, conflicts of interest. Publication misconduct: definition, concept, problems that lead to unethical behaviour and vice versa, type, violation of publication ethics, authorship and contributorship, Identification of publication misconduct, complaints and appeals, predatory publishers and journals

Unit V

Open access publishing: open access publication and initiatives: SHERPA, RoMEO online resource to check publisher copy right and self archiving

policies; software tool to identify predatory publications developed by SPPU, Journal finder/journal suggestions tools, viz., JANE, Elsevier Journal Finder, Springer Journal Suggester etc.

Unit VI

Publication misconduct: Group discussions- subject specific ethical issues, FFP, authorship, conflicts of interest, complaints and appeals examples and fraud from India and abroad. Software tools: Use of plagiarism software like Turnitin, Urkund and other open source software tools.

Unit VII

Database and Research metrics: Indexing data base, citation database, web of science, scopus, etc. Impact factor of journal as per journal citation report, SNIP, SJR, IPP, Cite Score; Metrics: h-index, g index, i10 index altmetrics

V. Teaching methods/activities

Classroom teaching with AV aids, group discussion, field, laboratory and library visit

VI. Learning outcome

Quality research output and outstanding research publication with excellent impact factor

AGRICULTURAL METEOROLOGY

Course Title with Credit Load for M.Sc. in Agricultural Meteorology

Course Code	Course Title	Credit Hours
AGM 501*	Fundamentals of Meteorology	2+1
AGM 502*	Fundamentals of Agricultural Meteorology	2+1
AGM 503	Crop-weather Relationships	2+0
AGM 504*	Agro-meteorological Measurements and Instrumentation	1+2
AGM 505	Crop Micrometeorology	2+1
AGM 506	Evapotranspiration and Soil Water Balance	2+1
AGM 507	Crop weather models	1+2
AGM 508	Applied Agricultural Climatology	1+2
AGM 509	Weather forecasting	2+1
AGM 510	RS and GIS Applications in Agricultural Meteorology	2+1
AGM 511	Strategic use of climatic information	2+1
AGM 512	Weather and climate risk management	2+0
AGM 513	Aerobiometeorology	2+1
AGM 591	Master's Seminar	1+0
AGM 599	Master's Research	30

*Indicates core courses for M.Sc.

I. **Course Title : Fundamentals of Meteorology**

II. **Course Code : AGM 501**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

To impart theoretical and practical knowledge of physical processes occurring in atmosphere and techniques used in meteorology.

V. **Theory**

Unit I

Solar radiation and laws of radiation; greenhouse effect, albedo, and heat balance of the earth and atmosphere; variation in pressure and temperature with height, potential temperature, pressure gradient, cyclonic and anticyclonic motions; geostrophic and gradient winds; equations of motion; general circulation, turbulence, vorticity, atmospheric waves.

Unit II

Gas laws, laws of thermodynamics and their application to atmosphere; water vapour in the atmosphere, various humidity parameters and their interrelationships; vapour pressure, psychrometric equation, saturation deficit, Lapse rates-ascent of dry and moist air, stability and instability conditions in the atmosphere.

Unit III

Agromet observatory and analysis of weather data; Condensation; clouds and their classification; evaporation and rainfall; the hydrological cycle; precipitation processes, artificial rainmaking, thunderstorms and dust storm; haze, mist, fog, and dew; air masses and fronts; tropical and extra-tropical cyclones.

Unit IV

Effect of Earth's rotation on zonal distribution of radiation, rainfall, temperature, and wind; the trade winds, equatorial trough and its movement;

Unit V

Monsoon and its origin; Indian monsoon and its seasonal aspects: Onset, advancement and retreat of monsoon in different parts of India, Walker and Hadley cell, El Nino, La Nina, Southern Oscillation Index and their impact on monsoon.

VI. **Practical**

- Agromet observatory- different classes of observatories (A, B, C)

- Site selection and installation procedures for meteorological instruments
- Measurement of weather parameters.
- Reading and recording, calculation of daily, weekly, monthly means.
- Totals of weather data.
- Weather chart preparation and identification of low pressure systems and ridges.
- Statistical technique for computation of climatic normals, moving average, etc.

VII. Teaching methods/activities

Classroom teaching and practical-classes, visit to Agromet Observatory

VIII. Learning outcome

Basic knowledge on meteorology and climatology, physical laws governing atmosphere and monsoon

IX. Suggested Reading

- I. Course Title : Fundamentals of Agricultural Meteorology**
II. Course Code : AGM 502
III. Credit Hours : 2+1
IV. Aim of the course

To impart the theoretical and practical knowledge of physical processes occurring in relation to plant and atmosphere with advanced techniques.

V. Theory

Unit I

Meaning and scope of agricultural meteorology; components of agricultural meteorology; role and responsibilities of agricultural meteorologists.

Unit II

Importance of meteorological parameters in agriculture; efficiency of solar energy conversion into dry matter production; meteorological factors in photosynthesis, respiration and net assimilation; basic principles of water balance in ecosystems; soil-water balance models and water production functions.

Unit III

Crop weather calendars; weather forecasts for agriculture at short, medium and long range levels; agromet advisories, preparation, dissemination and economic impact analysis; use of satellite imageries in weather forecasting; synoptic charts and synoptic approach to weather forecasting.

Concept, definition, types of drought and their causes; prediction of drought; crop water stress index, crop stress detection; air pollution and its influence on vegetation, meteorological aspects of forest fires and their control.

Unit V

Climatic change, green house effect, CO₂ increase, global warming and their impact on agriculture; climate classification, agro-climatic zones and agro-ecological regions of India.

VI. Practical

- Preparation of crop weather calendars

- Development of simple regression models for weather, pest and disease relation in different crops.
- Preparation of weather based agro-advisories
- Use of automated weather station (AWS)

VII. Teaching methods/activities

Classroom teaching and practical-classes, visit to Agromet Observatory

VIII. Learning outcome

Overall and basic knowledge on Agrometeorology

IX. Suggested Reading

- Bishnoi OP. 2007. *Principles of Agricultural Meteorology*. Oxford Book Co.
- Kakde JR. 1985. *Agricultural Climatology*. Metropolitan Book Co.
- Mahi and Kingra. 2014. *Fundamentals of agrometeorology*. Kalyani publishers.

|-------------|--------------------------|----------|-----------------------------------|
| I. | Course Title | : | Crop-weather Relationships |
| II. | Course Code | : | AGM 503 |
| III. | Credit Hours | : | 2+0 |
| IV. | Aim of the course | | |

To study and understand the role of weather on crop growth and development.

V. Theory

Unit I

Understanding the influence of weather elements on crop growth, impact of natural and induced variability of climate on crop production.

Unit II

Climatic requirements of major crops, temperature effect on crop growth, radiation impact and radiation utilization efficiency, humidity effect on crop performance, effect of soil temperature on seed germination and root growth, wind variation and crop growth.

Unit III

Meteorological indices to predict crop production, Interpretation of weather forecasts for various agricultural operations towards improved productivity, crop-weather relationship in dryland areas. Crop weather relationship of major horticultural crops of the region and agroforestry system.

Unit IV

Rhizosphere and microorganisms in relation to weather, fertilizer and water use efficiency in relation to weather.

VI. Teaching methods/activities

Classroom teaching

VII. Learning outcome

To enhance the knowledge on intricate relationship between crop and weather.

VIII. Suggested Reading

- Bishnoi OP. 2007. *Principles of Agricultural Meteorology*. Oxford Book Co.
- Jerry L. Hatfield, Mannava VK, Sivakumar and John H. Prueger. 2017. *Agroclimatology: Linking Agriculture to climate*. Agronomy Monographs 60.

- I. Course Title : Agro-meteorological Measurements and Instrumentation**
- II. Course Code : AGM 504**
- III. Credit Hours : 1+2**

Aim of the course

To impart the theoretical and practical knowledge of instruments/equipments used for measurement of agro-meteorological variables.

IV. Theory

Unit I

Fundamentals of measurement techniques; theory and working principles of barometer, thermometer, psychrometer, hair hygrometer, thermohygrograph; exposure and operation of meteorological instruments/equipments in agromet observatories.

Unit II

Radiation and temperature measuring instruments: working principles of albedometer, photometer, spectro-radiometer, sunshine recorder, dew recorder, quantum radiation sensors, pressure bomb apparatus, thermographs, and infrared thermometer.

Unit III

Precipitation and dew instruments: working principles of rain gauge, self recording rain gauge, Duvdevani dew gauges. Wind instruments: working principles of anemometer, wind vane, anemograph.

Unit IV

Evapotranspiration and photosynthesis instruments: working principles of lysimeters, open pan evaporimeters, porometer, photosynthesis system, leaf area meter.

Unit V

Boundary layer fluxes, Flux tower, soil heat flux plates, instruments to measure soil moisture and soil temperature.

Unit VI

Automatic weather station – data logger and sensors, nano-sensors for measurement of weather variables; computation and interpretation of data.

V. Practical

- Working with the above instruments in the meteorological observatory, fields and laboratory, Recording observations of relevant parameters.
- Computation and interpretation of the data.
- Analysis of AWS data.

VI. Teaching methods/activities

Mostly practical classes with demonstration and hands-on use of met-instruments

VII. Learning outcome

Practical classes and theory

Website

<https://public.wmo.int/en>

I. Course Title : Crop Micrometeorology

II. Course Code : AGM 505

III. Credit Hours : 2+1

IV. Aim of the course

To impart the theoretical and practical knowledge of physical processes occurring in lower atmosphere and within crop canopy concerning crop growth.

V. Theory

Unit I

Properties of atmosphere near the Earth's surface; exchange of mass momentum and energy between surface and overlying atmosphere, exchange coefficient, similarity hypothesis, shearing stress, forced and free convection.

Unit II

Molecular and eddy transport of heat, water vapour and momentum, frictional effects, eddy diffusion, mixing; zero plane displacement, temperature instability, eddy covariance technique, microclimate near the bare ground, unstable and inversion layers, variation in microclimate under irrigated and rainfed conditions, soil moisture and temperature variation with depth; Richardson number, Raymonds analogy, Exchange coefficients.

Unit III

Micrometeorology of plant canopies; distribution of temperature, humidity, vapour pressure, wind and carbon dioxide; modification of microclimate due to cultural practices, intercropping; radiation distribution and utilization by plant communities, leaf temperature and its biological effects; influence of topography on microclimate; shelter belts and wind breaks, microclimate in low plant area of meadows and grain fields, microclimate within forests, glass house and plastic house climates; instruments and measuring techniques in micrometeorology.

Unit IV

Effects of ambient weather conditions on growth, development and yield of crops; measurement of global and diffuse radiation; measurement of albedo over natural surfaces and cropped surfaces; net radiation measurement at different levels; PAR distribution in plant canopies and interception; wind, temperature and humidity profiles in (a) short crops and (b) tall crops; energy balance over crops and LAI and biomass estimation; remote sensing and its application in relation to micrometeorology.

VI. Practical

- Micrometeorological measurements in crop canopies
- Quantification of crop microclimate
- Determination of ET and its computation by different methods.

VII. Teaching methods/activities

Theory and practical classes

VIII. Learning outcome

Knowledge of microclimatic conditions governing crop growth

IX. Suggested Reading

- I. Course Title : Evapotranspiration and Soil Water Balance**
II. Course Code : AGM 506
III. Credit Hours : 2+1

IV. Aim of the course

To impart the theoretical and practical knowledge of ET estimation and determination of the components of soil water balance

V. Theory

Unit I

Energy concept of soil water, hydraulic conductivity and soil water flux; theory on hydraulic conductivity in saturated and unsaturated soils; physical factors concerning water movement in soil; concepts on evaporation, evapotranspiration, potential and actual evapotranspiration.

Unit II

Theories of evapotranspiration and their comparison; aerodynamic, eddy correlation, energy balance, water balance and other methods, their application under different agroclimatic conditions; concepts of potential, reference and actual evapotranspiration - modified techniques.

Unit III

Influence of microclimatic and cultural factors on soil water balance; techniques of lysimetry in measuring actual evapotranspiration. water use efficiency and scheduling of irrigation based on evapotranspiration; water use efficiency and antitranspirants, computation of Kc values and their use; irrigation scheduling based on climatological approaches.

Yield functions; water use efficiency and scheduling of irrigation based on evapotranspiration; dry matter yield ET functions; radiation instruments; advanced techniques for measurement of radiation and energy balance; estimation of evapotranspiration through remote sensing.

VI. Practical

- Measurement of various components of soil water balance
- Evaluation of hydraulic conductivity vs. soil moisture relationship by water balance approach
- Computation and comparison of evapotranspiration by different methods - energy balance method, aerodynamic method, Penman method, remote sensing and other methods
- Soil moisture retention characteristics by pressure plate method.

VII. Teaching methods/activities

Theory and practical classes

VIII. Learning outcome

To know the estimation procedures and interlinkages among different components of field water balance.

I. Course Title : Crop Weather Models

II. Course Code : AGM 507

III. Credit Hours : 1+2

IV. Aim of the course

To impart the theoretical and practical knowledge of various models for estimation of crop weather responses.

V. Theory

Unit I

Principles of crop production; effect of weather elements on crop responses; impact of natural and induced variability of climate on crop production.

Unit II

Introduction and application to crop modeling, types of models, Empirical and statistical crop weather models their application with examples; concept of crop growth model in relation to weather, soil, plant and other environmental related parameters and remote sensing inputs; growth and yield prediction models;

Unit III

Dynamic crop simulation models, e.g. DSSAT, InfoCrop, APSIM, CropSyst, etc.; optimization, calibration and validation of models. Weather data and physiology- based approaches to modeling of crop growth and yield; forecasting of pests and diseases; stochastic models; advantages and limitation of modeling.

VI. Practical

Working with statistical and simulation models, DSSAT models, InfoCrop, Oryza, etc.

VII. Teaching methods/activities

Theory and practical classes. Demonstration and hands-on practicals using crop models

VIII. Learning outcome

To utilize the crop weather model for observing weather influence on crop growth

I. **Course Title : Applied Agricultural Climatology**

II. **Course Code : AGM 508**

III. **Credit Hours : 1+2**

IV. **Aim of the course**

To impart the theoretical and practical knowledge of computation of different bio-parameters and their applications in the agriculture.

V. **Theory**

Unit I

Climatic statistics: measures of central tendency and variability, skewness, kurtosis, homogeneity, correlation, regression and moving averages; probability analysis using normal, binomial, Markov-chain and incomplete gamma distribution; parametric and non parametric tests; assessment of frequency of disastrous events.

Unit II

Precipitation indices; Climatic water budget: potential and actual evapotranspiration and their computation; measurement of precipitation, calculation of water surplus and deficit; computation of daily and monthly water budget and their applications; assessment of dry and wet spells, available soil moisture, moisture adequacy index and their applications.

Unit III

Thermal indices and phenology: cardinal temperatures; heat unit and growing degree day concepts for crop phenology, crop growth and development; insect-pest development; crop weather calendars; agroclimatic requirement of crops.

Unit IV

Bioclimatic concepts: evaluation of human comfort, comfort indices (temperature, humidity index and wind chill) and clothing insulation; climate, housing and site orientation; climatic normals for animal production.

VI. Practical

- Use of statistical approaches in data analysis
- Preparation of climatic water budget
- Estimation of agro-meteorological variables using historical records
- Degree day concept and phenology forecasting and preparation of crop calendar
- Evaluation of radiation, wind and shading effects in site selection and orientation
- Study of weather-pest and disease interactions, calculation of continentality factors; calculation of comfort indices and preparation of climograph.

VII. Teaching methods/activities

Theory and practical classes knowledge on how to use the meteorological observations and derived indices are applied in agricultural field

IX. Suggested Reading

I. **Course Title** : **Weather Forecasting**

II. **Course Code** : **AGM 509**

III. **Credit Hours** : **2+1**

IV. **Aim of the course**

To impart theoretical and practical knowledge of forecasting techniques used for weather prediction and preparation of agro-advisories.

V. **Theory**

Unit I

Weather forecasting system: definition, scope and importance; types of forecasting: short, medium and long-range; study of synoptic charts with special reference to location of highs and lows, jet streams, synoptic features and weather anomalies and zones of thermal advection and interpretation of satellite pictures of clouds in visible and infra-red range; weather forecasting network.

Unit II

Approaches for weather forecasts: methods of weather forecasts - synoptic,

numerical prediction, statistical, analogue, persistence and climatological approach, nano- technological approach, Indigenous Technical Knowledge (ITK) base- signals from flora, fauna, insects, birds, animals behavior; various methods of verification of location-specific weather forecast.

Unit III

Special forecasts: special forecasts for natural calamities such as drought, floods, high winds, cold (frost) and heat waves, hail storms, cyclones and protection measures against such hazards.

Unit IV

Modification of weather hazards: weather modification for agriculture; scientific advances in artificial rain making, hail suppression, dissipation of fog and stratus clouds, modification of severe storms and electric behavior of clouds.

Unit V

Weather based advisories: interpretation of weather forecasts for soil moisture, farm operations, pest and disease development and epidemics, crops and livestock production; preparation of weather-based advisories and dissemination.

VI. Practical

- Exercise on weather forecasting for various applications
- Preparation of weather-based agro-advisories based on weather forecast using various approaches and synoptic charts.

VII. Teaching methods/ activities

Theory and practical classes

VIII. Learning outcome

Enhancing knowledge on weather forecast and its use

IX. Suggested Reading

- I. Course Title : RS and GIS Applications in Agricultural Meteorology**
- II. Course Code : AGM 510**
- III. Credit Hours : 2+1**
- IV. Aim of the course**

To impart the theoretical and practical knowledge of remote sensing principles and their use to estimate agro-meteorological variables.

V. Theory

Unit I

Basic components of remote sensing- signals, sensors and sensing systems; active and passive remote sensing.

Unit II

Characteristics of electromagnetic radiation and its interaction with matter; spectral features of earth's surface features; remote sensors in visible, infrared and microwave regions.

Unit III

Imaging and non-imaging systems; framing and scanning systems; resolution of sensors; sensor platforms, their launching and maintenance. Drone technology.

Unit IV

Data acquisition system, data preprocessing, storage and dissemination; digital image processing and information extraction.

Unit V

Microwave remote sensing; visual and digital image interpretation; introduction to GIS and GPS.

Unit VI

Digital techniques for crop discrimination and identification; crop stress detection - soil moisture assessment, inventory of ground water and satellite measurement of surface soil moisture and temperature; drought

monitoring, monitoring of crop disease and pest infestation. Use of satellite data in weather forecasting.

Unit VII

Soil resource inventory; land use/land cover mapping and planning; integrated watershed development; crop yield modeling and crop production forecasting.

VI. Practical

- Acquisition of maps
- Field data collection
- Map and imagery scales
- S/W and H/W requirements and specifications for remote sensing
- Data products, their specifications, media types, data inputs, transformation, display types, image enhancement
- Image classification methods
- Evaluation of classification errors
- Crop discrimination and acreage estimations
- Differentiation of different degraded soils
- Time domain reflectometry
- Use of spectrometer and computation of vegetation indices
- Demonstration of case studies
- Hands on training

VII. Teaching methods/activities

Hands on practicals and theory

VIII. Learning outcome

Knowledge on RS-GIS technique for application in Agricultural Meteorology

I. Course Title : Strategic Use of Climatic Information

II. Course Code : AGM 514

III. Credit Hours : 2+1

IV. Aim of the course

To impart the theoretical and practical knowledge of climatic hazards and their mitigations.

V. Theory

Unit I

Increasing awareness on potential climate hazards and mitigations: history of climate-related disasters in the concerned continent/ region/ country/ sub-region and their documented or remembered impacts; Climatic hazards and extreme weather events (Cyclone, Hailstorm, drought, flood, etc.), Impact of climatic hazard on agricultural production; efforts made in mitigating impacts of (future) disasters (prevention); trends discernible in occurrence and character of disasters, if any.

Unit II

Selection of appropriate land use and cropping patterns: types and drivers of agricultural land use and cropping patterns based on climatic situation; history of present land use and cropping patterns in the sub-region concerned

as related to environmental issues; successes and difficulties experienced by farmers with present land use and cropping patterns; outlook for present land use and cropping patterns and possible alternatives from an environmental point of view.

Unit III

Adoption of preparedness strategies: priority settings for preparedness strategies in agricultural production; preparedness for meteorological disasters in development planning; permanent adaptation strategies that reduce the vulnerabilities to hazards; preparedness as a coping strategy.

Unit IV

Making more efficient use of agricultural inputs: agro-meteorological aspects of agricultural production inputs and their history; determination of input efficiencies based on weather conditions; other factors determining inputs and input efficiency; actual use of inputs in main land use and cropping patterns of the region.

Unit V

Adoption of microclimate modification techniques: review of microclimate management and manipulation methods; history of microclimate modification techniques practiced in the continent/ country/ sub-region concerned; possible improvements in adoption of microclimate modification techniques, given increasing climate variability and climate change; local trends in adoption of such techniques.

Unit VI

Protection measures against extreme climate: history of protection measures against extreme climate in the continent/ region/ country/ sub region concerned; successes and difficulties experienced by farmers with present protection measures; outlook for present protection measures and possible alternatives; trends in protection methods against extreme climate.

Practical

- Outlook for present land use and cropping patterns and possible alternatives from environmental point of view
- Recent trends in land use and cropping patterns
- Agro-meteorological services to increase farmers design abilities of land use and cropping patterns
- Systematic and standardized data collection on protection measures against extreme climate.

VI. Teaching methods/activities

Theory and practical classes

VII. Learning outcome

Application of climatic information for agriculture and natural resource management

VIII. Suggested Reading

<https://www.ncdc.noaa.gov/climate-information>

I. Course Title : Weather and Climate Risk Management

II. Course Code : AGM 515

III. Credit Hours : 2+0

IV. Aim of the course

To impart the theoretical and practical knowledge of weather modification techniques with risk management strategies

V. Theory

Unit I

Risk characterization – definitions and classification of risks; characterization of weather and climate related risks in agriculture; water related risks; radiation/heat related risks; air and its movement related risks; biomass related risks; social and economic risk factors related to weather and climate.

Unit II

Risks in agricultural production, history of weather and climate as accepted risk factors in agriculture in the continent/ region/ country/ sub-region concerned and the related documented risk concepts; preparedness for weather and climate risks.

Unit III

Risks of droughts; monitoring, prediction and prevention of drought; drought proofing and management; modern tools including remote sensing and GIS in monitoring and combating droughts.

Unit IV

Theories of weather modification; scientific advances in clouds and electrical behavior of clouds; hails suppression, dissipation of fog, modification of frost intensity and severe storms; shelter belts and wind breaks, mulches and anti-transpirants; protection of plants against climatic hazards; air and water pollution; meteorological conditions in artificial and controlled climates - green, plastic, glass and animal houses, etc.

Unit V

Approaches and tools to deal with risks - history of methods for weather and climate related risk assessments in the continent/ region/ country/ subregion concerned and their documented evidence of application to agricultural/farming systems; strategies of dealing with risks- mitigating practices before occurrence; preparedness for the inevitable; contingency planning and responses; disaster risk mainstreaming.

Unit VI

Perspectives for farm applications - farm applications not yet dealt with, such as making risk information products more client friendly and transfer of risk information products to primary and secondary users of such information; heterogeneity of rural people in education, income, occupation and information demands and consequences for risk information products and their transfer; livelihood-focused support, participation and community perspectives; challenges for developing coping strategies including transferring risks through insurance schemes.

Unit VII

Challenges to coping strategies-combining challenges to disaster risk mainstreaming, mitigation practices, contingency planning and responses, basic preparedness; preparedness approaches reducing emergency relief necessities; the role that insurances can play in risk spreading and transfer;

application of methods that permit the incorporation of seasonal and long-term forecasts into the risk assessment models.

VI. Teaching methods/ activities

Theory classes

VII. Learning outcome

Knowledge on different weather extremes and how to modify weather to reduce risk.

Website

- <https://www.icrisat.org/>

I. Course Title : Aerobiometeorology

II. Course Code : AGM 516

III. Credit Hours : 2+1

IV. Aim of the course

To impart theoretical knowledge on insect, pest and plant biometeorology

V. Theory

Unit I

Definition and structure of Aerobiometeorology, role of Agrometeorology and Biogeography in forecasting pests and disease outbreak, insect movement in the atmosphere, intensification, Effect of weather and climate parameters on reproduction, growth, development, movements, food, habitat and dispersal of pests and diseases. Influence of weather and climate on Migratory pests (Desert locust, BPH etc.).

Unit II

Benevolent and malevolent weather conditions for salient pests & diseases of the

concerned agro-climatic zones. Effects of sudden weather changes and extreme

weather conditions on population built-up of the pest, heat stress and heat related mortality, climate change impact on pest and diseases.

Unit III

Biometeorology in integrated pest and disease management program, modification of plant canopy and its impact of plant diseases, management of segments of disease triangle: environment manipulation and host manipulation, weather based forewarning system for pest and diseases.

Unit IV

Soil borne pathogens, their biology, management and challenges, soil borne diseases and their control, abiotic factor in soil borne disease management, Managing of pests & diseases in controlled environment, Environmental management for pest and disease

VI. Practical

- Identification of different pests
- Pest population, observations and their index calculation
- Identification of various diseases
- Disease initiation and their intensity, percent disease index
- Relation between weather parameters and pests and disease

VII. Teaching methods/activities

Classroom teaching and practical, visit to fields

VIII. Learning outcome

Knowledge on interactions between atmospheric processes and living

organisms, mainly pest and diseases

IX. Suggested Reading

Course Title with Credit Load for Ph.D in Agricultural Meteorology

Course Code	Course Title	Credit Hours
AGM601*	Climate change and sustainable development	2+1
AGM602	Meteorology of air pollution	2+2
AGM603	Livestock and fisheries meteorology	2+2
AGM604	Hydrometeorology	2+1
AGM605	Analytical tools and methods for Agro-meteorology	1+1
AGM606	Research and publication ethics	2+0
AGM607	Environmental Physics for Agricultural Meteorology	3+0
AGM608*	Computer Programs and Software for Agrometeorological data Management	1+1
AGM691	Doctoral seminar	1+0
AGM692	Doctoral seminar	1+0
AGM699	Doctoral research	75

*Indicates core courses for PhD

I. Course Title : Climate Change and Sustainable Development

II. Course Code : AGM 601

III. Credit Hours : 2+1

IV. Aim of the course

To impart the theoretical and practical knowledge of climate change and the cause, effect, mitigation of climate change.

V. Theory

Unit I

Climate change and global warming: definitions of terms; causes of climate change and global warming; greenhouse gases, ozone depletion; past records, present trends, extreme weather events and future projections; Case studies on various climatic projections and consequences thereof in relation to agriculture.

Unit II

Impacts of climate change on various systems: impacts resulting from projected changes on agriculture and food security; hydrology and water resources; terrestrial and freshwater ecosystems; coastal zones and marine ecosystems; human health; human settlements, energy, and industry; insurance and other financial services; climate change and crop diversification, loss of biodiversity, microbes and pest dynamics; climate change and storage, climate change and weed management. Advance methodology of assessing the impact of climate change on crops.

Unit III

Sensitivity, adaptation and vulnerability: system's sensitivity, adaptive capacity and vulnerability to climate change and extreme weather events; regional scenarios of climate change and variability.

Unit IV

Mitigation strategies for sustainable development: international policies, protocols, treaties for reduction in greenhouse gases and carbon emissions; carbon sequestration; carbon credit; Clean Development Mechanism (CDM) and land use, Crop management options for low emission, land use change and forestry mechanism, alternate energy sources, etc.

Unit V

Agricultural food security: reduction in carbon and GHG emission; fuel conservation and reduction in energy use, conservation tillage, biofuels for fossil fuels, reduction in machinery use etc; increasing carbon sinks; resource conservation technologies, mixed rotations of cover and green manure crops, minimization of summer fallow and no ground cover periods, etc.

VI. Practical

- Case studies on various climatic projections and consequences thereof in relation to agriculture
- Advance methodology of assessing the impact of climate change on crops

VII. Teaching methods/ activities

Classroom teaching, showing climatic models (GCMs and RCMs) through PPT, Hands-on practical

VIII. Learning outcome

Will be aware on causes, impacts, mitigation and adaptations to climate change in the field of agriculture

IX. Suggested Reading

I. Course Title : Meteorology of Air Pollution

II. Course Code : AGM 602

III. Credit Hours : 2+2

IV. Aim of the course

To impart the theoretical and practical knowledge of air pollutants.

V. Theory

Unit I

Introduction to air pollution- history, definition: clean air definition; natural versus polluted atmosphere; atmosphere before the industrial revolution, Real time air quality index and National air quality index.

Unit II

Sources of air pollution; classification and properties of air pollutants; emission sources, importance of anthropogenic sources; behaviour and fate of air pollutants; photochemical smog; pollutants and trace gases. Acid rain and development of Gas Washing

Unit III

Meteorological factors in the dispersion of air pollutants; topographical, geographical and large scale meteorological factors attached air pollution; Planetary Boundary Layer (PBL) and mixing layer; meteorological conditions and typical plume forms; air pollution forecasting – Gaussian diffusion models, Numerical dispersion models.

Unit IV

Air quality standards; effect of air pollution on biological organisms; ozone layer depletion; air pollution control technologies; management of air pollution; principles of diffusion of particulate matter in the atmosphere; air pollution laws and standards. Scales of air pollution: local, urban, regional, continental and global.

Unit V

Air pollution sampling and measurement: types of pollutant sampling and measurement, ambient air sampling, collection of gaseous air pollutants, collection of particulate pollutants, stock sampling; analysis of air pollutants - sulfur dioxide, nitrogen dioxide, carbon monoxide, oxidants and ozone, hydrocarbons, particulate matter.

VI. Practicals

- Measurement of different air pollutants
- Measurement of different air pollution gases
- Measurement of visibility
- Measurement of ozone and aerosol optical thickness (AOT)
- To study the temperature profile at different heights
- To study the stability of the atmosphere
- To determine height of partial flume through chimani
- To study the effect of temperature on vegetables, orchards and agricultural crops

VII. Teaching methods/activities

Classroom teaching and practical

VIII. Learning outcome

Knowledge of sources and dispersal of pollutants, meteorological activities and analysis of pollutants

IX. Suggested Reading

I. Course Title : Livestock and Fisheries Meteorology

II. Course Code : AGM 603

III. Credit Hours : 2+2

IV. Aim of the course

To impart the theoretical and practical knowledge of weather, climate for livestock and fisheries management.

V. Theory

Unit I

Thermal balance in animals; energy exchange processes at the skin of the animals and the need for the maintenance of thermal balance in the animals. Animal traits and physiological responses.

Unit II

Effects of weather on animal production, loss of water from the body, growth rate and body weight, reproduction, grazing habit, food intake, milk production, sun burns and photosensitive disorders.

Unit III

Meteorological conditions prevailing in glass-house, green house, animal shed, poultry house and grain storage barns; heating, cooling and ventilation of these structures as governed by meteorological factors. Environmental modification within the shelters of livestock. Applications of biometeorological information for rational planning, design and management. Weather and animal diseases and parasites; diseases of poultry and its relation with weather and thermal comfort.

Unit IV

Livestock production and climate change, Management of livestock to reduce greenhouse gas emission.

Unit V

Weather effect on fish behaviour. Water temperature affecting fish activity. Marine weather and fishing. Climate change and fisheries production.

VI. Practical

- Measurement of meteorological parameters within the shelters of livestock
- Calculation of animal comfort zone index
- Radiation of animal farm house and body
- Estimation of energy fluxes on body
- Measurements of CO₂ and methane in animal farm house.

VII. Teaching methods/activities

Class room teaching for theory part, visit to farm house for practical

VIII. Learning outcome

Enhanced knowledge on weather influence on livestock and farm environment

IX. Suggested Reading

I. Course Title : Hydrometeorology

II. Course Code : AGM 604

III. Credit Hours : 2+1

IV. Aim of the course

To impart the theoretical and practical knowledge of different components of hydrologic cycle.

v. Theory

Unit I

Hydrologic cycle and its modification; rainfall and its interception by plants and crops. Interpolation and measurement of missing rainfall data; adequacy of rain gauges; average rainfall on an area depth basis; presentation and processing of precipitation data.

Unit II

Measurement of runoff, infiltration, moisture retention of soil, percolation, evaporation, evapotranspiration and its importance to agriculturists, irrigation engineers and flood forecasting personnel; water holding capacity of soils, plant available water, cultural practices on soil moisture in relation to different phases of crop growth; evaporation from snow, lakes, reservoirs and crop fields.

Unit III

Classifying rainfall data into class interval; ranking of rainfall data; relationship between intensity and duration; methods of predicting runoff rate; factors affecting runoff; rainfall-runoff relation; estimation of evapotranspiration from water balance methods; response of crops to water stresses under different agroclimatic situation on India.

Unit IV

Moisture availability indices and their application for Indian condition; wet and dry spell by Markov-chain model; drought and its classification, hydrological drought, drought indices and their applications under Indian conditions.

VI. Practical

- Analysis of rainfall data
- Determination of effective rainfall
- To estimate missing rainfall data for a given station.
- To find out the optimum number of rain gauges for a given catchment.
- To find out the mean rainfall for a given drainage basin by Thiessen polygon method and isohyetal method.
- To estimate the volume of runoff by SCS method.
- Estimation of evapotranspiration from field based water balance method.

VII. Teaching methods/activities

Theory and practical classes

VIII. Learning outcome

Knowledge on rainfall analysis, runoff estimation, calculation of evaporation and the relationship among different hydrological parameters

IX. Suggested Reading

I. Course Title : Analytical Tools and Methods for Agro-meteorology

II. Course Code : AGM 605

III. Credit Hours : 1+1

IV. Aim of the course

To impart the theoretical and practical knowledge of new tools for analysis of agro-climatic features.

v. Theory

Unit I

Review of agro-climatic methods; characterization of agroclimatic elements; sampling of atmosphere; temporal and spatial considerations; micro-meso-macro climates.

Unit II

Network spacing; spatial and temporal methods; GIS fundamentals and applications; numerical characterization of climatic features; crop response to climate, time lags, time and distance constants, hysteresis effects.

Unit III

Influence of climate on stress-response relations; thermal time approach in agroclimatology- heat and radiation use efficiency in crop plants; applications to insect-pest development and prediction; comfort indices for human and animals;

impact of natural and induced variability and change of climate on crop production.

Unit IV

Instrumentation and sampling problems; design of agro-meteorological experiments.

Unit V

Basic knowledge of application of computers in agriculture; theories of computer language BASIC, FORTRAN, C, C++ and Visual basic.

Unit VI

Empirical and statistical crop weather models and their application with examples; incorporating weather, soil, plants and other environment related parameters as subroutine and remote sensing inputs in models; growth and yield prediction models; crop simulation models; forecasting models for insects and diseases.

VI. Practical

- Calculation of continentality factors.
- Climatic indices and climogram.
- Agrometeorological indices: Degree-days, photothermal units, heliothermal units, phenothermal index.
- Heat and radiation use efficiency and other indices of crops.
- Crop growth rates.
- Analysis of thermogram, hygrogram, hyetogram, sunshine cards etc. stream lines and wind roses and statistical analysis of climatic data.
- Working with statistical models: crop yield forecasting, crop weather relationship and insect & disease forecasting models.
- Working with crop simulation models
- Small programme writing in computer languages like BASIC, FORTRAN, C, C++ and Visual basic.
- Geographical Information System.

VII. Teaching methods/activities

Theory and practical classes, learning of computer language

VIII. Learning outcome

Knowledge on collection of agromet data, sampling design for agrometeorology, calculation of different indices and analysis of data

IX. Suggested Reading

- Cooper M. 2006. *The Spirit of C. An Introduction to Modern Programming*. Jaico Publ.
- Malczewski J. 1999. *GIS & Multicriteria Decision Analysis*. John Wiley & Sons.

I. **Course Title : Research and Publication Ethics**

II. **Course Code : AGM 606**

III. **Credit Hours : 2+0**

IV. **Theory**

Unit I

Introduction to philosophy: definition, nature and scope, concept, branches

Unit II

Ethics: definition, moral philosophy, nature of moral judgements and reactions

Unit III

Scientific conduct: Ethics with respect to science and research, intellectual honesty and research integrity, Scientific misconducts- falsifications, fabrications and plagiarism (FFP): Redundant publications: duplicate and overlapping publications, salami slicing; selective reporting and misrepresentation of data

Unit IV

Publication ethics: Definition, introduction and importance. Best practices/ standard setting initiatives and guidelines: COPE, WAME etc., conflicts of interest. Publication misconduct: definition, concept, problems that lead to unethical behaviour and vice versa, type, violation of publication ethics, authorship and contributorship, Identification of publication misconduct, complaints and appeals, predatory publishers and journals

Unit V

Open access publishing: open access publication and initiatives: SHERPA, RoMEO online resource to check publisher copy right and self archiving policies; software tool to identify predatory publications developed by SPPU, Journal finder/journal suggestions tools, viz., JANE, Elsevier Journal Finder, Springer Journal Suggester etc.

Unit VI

Publication misconduct: Group discussions- subject specific ethical issues, FFP, authorship, conflicts of interest, complaints and appeals examples and fraud from India and abroad. Software tools: Use of plagiarism software like Turnitin, Urkund and other open source software tools.

Unit VII

Database and Research metrics: Indexing data base, citation database, web of science, scopus, etc. Impact factor of journal as per journal citation report, SNIP, SJR, IPP, Cite Score; Metrics: h-index, Gindex, i 10 index altmetrics

V. Teaching methods/activities

Classroom teaching and field and laboratory activities

VI. Learning outcome

To familiarize the students about field and laboratory activities to be performed during the study period

I. Course Title : Weather and Climate Risk Management

II. Course Code : AGM 607

III. Credit Hours : 3+0

IV. Aim of the course

To impart the theoretical knowledge of Physics applied to atmosphere and meteorology

V. Theory

Unit I

Thermodynamics of the atmosphere. Physics of radiation: origin and nature of radiation, radiation geometry in Cartesian, spherical cylindrical coordinate systems, conservation principles for radiant energy; fluid motion: laminar and turbulent transfer, fluctuation theory for turbulent transfer of momentum, heat and water vapour.

Unit II

Physics of evaporation: aerodynamic approach, energy balance approach and

combination approach for evaporation estimates.

Unit III

Physics of soil water system: the concept of potential as applied to soil water system, total potential and components, movements of water on soil, fundamental equation, hydraulic conductivity, infiltration, field drainage and water vapour movement in soil.

Unit IV

Physics of water use: a physical introduction to plant-water system and relationships, water transport through soil-plant-atmosphere systems, measurement of crop water use in terms of water conservation equation.

VI. Teaching methods/activities

Classroom teaching

VII. Learning outcome

Knowledge and application of physical laws governing the agrometeorological parameters

VIII. Suggested Reading

- Hillel D. 1971. *Soil and Water*. Academic Press.

I.	Course Title	:	Computer Programs and Software for Agrometeorological Data Management
II.	Course Code	:	AGM 608
III.	Credit Hours	:	1+1

IV. Aim of the course

To impart knowledge on management of agromet data and train the students in commercialization of agrometeorological data through e-services.

V. Theory

Unit I

Data and information; types of data; climate, soil and crop data; Importance of database management, Softwares related to database management; data requirements; data collection and recording (Automatic and manual).

Unit II

Data structure/format; quality control of data through computer software; techniques of climatic data generation; missing data; introduction to different software for database management.

Unit III

Processing and analysis of data and data products; value addition of data and data products; data users, public, commercial, academic or research. Availability, accessibility and security of data; evaluating the cost of data; e-management of data. Meta analysis: Advantages and problems, Steps, Approaches and methods, Applications.

Unit IV

Computer Programming: History, Quality requirements, Readability of source code, Algorithmic complexity, Debugging, Programming languages

VI. Practical

- Types of instruments and data recording
- AWS data retrieval, storage and transfer
- Exposure to different software for Agromet data analysis; exposure to Statistical software
- Temporal and spatial analysis of data; exposure to GIS
- Value addition to data
- Introduction to internet protocols
- Uploading and downloading data, password and security of data
- E-management of data
- Introduction to computer programming

VII. Teaching methods/activities

Hands on practical and theory

VIII. Learning outcome

Learning computer programming to manage and analyze agromet data

*Compulsory Major Courses

- I. Course Title : Principles of Genetics***
II. Course Code : GPB 501
III. Credit Hours : 3 (2+1)
IV. Why this course?

Genes are the backbone of all crop improvement activities. Their chemical structure and physical inheritance are pivotal for any breeding program. Therefore, it has to be the core course for master's degree in Genetics and Plant Breeding.

V. Aim of the course

This course is aimed at understanding the basic concepts of inheritance of genetic traits, helping students to develop their analytical, quantitative and problem-solving skills from classical to molecular genetics.

VI. Theory

Unit I

Beginning of genetics, early concepts of inheritance, Mendel's laws; Discussion on Mendel's paper, Chromosomal theory of inheritance; Multiple alleles, Gene interactions, Sex determination, differentiation and sex-linkage, Sex-influenced and sex-limited traits; Linkage-detection, estimation; Recombination and genetic mapping in eukaryotes, Somatic cell genetics, Extra chromosomal inheritance.

Unit II

Mendelian population, Random mating population, Frequencies of genes and genotypes, Causes of change: Hardy-Weinberg equilibrium.

Unit III

Nature, structure and replication of the genetic material; Organization of DNA in chromosomes, Genetic code; Protein biosynthesis, Genetic fine structure analysis, Allelic complementation, Split genes, overlapping genes, Pseudogenes, Oncogenes, Gene families and clusters; Regulation of gene activity in prokaryotes and eukaryotes; Molecular mechanisms of mutation, repair and suppression; Bacterial plasmids, insertion (IS) and transposable (Tn) elements; Molecular chaperones and gene expression, RNA editing.

Unit IV

Gene isolation, synthesis and cloning, genomic and cDNA libraries, PCR based cloning, positional cloning; Nucleic acid hybridization and immunochemical detection; DNA sequencing; DNA restriction and modification, Anti-sense RNA and ribozymes; Micro-RNAs (miRNAs).

Unit V

Genomics and proteomics; metagenomics; Transgenic bacteria and bioethics; Gene silencing; genetics of mitochondria and chloroplasts. Concepts of Eugenics, Epigenetics, Genetic disorders.

VII. Practical

- Laboratory exercises in probability and chi-square;
- Demonstration of genetic principles using laboratory organisms;
- Chromosome mapping using three-point test cross;
- Tetrad analysis; Induction and detection of mutations through genetic tests;
- DNA extraction and PCR amplification;
- Electrophoresis: basic principles and running of amplified DNA;
- Extraction of proteins and isozymes;
- Use of *Agrobacterium* mediated method and Biolistic gun;
- Detection of transgenes in the exposed plant material;
- Visit to transgenic glasshouse and learning the practical considerations.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After passing out this course the student will be able to know the difference between the genotype and phenotype, can carry study on inheritance and also know the role of DNA and RNA in genotypic manifestation of characters.

I. **Course Title** : **Principles of Plant Breeding***

II. **Course Code** : **GPB 502**

III. **Credit Hours** : **3(2+1)**

IV. **Why this course?**

Development of plant variety is the ultimate aim of any plant breeding program. A post graduate in the subject of agriculture must know what are the different selection methods, techniques and related crop improvement strategies. Further, knowledge of genetic resources, evolution and their role in development of noble varieties is the need of the hour.

V. **Aim of the course**

To impart theoretical knowledge and practical skills about plant breeding objectives, genetic consequences, breeding methods for crop improvement.

VI. **Theory**

Unit I

Early Plant Breeding; Accomplishments through plant breeding; Objectives of plant breeding; Patterns of Evolution in Crop Plants: Centre of Origin, Agro-biodiversity and its significance. Pre-breeding and plant introduction and role of plant genetic resources in plant breeding.

Unit II

Genetic basis of breeding: self and cross pollinated crops including mating systems and response to selection; Nature of variability, components of variation; Heritability and genetic advance, genotype environment interaction;

General and specific combining ability; Types of gene actions and implications in plant breeding.

Unit III

Pure line theory, pure line and mass selection methods; pedigree, bulk, backcross, single seed descent and multiline breeding; Population breeding in self-pollinated crops with special reference to diallel selective mating; Transgressive breeding.

Unit IV

Breeding methods in cross pollinated crops; Population breeding: mass selection and ear-to-row methods; S_1 and S_2 progeny testing, progeny selection schemes, recurrent selection schemes for intra and inter-population improvement and development of synthetics and composites. Hybrid breeding: genetical and physiological basis of heterosis and inbreeding, production of inbreds, breeding approaches for improvement of inbreds, predicting hybrid performance; seed production of hybrid and their parent varieties/ inbreds. Self-incompatibility, male sterility and apomixes in crop plants and their commercial exploitation.

Unit V

Breeding methods in asexually/ clonally propagated crops, clonal selection.

Unit VI

Special breeding techniques: Mutation breeding, Breeding for abiotic and biotic stresses; Concept of plant ideotype and its role in crop improvement, concept of MAS, concept of polyploidy and wide hybridization, doubled haploidy.

Unit VII

Cultivar development: testing, release and notification, maintenance breeding, Participatory Plant Breeding, Plant breeders' rights and regulations for plant variety protection and farmers rights.

VII. Practical

- Floral biology in self and cross pollinated species;
- Selfing and crossing techniques;
- Selection methods in segregating populations and evaluation of breeding material;
- Analysis of variance (ANOVA);
- Estimation of heritability and genetic advance;
- Maintenance of experimental records;
- Learning techniques in hybrid seed production using male-sterility in field crops;

- Prediction of performance of double cross hybrid.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

The knowledge of this course will enable the student to know breeding methods, different hybridization techniques for genomic reshuffling. The course will also acquaint the student with importance of floral biology, mutation breeding and participatory plant breeding, etc.

- I. **Course Title** : **Fundamentals of Quantitative Genetics***
II. **Course Code** : **GPB 503**
III. **Credit Hours** : **3 (2+1)**
IV. **Why this course?**

Yield and quality characters are controlled by many genes and show the quantitative inheritance. If one has to go for improvement even for the components characters the knowledge of this course is very essential.

V. **Aim of the course**

To impart theoretical knowledge and computation skills regarding components of variation and variances, scales, mating designs and gene effects.

VI. **Theory**

Unit I

Introduction and historical background of quantitative genetics, Multiple factor hypothesis, Qualitative and quantitative characters, Analysis of continuous variation mean, range, SD, CV; Components of variation- Phenotypic, Genotypic, Nature of gene action- additive, dominance and epistatic, linkage effect. Principles of analysis

of variance and linear model, Expected variance components, Random and fixed effect model, Comparison of means and variances for significance.

Unit II

Designs for plant breeding experiments- principles and applications; Variability parameters, concept of selection, simultaneous selection modes and selection of parents, MANOVA.

Unit III

Association analysis- Genotypic and phenotypic correlation, Path analysis Discriminate function and principal component analysis, Genetic divergence analysis- Metroglyph and D^2 , Generation mean analysis, Parent progeny regression analysis

Unit IV

Mating designs- classification, Diallel, partial diallel, $L \times T$, NCDs, and TTC; Concept of combining ability and gene action, $G \times E$ interaction- Adaptability and stability; Methods and models for stability analysis; Basic models- principles and interpretation, Bi-plot analysis.

Unit V

QTL mapping, Strategies for QTL mapping- Desired population and statistical methods, QTL mapping in genetic analysis; Markers, Marker

assisted selection and factors influencing the MAS, Simultaneous selection based on marker and phenotype.

VII. Practical

- Analysis and interpretation of variability parameters;
- Analysis and interpretation of Index score and Metroglyph;
- Clustering and interpretation of D² analysis;
- Genotypic and phenotypic correlation analysis and interpretation;
- Path coefficient analysis and interpretation, Estimation of different types of heterosis, inbreeding depression and interpretation;
- A, B and C Scaling test;
- L × T analysis and interpretation, QTL analysis;
- Use of computer packages;
- Diallel analysis;
- G × E interaction and stability analysis.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures,
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After studying this course, the student will be equipped with the knowledge of additive dominance and epistatic gene action. He will also be introduced with the various designs for analysis of genotypic and phenotypic variance and QTL mapping.

- I. **Course Title** : **Varietal Development and Maintenance Breeding**
II. **Course Code** : **GPB 504**
III. **Credit Hours** : **2(1+1)**

IV. **Why this course?**

It is an indispensable course which apprise the students about various practices and procedures in the development of a variety and steps to maintain the purity of varieties/ hybrids. Further, it provides basics of nucleus and breeder seed production techniques.

V. **Aim of the course**

The purpose of this course is to make students well acquainted with the techniques and procedures of varietal development. He will be associated with development of variety so the course aims is to provide knowledge on DUS testing, protocols of various breeding techniques, procedures of release of variety, maintenance of the variety and production of nucleus and breeder seed of variety/ hybrids.

VI. **Theory**

Unit I

Variety Development systems and Maintenance; Definition- variety, cultivar, extant variety, essentially derived variety, independently derived variety, reference variety, farmers' variety, landraces, hybrid, and population; Variety testing, release and notification systems and norms in India and abroad.

Unit II

DUS testing- DUS Descriptors for major crops; Genetic purity concept and maintenance breeding. Factors responsible for genetic deterioration of varieties - safeguards during seed production.

Unit III

Maintenance of varieties in self and cross pollinated crops, isolation distance; Principles of seed production; Methods of nucleus and breeder seed production; Generation system of seed multiplication -nucleus, breeders, foundation, certified.

Unit IV

Quality seed production technology of self and cross-pollinated crop varieties, viz., cereals and millets (wheat, barley, paddy, pearl millet, sorghum, maize and ragi, etc.); Pulses (green gram, black gram, cowpea, pigeon pea, chickpea, field pea, lentil); Oilseeds (groundnut, soybean, sesame, castor, sunflower, safflower, linseed, rapeseed and mustard); fibres (cotton/ jute) and forages (guar, forage sorghum, teosinte, oats, berseem, lucerne).

Unit V

Seed certification procedures; Seed laws and acts, plant variety protection regulations in India and international systems.

VII. Practical

- Identification of suitable areas/ locations for seed production;
- Ear-to-row method and nucleus seed production;
- Main characteristics of released and notified varieties, hybrids and parental lines;
- PGMS and TGMS;
- Identification of important weeds/ objectionable weeds;
- Determination of isolation distance and planting ratios in different crops; Seed production techniques of varieties in different crops;
- Hybrid seed production technology of important crops;
- DUS testing and descriptors in major crops;
- Variety release proposal formats in different crops.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

Pass out student will have complete knowledge on the various procedures linked with the development and release of variety. This course will also enable student how to maintain and multiply variety for large scale distribution. It will also make student acquainted with the seed laws and acts related to plant variety protection.

I. **Course Title** : **Principles of Cytogenetics**

II. **Course Code** : **GPB 505**

III. **Credit Hours** : **3 (2+1)**

IV. Why this course?

The very purpose of this course is to acquaint the students with cell cycle and architecture of chromosome in prokaryotes and eukaryotes, special types of chromosomes, techniques for karyotyping. This course aims to impart knowledge of variations in chromosomes numbers and their structures. It acquaints the students for the production and use of haploids, apomictic populations and their role in genetics and breeding.

V. Aim of the course

To provide insight into structure and functions of chromosomes, chromosome mapping, polyploidy and cytogenetic aspects of crop evolution.

VI. Theory

Unit I

Cell cycle and architecture of chromosome in prokaryotes and eukaryotes; cell organelles- ultra structure and functions Chromonemata, chromosome matrix, chromomeres, centromere, secondary constriction and telomere ; Special types of chromosomes. Variation in chromosome structure: Evolutionary significance; Introduction to techniques for karyotyping; Chromosome banding and painting -*In situ* hybridization and various applications.

Unit II

Structural and numerical variations of chromosomes and their implications; Symbols and terminologies for chromosome numbers, euploidy, haploids, diploids and polyploids; Utilization of aneuploids in gene location; Variation in chromosome behaviour, somatic segregation and chimeras, endomitosis and somatic reduction; Evolutionary significance of chromosomal aberrations, balanced lethal and chromosome complexes; Inter-varietal chromosome substitutions.

Unit III

Fertilization barriers in crop plants at pre-and postfertilization levels; *In-vitro* techniques to overcome the fertilization barriers in crops; Polyploidy. Genetic consequences of polyploidization and role of polyploids in crop breeding; Evolutionary advantages of autopolyploid vs allopolyploids; Role of aneuploids in basic and applied aspects of crop breeding, their maintenance and utilization in gene mapping and gene blocks transfer; Alien addition and substitution lines, creation and utilization; Apomixis, evolutionary and genetic problems in crops with apomixes.

Unit IV

Reversion of autopolyploid to diploids; Genome mapping in polyploids; Interspecific hybridization and allopolyploids; Synthesis of new crops (wheat, *Triticale*, *Brassica*, and cotton); Hybrids between species with same chromosome number, alien translocations; Hybrids between species with different chromosome number; Gene transfer using amphidiploids, bridge species.

Unit V

Chromosome manipulations in wide hybridization; case studies; Production and use of haploids, dihaploids and doubled haploids in genetics and breeding.

VII. Practical

- Learning the cytogenetical laboratory techniques, various chemicals to be used for fixation, dehydration, embedding, staining, cleaning, etc.;
- Microscopy: various types of microscopes;
- Preparing specimen for observation;
- Fixative preparation and fixing specimen for light microscopy studies in cereals;
- Studies on mitosis and meiosis in crop plants;
- Using micrometres and studying the pollen grain size in various crops. Pollen germination *in vivo* and *in-vitro*;
- Demonstration of polyploidy.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

The course will provide full knowledge to the student on the various procedures linked with cell development and chromosome structure and function. This course will also enable student how to tailor and utilize the variation in chromosome number and structures in the development and synthesis of new species and varieties.

I. **Course Title : Molecular Breeding and Bioinformatics***

II. **Course Code : GPB 506**

III. **Credit Hours : 3(2+1)**

IV. **Why this course?**

The course will provide deep knowledge to the students on genotyping and kinds of markers including biochemical and molecular, mapping populations, allele mining. This will also add ways to perform marker-assisted selection and gene pyramiding to evolve superior varieties.

V. **Aim of the course**

To impart knowledge and practical skills to use innovative approaches and Bioinformatics in Plant Breeding.

VI. **Theory**

Unit I

Genotyping; Biochemical and Molecular markers; Morphological, biochemical and DNA-based markers (RFLP, RAPD, AFLP, SSR, SNPs, ESTs, etc.), Functional markers; Mapping populations (F₂s, back crosses, RILs, NILs and DH); Molecular mapping and tagging of agronomically important traits; Statistical tools in marker analysis.

Unit II

Allele mining; Marker-assisted selection for qualitative and quantitative traits; QTLs analysis in crop plants; Marker-assisted backcross breeding for rapid introgression; Genomics- assisted breeding; Generation of EDVs;

Gene pyramiding.

Unit III

Introduction to Comparative Genomics; Large scale genome sequencing strategies; Human genome project; Arabidopsis genome project; Rice genome project; Comparative genomics tools; Introduction to proteomics; 2D gel electrophoresis; chromatography and sequencing by Edman degradation and mass spectrometry; Endopeptidases; Nanotechnology and its applications in crop improvement.

Unit IV

Recombinant DNA technology, transgenes, method of transformation, selectable markers and clean transformation techniques, vector-mediated gene transfer, physical methods of gene transfer; Production of transgenic plants in various field crops: cotton, wheat, maize, rice, soybean, oilseeds, sugarcane, etc. and commercial releases; Biotechnology applications in male sterility/ hybrid breeding, molecular farming; Stress resistance breeding, introductory basics of gene editing technologies like CRISPR-CAS, ZFN, TALENS etc. and gene silencing technologies like antisense RNA technology, microRNA ; Application of Tissue culture in molecular breeding; MOs and related issues (risk and regulations); GMO; International regulations, biosafety issues of GMOs; Regulatory procedures in major countries including India, ethical, legal and social issues; Intellectual property rights

Unit V

Introduction to bioinformatics: bioinformatics tools, biological data bases (primary and secondary), biological data storage sites, data searching and retrieving, synteny and its applications, identification of desired gene sequences, implications in crop improvement.

VII. Practical

- Requirements for plant tissue culture laboratory;
- Techniques in plant tissue culture;
- Media components and media preparation;
- Aseptic manipulation of various explants, observations on the contaminants occurring in media, interpretations;
- Inoculation of explants, callus induction and plant regeneration; Standardizing the protocols for regeneration;
- Hardening of regenerated plants; Establishing a greenhouse and hardening procedures;
- Visit to commercial micropropagation unit;

- Transformation using *Agrobacterium* strains;
- GUS assay in transformed cells/ tissues;
- DNA isolation, DNA purity and quantification tests;
- Gel electrophoresis of proteins and isozymes, PCR-based DNA markers, gel scoring and data analysis for tagging and phylogenetic relationship;
- Construction of genetic linkage maps using computer software;
- NCBI Genomic Resources, GBFF, Swiss Prot, Blast n/ Blast p, Gene PredictionTool, Expasy Resources, PUBMED and PMC, OMIM and OMIA, ORF finder;
- Comparative Genomic Resources: - Map Viewer (UCSC Browser and Ensembl);
- Primer designing- Primer 3/ Primer BLAST.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning Outcome

The knowledge of this course will enable the student to know about various molecular tools and approaches for genotyping and marker assisted breeding, intellectual property rights, bioinformatics tools and their uses in crop improvement.

I. **Course Title :** **Breeding for Quality and Special Traits**

II. **Course Code :** **GPB 507**

III. **Credit Hours :** **3(2+1)**

IV. **Why this course?**

Quality consciousness is growing in the society and only quality products are in

demand in the market so has to be the new varieties. This course acquaints breeding for grain quality parameters in field crops. It will also teach about the genetic engineering protocols for quality improvement: Biofortification in crops and Nutritional genomics and Second generation transgenics.

V. **Aim of the course**

To provide insight into recent advances in improvement of quality traits in cereals, millets, legumes, oilseeds, forage and industrial crops using conventional and modern biotechnological approaches.

VI. **Theory**

Unit I

Developmental biochemistry and genetics of carbohydrates, proteins, fats, vitamins, amino acids and anti-nutritional factors; Nutritional improvement - A human perspective.

Unit II

Breeding for grain quality parameters in rice and its analysis; Golden rice and aromatic rice: Breeding strategies, achievements and application in Indian context; Molecular basis of quality traits and their manipulation in

rice; Post harvest manipulation for quality improvement; Breeding for baking qualities in wheat, characters to be considered and breeding strategies, molecular and cytogenetic manipulation for quality improvement in wheat.

Unit III

Breeding for quality improvement in Sorghum, pearl millet, barley and oats; Quality protein maize, specialty corns, concept and breeding strategies; Breeding for quality improvement in important forage crops for stay green traits; Genetic resource management for sustaining nutritive quality in crops.

Unit IV

Breeding for quality improvement in pulses – Chickpea, pigeonpea, green gram and black gram cooking quality; Breeding for quality in oilseeds – groundnut, mustard, soybean, sesame, sunflower and minor oilseeds; Molecular basis of fat formation and manipulation to achieve more PUFA in oil crops; Genetic manipulation for quality improvement in cotton. Breeding for quality improvement in Sugarcane, potato.

Unit V

Genetic engineering protocols for quality improvement: Achievements made; Biofortification in crops; Classification and importance, Nutritional genomics and Second generation transgenics.

VII. Practical

- Grain quality evaluation in rice; Correlating ageing and quality improvement in rice;
- Quality analysis in millets;
- Estimation of anti-nutritional factors like tannins in different varieties/ hybrids: A comparison;
- Quality parameters evaluation in wheat, pulses and oilseeds;
- Evaluation of quality parameters in cotton, sugarcane and potato;
- Value addition in crop plants;
- Post-harvest processing of major field crops;
- Quality improvement in crops through tissue culture techniques;
- Evaluating the available populations like RIL, NIL, etc. for quality improvement using MAS procedures;
- Successful example of application of MAS for quality trait in rice, mustard, maize, etc.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

The knowledge of this course will expose the student to know about various conventional and genetic engineering techniques for the improvement of quality characters in agricultural and horticultural field crops.

I. **Course Title : Mutagenesis and Mutation Breeding**

II. **Course Code : GPB 508**

III. **Credit Hours : 3 (2+1)**

IV. Why this course?

The knowledge of this course will enable the students to learn about mutation, various methods of inducing mutations and their utilization in plant breeding. It will also give in depth knowledge about genomics, allele mining, TILLING, etc. and their utilization in crop improvement programmes.

V. Aim of the course

To impart the knowledge about general principles of mutagenesis for crop improvement and various tests/ methods for detection of mutations.

VI. Theory

Unit I

Mutation and its history, nature and classification of mutations: spontaneous and induced mutations, micro and macro mutations, pre and post adaptive mutations; Detection of mutations. Paramutations in crops plants.

Mutagenic agents: physical – radiation types and sources: Ionizing and non-ionizing radiations. Radiobiology: mechanism of action of various radiations (photoelectric absorption, Compton scattering and pair production) and their biological effects – RBE and LET relationships; Effect of mutations on DNA – repair mechanisms operating at DNA, chromosome, cell and organism level to counteract the mutation effects; Dosimetry -Objects and methods of treatment; Factors influencing mutation: dose rate, acute vs chronic irradiation, recurrent irradiation, enhancement of thermal neutron effects; Radiation sensitivity and modifying factors: External and internal sources – Oxygen, water content, temperature and nuclear volume.

Unit III

Chemical mutagens: Classification – base analogues, antibiotics, alkylating agents, acridine dyes and other mutagens: their properties and mode of action; Dose determination and factors influencing chemical mutagenesis; Treatment methods using physical and chemical mutagens, Combination treatments; other causes of mutation – direct and indirect action, comparative evaluation of physical and chemical mutagens.

Unit IV

Observing mutagen effects in M_1 generation: plant injury, lethality, sterility, chimeras, etc.; Observing mutagen effects in M_2 generation; Estimation of mutagenic efficiency and effectiveness – spectrum of chlorophyll and viable mutations; Mutations in traits with continuous variation; Factors influencing the mutant spectrum: genotype, type of mutagen and dose, pleiotropy and linkage, etc.; Individual plant based mutation analysis and working out effectiveness and efficiency in M_3 generation; Comparative evaluation of physical and chemical mutagens for creation of variability in the some species- Case studies.

Unit V

Use of mutagens in creating oligogenic and polygenic variations – Case studies; *In-vitro* mutagenesis – Callus and pollen irradiation; Handling of segregating M_2 generations and selection procedures; Validation of mutants; Mutation breeding for various traits (disease resistance, insect resistance, quality improvement, etc.) in different crops; Procedures for micromutations breeding/ polygenic mutations; Achievements of mutation breeding- varieties released across the

world, problems associated with mutation breeding. Use of mutagens in genomics, allele mining, TILLING.

VII. Practical

- Precautions on handling of mutagens; Dosimetry-Studies of different mutagenic agents:Physical mutagens and Chemical mutagens;
- Learning on Radioactivity- Production source and isotopes at BRIT, Trombay, Learning about gamma chamber;
- Radiation hazards: Monitoring – safety regulations and safe transportation of radioisotopes, visit to radio isotope laboratory; learning on safe disposal of radioisotopes;
- Hazards due to chemical mutagens – Treating the plant propagules at different doses of physical and chemical mutagens;
- Procedures in combined mutagenic treatments;
- Raising the crop for observation; Mutagenic effectiveness and efficiency, calculating the same from earlier literature;
- Study of M_1 generation – Parameters;
- Study of M_2 generation – Parameters;
- Mutation breeding in cereals and pulses-achievements made and an analysis;
- Mutation breeding in oilseeds and cotton- achievements and opportunities;
- Mutation breeding in forage crops and vegetatively propagated crops;
- Procedure for detection of mutations for polygenic traits in M_2 and M_3 generations.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

This course will make the student well versed with the process of mutation and its use in crop improvement. This course will also give in depth knowledge of mutations in genomics, allele mining and TILLING.

I. **Course Title : Hybrid Breeding**

II. **Course Code : GPB 509**

III. **Credit Hours : 3(2+1)**

IV. **Why this course?**

This course will expose the students with the basic concepts of hybrid varieties and various techniques for development of hybrids in crop plants. This will also give an overview of various kinds of male sterility and their utilization in hybrid seed production of important field crops.

V. **Aim of the course**

To provide knowledge of understanding about mechanisms of heterosis and its exploitation for yield improvement through conventional and biotechnological approaches.

VI. **Theory**

Unit I

Historical aspect of heterosis, nomenclature and definitions of heterosis; Heterosis

in natural population and inbred population; Evolutionary aspects – Genetic consequences of selfing, sibbing and crossing in self- and cross-pollinated and asexually propagated crops; Pre-Mendelian and Post-Mendelian ideas – Evolutionary concepts of heterosis; Genetic theories of heterosis – Physiological, Biochemical and molecular factors underlining heterosis; theories and their estimation; Biometrical basis of heterosis.

Unit II

Prediction of heterosis from various crosses, inbreeding depression, coefficient of inbreeding and its estimation, residual heterosis in F_2 and segregating populations, importance of inbreeding in exploitation of heterosis – case studies.; Relationship between genetic distance and expression of heterosis, case studies; Divergence and genetic distance analyses, morphological and molecular genetic distance in predicting heterosis; Development of heterotic pools in germplasm/ genetic stocks and inbreds, their improvement for increasing heterosis.

Unit III

Male sterility and use in heterosis breeding; Male sterile line creation and diversification in self-pollinated, cross pollinated and asexually propagated crops; Creation of male sterility through genetic engineering and its exploitation in heterosis; Maintenance, transfer and restoration of different types of male sterility; Use of self-incompatibility in development of hybrids.

Unit IV

Hybrid seed production system: 3-line, 2-line and 1-line system; Development of inbreds and parental lines- A, B and R lines – functional male sterility; Commercial exploitation of heterosis, maintenance breeding of parental lines in hybrids; Fixation of heterosis in self, cross and often cross pollinated crops, asexually/ clonally propagated crops, problems and prospects; Apomixis in fixing heterosis-concept of single line hybrid; Organellar heterosis and complementation.

Unit V

Hybrid breeding in wheat, rice, cotton, maize, pearl millet, sorghum and rapeseed- mustard, sunflower, safflower and castor oilseed crops and pigeonpea.

VII. Practical

- Characterization of male sterile lines using morphological descriptors;
- Restorer line identification and diversification of male sterile sources;
- Male sterile line creation in crop plants, problems in creation of CGMS system, ways of overcoming them;
- Diversification and restoration;
- Success stories of hybrid breeding in Maize, Rice, Pearl millet, Sorghum and Pigeonpea;
- Understanding the difficulties in breeding apomicts;
- Estimation of heterotic parameters in self, cross and asexually

propagated crops;

- Estimation from the various models for heterosis parameters;
- Hybrid seed production in field crops—an account on the released hybrids, their potential, problems and ways of overcoming it;
- Hybrid breeding at National and International level, opportunities ahead.

VIII. **Teaching methods**

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. **Learning outcome**

After completing this course, the student will be able to know about importance of heterosis, the various conventional and biotechnological approaches for the development of hybrids. This will also enable student to know about the use of male sterility in hybrid seed production of important field crops.

I. **Course Title : Seed Production and Certification**

II. **Course Code : GPB 510**

III. **Credit Hours : 2(1+1)**

IV. **Why this course?**

Seed is the essence of life. Its improvement, production and maintenance is an essential feature of any variety. Seed chain concept is highly relevant in commercial promotion of new varieties whereas process of certification is mandatory for quality assurance of seed.

V. **Aim of the course**

To impart knowledge on principles of seed production and certification. This will help the students to understand seed production practices and seed certification procedures in different crops.

VI. **Theory**

Unit I

Importance of seed as basic input in agriculture; Seed quality concept and importance; Generation system of seed multiplication -Varietal replacement rate, Seed multiplication ratios, Seed replacement rate, Seed renewal period and seed demand

and supply; Various factors influencing seed production –Physical and Genetic purity in seed production; Factors responsible for varietal and genetic deterioration.

Unit II

Nucleus seed production and its maintenance - Maintenance of parental lines of hybrids, Production of breeder, foundation and certified seed and their quality maintenance; Principles of seed production in self- and cross-pollinated crops; Hybrid seed production - system and techniques involved in Seed village concept; Organicseed production and certification.

Unit III

Principles of seed production in field crops; Floral structure, pollination mechanism and seed production techniques in self- and cross-pollinated cereals and millets.

Unit IV

Floral structure, pollination mechanism and methods and techniques of seed production in major pulses and oilseed crops; Varietal and hybrid seed production techniques in Pigeon pea, Mustard, Castor and Sunflower.

Unit V

Floral structure, pollination mechanism and methods and techniques of seed production in major commercial fibres. Hybrid-seed production techniques in major vegetatively propagated crops.

Unit VI

Seed certification - history, concept, objectives; Central seed certification board Seed certification agency/ organization and staff requirement; Legal status - Phases of seed certification, formulation, revision and publication of seed certification standards; Minimum Seed Certification Standards (MSCS) for different crops - General and specific crop standards, Field and seed standards; Planning and management of seed certification programs; Eligibility of a variety for certification, area assessment, cropping history of the seed field.

VII. Practical

- Planting design for variety- hybrid seed production techniques, planting ratio of male and female lines, synchronization of parental lines and methods to achieve synchrony;
- Identification of rogues and pollen shedders, supplementary pollination, detasseling, hand emasculation and pollination;
- Pollen collection and storage methods, pollen viability and stigma receptivity;
- Pre-harvest sanitation, maturity symptoms, harvesting techniques;
- Visits to seed production plots - visit to seed industries;
- Planning for seed production: cost benefit ratio, seed multiplication ratio and seed replacement rate;
- General procedure of seed certification, identification of weed and other crop seeds as per specific crops, field inspection at different stages of a crop and observations recorded on contaminants and reporting of results, inspection and sampling, harvesting/ threshing, processing and after processing for seed law enforcement;
- Specifications for tags and labels to be used for certification purpose.

VIII. Teaching methods

- Power point presentation

- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX.

X. Learning outcome

After completing this course the student will be able to know about seed production of different crop varieties and hybrids, their processing, marketing and seed laws.

I.	Course Title	: Crop Breeding I (Kharif Crops)
II.	Course Code	: GPB 511
III.	Credit Hours	: 3(2+1)

IV. **Why this course?**

Botanical features, reproductive systems, genetics involved and important breeding techniques are essential to undertake any crop improvement programme. This course is designed for important/ major *Kharif* field crops.

V. **Aim of the course**

To provide insight into recent advances in improvement of kharif cereals, legumes, oilseeds, fibre, sugarcane and vegetative propagated crops using conventional and modern biotechnological approaches.

VI. **Theory**

Unit I

Rice: Origin, evolution, mode of reproduction, chromosome number; Genetics –

biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding,

released varieties, examples of MAS used for improvement, Aerobic rice, its

implications and drought resistance breeding.

Maize: Origin, evolution, mode of reproduction, chromosome number; Genetics – cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement- QPM and Bt maize – strategies and implications.

Small millets: Evolution and distribution of species and forms - wild relatives and germplasm; Cytogenetics and genome relationship - breeding objectives yield, quality characters, biotic and abiotic stress resistance, etc.

Unit II

Pigeon pea: evolution, mode of reproduction, chromosome number; Genetics – cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement - Hybrid technology; maintenance of male sterile, fertile and restorer lines, progress made at National and International institutes.

Groundnut: Origin, evolution mode of reproduction, chromosome number; Genetics

– cytogenetics and genome relationship, breeding objectives: yield, quality

characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, released varieties, examples of MAS used for improvement.

Other pulses: Urdbean, mungbean, cowpea,: Origin, evolution, mode of reproduction, chromosome number; Genetics – cytogenetics and genome relationship, breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), released varieties, examples of MAS used for improvement. Interspecific crosses attempted and its implications, reasons for failure, ways of overcoming them.

Unit III

Soybean: Origin, evolution, mode of reproduction, chromosome number; Genetics

– cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement. **Castor and Sesame:** Origin, evolution mode of reproduction, chromosome number; Genetics –cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), released varieties, examples of MAS used for improvement; Hybrid breeding in castor – opportunities, constraints and achievements.

Unit IV

Cotton: Origin, evolution, mode of reproduction, chromosome number; Genetics –

cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement, Development and maintenance of male sterile lines – Hybrid development and seed production – Scenario of Bt cottons, evaluation procedures for Bt cotton.

Jute: Origin, evolution, mode of reproduction, chromosome number; Genetics – cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement.

Unit V

Sugarcane: Evolution and distribution of species and forms, wild relatives and germplasm; Cytogenetics and genome relationship – Breeding objectives- yield, quality characters, biotic and abiotic stress resistance, etc.

Forage crops: Evolution and distribution of species and forms – Wild relatives and germplasm; Cytogenetics and genome relationship; Breeding objectives- yield, quality characters and palatability studies; Biotic and abiotic stress resistance, etc. **Seed spices:** Origin, evolution, mode of reproduction, chromosome number; Genetics

– cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc.; Breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, Achievements of important spice crops.

VII. Practical

Floral biology, emasculation, pollination techniques in rice, maize, pigeon pea, soybean, sesame, cotton;

- Study of range of variation for yield and yield components;
- Study of segregating populations in cereal, pulses and oilseed crops;
- Learning on the crosses between different species; attempting crosses between black gram and green gram;
- Evaluating the germplasm of cotton for yield, quality and resistance parameters, learning the procedures on development of Bt cotton;
- Visit to Cotton Technology Laboratory and Spinning Mills;
- Learning on the Standard Evaluation System (SES) and descriptors; Use of software for database management and retrieval;
- Practical learning on the cultivation of fodder crop species on sewage water, analysing them for yield components and palatability;
- Laboratory analysis of forage crops for crude protein, digestibility percent and other quality attributes;
- Visit to animal feed producing factories;
- Learning the practice of value addition; Visiting the animal husbandry unit and learning the animal experiments related with palatability and digestibility of fodder.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After completing this course, the student will be able to know about important botanical status and reproductive structures of crops and genetics of important kharif field crops.

I. **Course Title** : **Crop Breeding-II (Rabi Crops)**

II. **Course Code** : **GPB 512**

III. **Credit Hours** : **3(2+1)**

IV. **Why this course?**

Botanical features, reproductive systems, genetics involved and important breeding techniques are essential to undertake any crop improvement programme. This course is designed for important/ major Rabi field crops.

V. **Aim of the course**

To provide insight into recent advances in improvement of *Rabi* cereals, legumes, oilseeds, fibre and vegetative propagated crops using conventional and modern biotechnological approaches

VI. **Theory**

Unit I

Wheat: Origin, evolution, mode of reproduction, chromosome number; Genetics – cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement.

Oats: Origin, evolution, mode of reproduction, chromosome number; Genetics –

cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, released varieties, examples of MAS used for improvement.

Barley: Origin, evolution, center of origin, mode of reproduction, chromosome number; Genetics – cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, released varieties, examples of MAS used for improvement.

Unit II

Chickpea: Origin, evolution mode of reproduction, chromosome number; Genetics

– cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, released varieties, examples of MAS used for improvement.

Other pulses: Lentil, field pea, Rajma, Horse gram: Origin, evolution, mode of reproduction, chromosome number; Genetics. cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement. Interspecific crosses attempted and its implications, reasons for failure, ways of overcoming them.

Unit III

Rapeseed and Mustard: Origin, evolution, mode of reproduction, chromosome number; Genetics – cytogenetics and genome relationship; Breeding objectives; yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement, Oil quality, Improvement for oil quality.

Sunflower, Safflower: Origin, mode of reproduction, chromosome number; Genetics, cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, heterosis breeding, released varieties, examples of MAS used for improvement.

Unit IV

Mesta and minor fibre crops: Origin, mode of reproduction, chromosome number; Genetics–cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, released varieties, examples of MAS used for improvement.

Forage crops: Origin, evolution mode of reproduction, chromosome number; Genetics–cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance.

Unit V

Seed spices: Origin, evolution, mode of reproduction, chromosome number; Genetics– cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance, etc., breeding approaches, introgression of alien gene(s) (if required), biotic and abiotic stress resistance, scope of heterosis breeding, released varieties, examples of MAS used for crop improvement.

VII. Practical

- Floral biology, emasculation and pollination techniques in wheat, oats, barley, chickpea, rajma, rapeseed mustard, sunflower;
- Study of range of variation for yield and yield components;
- Study of segregating populations in cereal, pulses and oilseed crops;
- Use of descriptors for cataloguing; Learning on the crosses between different species;
- Trait based screening for stress resistance;
- Learning on the Standard Evaluation System (SES) and descriptors;
- Use of software for database management and retrieval.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After completion of this course the student will be able to know about the

different breeding methods and genetics of major *Rabi* field crops.

X. Suggested Reading

I. Course Title : Breeding Vegetable Crops

II. Course Code : GPB 513

III. Credit Hours : 3(2+1)

IV. Why this course?

This course enables the students to learn about breeding objectives, methodologies and genetics involved for the improvement of major vegetable crops.

V. Aim of the course

To educate about principles and practices adopted for breeding of vegetable crops.

VI. Theory

Unit I

Breeding for Leafy vegetables: Amaranth, chenopods and lettuce.

Unit II

Breeding for Cucurbits: Gourds, melons, pumpkins and squashes.

Unit III

Breeding for Solanaceae: Potato and tomato, eggplant, hot pepper, sweet pepper

Unit IV

Breeding for Cole crops: Cabbage, cauliflower, broccoli and knolkhol.

Breeding for Root vegetables: Carrot, beetroot, radish, sweet potato and tapioca.

Unit V

Breeding for other vegetable crops: Peas, beans, onion, garlic and okra.

VII. Practical

- Selection of desirable plants from breeding population, observations and analysis of various qualitative and quantitative traits in germplasm;
- Hybridization and handling segregating generations;
- Induction of flowering, palanological studies, selfing and crossing techniques in vegetable crops;
- Hybrid seed production of vegetable crops in bulk;
- Screening techniques for insect-pests, disease and environmental stress resistance in vegetable crops;
- Demonstration of sib-mating and mixed population;
- Molecular marker techniques to identify useful traits in the vegetable crops and special breeding techniques;
- Visit to breeding blocks, MAS for incorporating traits governed by major and polygenes.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After completion of this course the students will be able to know about the different breeding methods and genetics of major vegetable crops.

X. Suggested Reading

I. **Course Title** : **Breeding Fruit Crops**

II. **Course Code** : **GPB 514**

III. **Credit Hours** : **3(2+1)**

IV. **Why this course?**

This course is aimed to educate the students about the breeding strategies and avenues in Fruit crops.

V. **Aim of the course**

To educate students about principles and practices adopted for breeding of fruit crops.

VI. **Theory**

Unit I

Fruit crop breeding: History, importance of fruit breeding, centers of diversity, distribution, domestication and adaptation of commercially important fruits.

Unit II

Issues in fruit crop breeding – heterozygosity, polyploidy, polyembryony, parthenocarpy and seed lessness, incompatibility and sterility systems.

Unit III

Apomixis - merits and demerits, types, variability for economic traits, role of genetic engineering and biotechnology in improvement of fruit crops.

Unit IV

Crop improvement in Mango, Banana, Citrus, Grapes, Papaya, Sapota and Pomegranate, Pineapple and Guava, Apple and other Rosaceous crops and region specific fruit crops.

VII. **Practical**

- Germplasm documentation;
- Floral biology of mango, guava, citrus, grape, pomegranate, pollen viability in major fruit crops;

- Pollen germination to study time of anthesis and stigma receptivity;
- Hybridization technique in important fruit crops, hybrid seed collection and raising;
- Colchicine treatment for induction of polyploidy;
- Exposure to resistance breeding and screening techniques;
- Mutation breeding practices raising and evaluation of segregating populations;
- Use of mutagens to induce mutations and polyploidy;
- Visit to Biotechnology Lab and study of *in-vitro* breeding techniques.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After completion of this course the students will be able to do the breeding of fruit crops through various conventional and biotechnological methods besides mutation breeding.

I. **Course Title : Breeding Ornamental Crops**

II. **Course Code : GPB 515**

III. **Credit Hours : 3(2+1)**

IV. **Why this course?**

The course will impart knowledge to student about breeding of Ornamental Crop through conventional and biotechnological interventions.

V. **Aim of the course**

To educate about principles and practices adopted for breeding of ornamental crops.

VI. **Theory**

Unit I

History of improvement of ornamental plants; Centre of origin of ornamental crop; Objectives and techniques in ornamental plant breeding.

Unit II

Introduction, selection, hybridization, mutation and biotechnological techniques for improvement of ornamental and flower crops, viz., Rose, Jasmine, *Chrysanthemum*, Tuberose, *Gerbera*, *Gladiolus*, *Dahlia*, *Lilium*, *Gaillardia*, *Petunia*, *Bougainvillea*, Pansy, Marigold, *Geranium*, *Antirrhinum*, China aster, Orchids, *Carnation*, *Hibiscus*, etc.

Unit III

Development of promising cultivars of important ornamental and flower crops; Role of Heterosis and its exploitation, production of F₁ hybrids and utilization of male sterility.

Unit IV

Production of open pollinated seeds, harvesting, processing and storage of seeds; Seed certification.

VII. **Practical**

- Study of floral biology and pollination in important species and cultivars

of ornamental crops;

- Techniques of inducing polyploidy and mutation;
- Production of pure and hybrid seed;
- Methods of breeding suited to seed propagated plants;
- Polyploidy and mutations to evolve new varieties;
- Breeding methods for biotic and abiotic stresses;
- Visit to research institutes involved in ornamental crop breeding.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After completion of this course the students will be able to do the breeding of ornamental crops by conventional breeding and biotechnological methods and to know the genetics of major ornamental crops.

- | | | |
|------|---------------------|--|
| I. | Course Title | : Breeding for Stress Resistance and Climate Change |
| II. | Course Code | : GPB 516 |
| III. | Credit Hours | : 3(2+1) |

IV. Why this course?

Climate change is a big challenge to sustain higher crop productivity and nutritional quality. Concept of breeding for stress tolerance and development of hybrids/ varieties for climate change is of prime importance in plant breeding. Therefore this course is essential for budding plant breeders.

V. Aim of the course

To apprise about various abiotic and biotic stresses influencing crop yield, mechanisms and genetics of resistance and methods to breed stress tolerant varieties.

VI. Theory

Unit I

Concept and impact of climatic change; Importance of plant breeding with special reference to biotic and abiotic stress resistance; Classification of biotic stresses – major pests and diseases of economically important crops.

Unit II

Concepts of resistance to insect and pathogen resistance; Analysis and inheritance of resistance variation; Host defence responses to pathogen invasions- Biochemical and molecular mechanisms; Acquired and induced immunity and systemic acquired resistance (SAR); Host-pathogen interaction, gene-for-gene hypothesis, molecular evidence for its operation and exceptions; Concept of signal transduction and other host-defence mechanisms against viruses and bacteria.

Unit III

Types and genetic mechanisms of resistance to biotic stresses –Horizontal and vertical resistance in crop plants; Quantitative resistance/ adult plant resistance and slow rusting resistance; Classical and molecular breeding methods - Measuring plant resistance using plant fitness; Behavioural, physiological and insect gain studies; Phenotypic screening methods for major pests and diseases; Recording of observations; Correlating the observations using marker data – Gene pyramiding methods and their implications. Classification of abiotic stresses - Stress inducing factors, moisture stress/ drought and water logging and submergence; Acidity, salinity/ alkalinity/ sodicity; High/low temperature, wind, etc.; Stress due to soil factors and mineral toxicity; Physiological and Phenological responses; Emphasis of abiotic stresses in developing breeding methodologies.

Unit IV

Genetics of abiotic stress resistance; Genes and genomics in breeding cultivars suitable to low water regimes and water logging and submergence, high and low/ freezing temperatures; Utilizing MAS procedures for

identifying resistant types in important crops like rice, sorghum, wheat, cotton, etc.; Breeding for resistance to stresses caused by toxicity, deficiency and pollutants/ contaminants in soil, water and environment.

Unit V

Use of crop wild relatives as a source of resistance to biotic and abiotic factors in major field crops; Transgenics in management of biotic and abiotic stresses, use of toxins, protease inhibitors, lectins, chitinases and Bt for diseases and insect pest management.

VII. Practical

- Understanding the climatological parameters and predisposal of biotic and abiotic stress factors- ways of combating them for diseases caused by fungi and bacteria;
- Symptoms and data recording; use of MAS procedures;
- Phenotypic screening techniques for sucking pests and chewing pests – Traits to be observed at plant and insect level;
- Phenotypic screening techniques for nematodes and borers; Ways of combating them;
- Evaluating the available populations like RIL, NIL, etc. for pest resistance;
- Use of standard MAS procedures. Breeding strategies - Weeds – ecological, environmental impacts on the crops;
- Breeding for herbicide resistance;
- Screening crops for drought and flood resistance; factors to be considered and breeding strategies;
- Screening varieties of major crops for acidity and alkalinity- their effects and breeding strategies;
- Screening forage crops for resistance to sewage water and tannery effluents; Quality parameters evaluation.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After completion of this course the student will be able to well verse with the stress and its causes. This will enable the students for the development of RIL, NIL, etc. for pest resistance and Use of standard MAS procedures

I. **Course Title : Germplasm Characterization and Evaluation**

II. **Course Code : GPB 517**

III. **Credit Hours : 2(1+1)**

IV. **Why this course ?**

Students need to learn about morphological and quality agronomic traits of accessions as well as their reaction to biotic and abiotic stresses. This will increase the importance of the germplasm.

V. **Aim of the course**

Students will gain knowledge on germplasm characterisation, evaluation and documentation of information. Recording of morphological and agronomic traits, including quality, as well as those for resilience to biotic and abiotic stresses that will promote utilisation. Exposure to development of web based

tools for systematic description for efficient use of germplasm.

VI. Theory

Unit I

Understanding genetic diversity in crop plants; Crop descriptors, descriptor states; germplasm characterization/ evaluation procedures; evaluation of germplasm for specific traits; Measuring diversity using agro-morphological data, statistical procedures to measure population genetic variation, markers and their use in PGR, evaluation of biotic and abiotic stresses, Principles and methods for formulating core and mini core collections and their validation, Web based tools for management of data.

Unit II

Principles and practices of germplasm regeneration and maintenance, breeding systems and mode of reproduction; maintaining sufficiently large populations for effective conservation of farmer landraces, evaluation and maintenance of wild relatives of crop plants. Genetic enhancement, Use of CWRs genetic resources for crop improvement.

Unit III

High throughput phenotyping systems- imaging and image processing concepts for automated germplasm characterization (phenotyping) – evaluation for nutritional traits, resistance traits -Biochemical and molecular markers for characterization.

VII. Practical

- Field layout and experimental designs;
- Recording field data on germplasm evaluation in different agri-horticultural crops,
- post harvest handling;
- Evaluating quality traits, biochemical and phyto-chemical evaluation of crop germplasm, data processing;
- Documentation, analysis of diversity and cataloguing, data analysis, viability equations, sampling strategies, data documentation, cataloguing, biochemical analyses of samples.

VIII. Teaching methods

- Lectures
- Power point presentations
- assignments, quiz
- Group tasks, student's presentations

IX. Learning Outcome

To educate students about science of managing genetic resources including principles involved in maintaining genetic integrity during regeneration, germplasm characterization and evaluation.

- I. **Course Title** : Genetic enhancement for PGR Utilization
- II. **Course Code** : GPB 518
- III. **Credit Hours** : 2(1+1)
- IV. **Why this course ?**

Pre-breeding is a vital step in the link between plant genetic resources conservation and its use; Hence, this course is designed to inculcate

theoretical and practical know how to understand and use classical and advanced plant breeding methods for planning and execution of prebreeding programmes so that the PGR is put into effective use for food and agriculture.

V. Aim of the course

To teach theoretical and practical know how on CWRs reproductive behavior, acclimatization and adaptation for utilization in prebreeding programmes using advanced tools.

VI. Theory

Unit I

Concepts of gene pools; Introduction, potential of pre-breeding. Role of crop wild relatives, semi exotics, creating and managing variation, basic concepts to set up a successful pre-breeding programme.

Unit II

Understanding crop adaptation, handling and maintenance of CWRs, synchronization of flowering, overcoming impediments to flowering through photoperiodic adjustments, role of other barriers to flowering, role of amphidiploids, semi exotics and other unadapted germplasm, identifying desirable traits in natural populations, screening for biotic and abiotic stress resistance traits; screening of nutritionally important traits, genetic analysis to understand the inheritance of novel traits.

Unit III

Parental selection for prebreeding, search for superior genotypes, breeding methods for trait transfer; moving the genes - unadapted to adapted, wide hybridization, Incongruity and its management, modern tools for incongruity management, cytogenetical approaches for gene transfer such as alien addition and substitution, segregating populations and their management in wide crosses, purging the undesirable traits, testing and improving the adaptability of wide cross derivatives, cytological studies, fluorescence microscopy, embryo rescue methods, pollen physiology and storage, pollen storage methods to facilitate wide hybridization, pre- and post- zygotic barriers.

VII. Practical

- Characterization of CWRs by visiting the fields;
- Screening methods for special traits-biotic and abiotic resistance;
- Screening for nutritional traits;
- Crossability studies in CWRs of cereals, legumes, oilseeds, vegetables.
Assessment of pre and post-zygotic barriers in wide hybridization

crosses;

- Pollen storage studies;
- Special requirements for growing CWRs, inducing flowering by manipulating daylength, temperature, chemical spraying, etc.

VIII. Teaching methods

- Lectures
- Power point presentations
- assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

Students would be conversant with handling of unadapted germplasm, screening methods for special traits-biotic and abiotic resistance, nutritional traits, characterization of CWR, breeding, etc.

I. Course Title : BREEDING OF TROPICAL CROPS

II. Course Code : GPB 519

III. Credit Hours : 2 (2+0)

IV. Why this course?

This course is aimed to educate the students about the breeding strategies and avenues in tropical crops with special relevance to Kerala conditions

V. Aim of the course

To provide insight into recent advances in improvement of perennial crops, tuber crops, spices, medicinal and aromatic plants using conventional and modern biotechnological approaches.

Theory

UNIT I

Perennial Commercial crops- Coconut, Arecanut, Rubber, Cashew, Cocoa, Coffee, Tea- Evolution and distribution of species and forms, wild relatives and germplasm, Classification, Cytogenetics, Breeding objectives – yield, biotic and abiotic stress resistance and quality, conventional and modern breeding approaches, achievements

UNIT II

Tropical tuber crops – Tapioca, Sweet potato, yam, colocasia: Evolution and distribution of species and forms, wild relatives and germplasm, Classification, Cytogenetics, Breeding objectives – yield, biotic and abiotic stress resistance and quality, conventional and modern breeding approaches, achievements

UNIT III

Spices - cardamom, black pepper clove, nutmeg, cinnamon, ginger, turmeric etc.

- Evolution and distribution of species and forms, wild relatives and germplasm, Classification, Cytogenetics, Breeding objectives – yield, biotic and abiotic stress resistance and quality, conventional and modern breeding approaches, achievements

UNIT IV

Medicinal and aromatic plants - Lemongrass eucalyptus *Oscimum*, *Piper longum*, *Kaempferia*, *Sida* spp. and other important tree medicinal plants
Evolution and distribution of species and forms, wild relatives and germplasm, Classification, Cytogenetics, Breeding objectives – yield, biotic and abiotic stress resistance and quality, conventional and modern breeding approaches, achievements.

*Compulsory Major Courses

I. Course Title : Advances in Plant Breeding Systems*

II. Course Code : GPB 601

III. Credit Hours : 3(3+0)

IV. Why this course?

This course is an advancement of principles, various plant breeding methodologies and procedures in the development of a complex population; MAS for selection of qualitative and quantitative traits, Gene pyramiding, marker-based utilization of exotic Germplasm and introgression libraries.

V. Aim of the course

To impart theoretical knowledge about advances in plant breeding.

VI. Theory

Unit I

Advances in reproductive biology of crops; Genes governing the whorls formation and various models proposed; Pollen pistil interaction: biochemical and molecular basis, environmental factors governing anthesis and bottlenecks for gene transfer.

Unit II

Plant Breeding methodologies: Classic versus modern; Over view of Pre and Post Mendelian breeding methods in self and cross pollinated crops; Molecular and transgenic breeding approaches; doubled haploid breeding, shuttle breeding, forward and reverse breeding, speed breeding, participatory plant breeding, breeding for organic situations.

Unit III

Principles and procedures in the formation of a complex population; Genetic basis of population improvement in crop plants; Recurrent selection methods in self and cross pollinated crops and their modifications; Convergent selection, divergent selection; Recurrent selection, usefulness in hybrid breeding programs; Reciprocal recurrent selection; Selection in clonally propagated crops – Assumptions and realities.

Unit IV

Choice of molecular markers for plant breeding efficiency, fingerprinting and genetic diversity assessment, application of MAS for selection of qualitative and quantitative traits; Gene pyramiding, accelerated backcrossing, marker-based utilization of exotic germplasm, introgression libraries.

Unit V

Genetic resources: primary, secondary, tertiary and alien trans gene pool; Molecular and biochemical basis of self-incompatibility and male sterility,

nucleocytoplasmic interactions with special reference to male sterility – genetic, biochemical and molecular bases.

Unit VI

Genetic engineering technologies to create male sterility, prospects and problems, use of self-incompatibility and sterility in plant breeding – case studies; Fertility restoration in male sterile lines and restorer diversification programs; Conversion of agronomically ideal genotypes into male sterile: Concepts and breeding strategies; Case studies - Generating new cyto-nuclear interaction system for diversification of male sterile; Stability of male sterile lines – Environmental influence on sterility, Environmentally Induced Genic Male Sterility (EGMS) – Types of EGMS; Influence on their expression, genetic studies; Photo and thermo sensitive genetic male sterility and its use in heterosis breeding; Temperature sensitive genetic male sterility and its use heterosis breeding; Apomixis and its use in heterosis breeding; Incongruity: Factors influencing incongruity Methods to overcome incongruity mechanisms.

Unit VII

Breeding for climate change -Improving root systems, abiotic stress tolerance, water use efficiency, flooding and sub-mergence tolerance; Biotic stress tolerance; Nutrient use efficiency, nitrogen fixation and assimilation, greenhouse gases and carbon sequestration; Breeding for bio-fortification.

VII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

VIII. Learning outcome

After completion of this course the student will be able to know various plant breeding methodologies, principles and procedures for the formation of a complex population; MAS for selection of qualitative and quantitative traits, Gene pyramiding, marker based utilization of exotic Germplasm and Breeding for climate change

I. **Course Title** : **Advances in Biometrical Genetics**

II. **Course Code** : **GPB 602**

III. **Credit Hours** : **3(2+1)**

IV. **Why this course?**

This course is essential to understand various qualitative, quantitative systems/ techniques related to genetic improvement of crops, G x E Interaction, Construction of saturated linkage maps and Marker Assisted Selection (MAS).

V. **Aim of the course**

To impart theoretical knowledge and computation methods for non-allelic interactions, mating designs and component analysis and their significance in plant breeding.

VI. **Theory**
Unit I

Continuous variation-evolutionary studies; Genetic principles of continuous variation, Qualitative and quantitative techniques-differences, population types, approaches;

various types of metrics, F_2 , F_∞ and mixed; Selection of parents Simultaneous

selection models; Use of Multiple regression analysis in selection of genotypes.

Unit II

Components of mean- Additive effect, breeding value, coefficient of gene dispersion, dominance; Simple scaling test, expectation of mean of character in various types of families in coupling and dispersed phase; Epistasis-Specification, weighted and un-weighted joint scaling test; Effect of linkage to generation mean, specification of mean to $G \times E$ interaction.

Unit III

Component of variances-advantages, variances of different generations, balance sheet of variance; estimation of parameters-weighted and unweighted, least square analysis; random mating population; experimental population-BIPs, NCD-I, II, III, Triple test cross for random mating population and inbreds; Estimates of linkage and non-allelic interactions; Combining ability analysis, Hayman's Approach.

Unit IV

$G \times E$ Interaction, stability and adaptability; Advanced models in stability analysis - Pattern analysis - Additive Main Effect and Multiplicative Interaction (AMMI) analysis and other related models; Merits and limitation of different stability analysis methods; Analysis and selection of genotypes; Methods and steps to select the best model - Biplots and mapping genotypes.

Unit V

Construction of saturated linkage maps, concept of framework map development; QTLs-different types of markers and mapping populations, linkage maps, mapping-Strategies for QTL mapping - desired populations, statistical methods; MAGIC populations, Marker Assisted Selection (MAS) - Approaches to apply MAS in Plant breeding - selection based on markers - simultaneous selection based on marker and phenotype - Factors influencing MAS; Heritability of the trait, proportion of genetic variance, linkage disequilibrium between markers and traits and selection methods; Use of advanced software packages for biometrical analysis, interpretation

of analysed data.

VII. Practical

- Generation mean analysis: ABC scaling test and Joint scaling test- Analysis and interpretation;
- Estimation of variance of different filial generations and interpretations;
- Diallel analysis: Numerical, graphical and combining ability analysis; Triallel analysis;
- NC Designs: Triple test cross analysis;
- Stability analysis: Eberhart and Russel model;
- AMMI model - Principal Component Analysis model - Additive and multiplicative model - Shifted multiplicative model - Analysis and selection of genotypes - Methods and steps to select the best model - Selection systems - Biplots and mapping genotypes;
- Construction of linkage maps and QTL mapping - Strategies for QTL mapping; statistical methods in QTL mapping;
- Phenotype and Marker linkage studies;
- Use of advanced software in biometrical analysis.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome

After the completion of this course student will be able to understand various Qualitative and quantitative techniques, $G \times E$ Interaction, Construction of saturated linkage maps and Marker Assisted Selection, Use of advanced software packages for biometrical analysis, interpretation of analysed data.

I. Course Title : Molecular Cytogenetics for Crop Improvement

II. Course Code : GPB 603

III. Credit Hours : 2(2+0)

IV. Why this course?

This course is needed to understand organization and structure of genome, karyotyping, Pre-breeding and applications of cytogenetic methods for crop improvement

V. Aim of the course

This course focuses on applications of cytogenetic techniques for crop improvement.

VI. Theory

Unit I

Organization and structure of genome, Genome size, Organization of

organellar genomes, Nuclear DNA organization, Nuclear and Cytoplasmic genome interactions and signal transduction; Inheritance and expression of organellar DNA; Variation in DNA content - C value paradox; Sequence complexity – Introns and Exons, Repetitive sequences, Role of repetitive sequence.

Unit II

Karyotyping – Chromosome banding and chromosome painting; Flow cytometry, chromosome walking Tracking introgressions using FISH, GISH, localization and mapping of genes/ genomic segments.

Unit III

Pre-breeding and applications of cytogenetical methods for crop improvement; Location and mapping of genes on chromosomes: deficiency method; Interchange genetic consequence, identification of chromosomes involved and gene location; balanced lethal systems, their maintenance and utility; Multiple interchanges-use in producing inbreds, transfer of genes-linked marker methods; Duplication - production and use; Inversions and location of genes; B/ A chromosome translocations and gene location.

Unit IV

Trisomics- types, production, breeding behavior and location of genes, use of balanced tertiary trisomics in hybrid seed production; Monosomics methods of production, breeding behavior and location of genes; Intervarietal substitutions-allelic and non- allelic interactions; Telocentric method of mapping, Production, cytogenetics and application of chromosome addition lines, substitution lines, chromosomal segment substitution lines (CSSLs).

Unit V

Cytogenomics: Concept, tools and techniques for crop improvement; Chromosome sorting: Isolation of specific chromosome for development of molecular maps and gene location.

Unit VI

Role of polyploidy in crop evolution and breeding. Auto- and allopolyploids; Distant hybridization, barriers to interspecific and intergeneric hybridization; Behaviour of interspecific and intergeneric crosses.

VII. Teaching methods

- Power point presentation
- Chalk and Board

- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

VIII. Learning Outcome

After the completion of this course the student will be able to understand Organization and structure of genome, karyotyping, Pre-breeding, polyploidy and applications of cytogenetically methods for crop improvement.

I. Course Title : Plant Genetic Resources, Conservation and Utilization

II. Course Code : GPB 604

III. Credit Hours : 2(2+0)

IV. Why this course?

This course is needed to make the student aware about the importance of Plant Genetic Resources its Conservation and Utilization in crop improvement.

V. Aim of the course

To impart knowledge on the methods of germplasm conservation and its utilization

VI. Theory

Unit I

Concept of natural reserves and natural gene banks; *In situ* conservation of wild species in nature reserves: *in situ* conservation components, factors influencing conservation value, national plan for *in situ* conservation; *in situ* conservation of agro-biodiversity on-farm; scientific basis of *in situ* conservation on-farm, building on-farm conservation initiatives, implementation of on-farm conservation, management of *in situ* conserved genetic diversity on-farm, enhancing benefits for farmers from local crop diversity.

Unit II

Ex situ conservation: components, plant genetic resources conservation in gene banks, national gene banks, gene repositories, preservation of genetic materials under natural conditions, perma-frost conservation, guidelines for seed multiplication and exchange to network of active/ working collections, orthodox, recalcitrant seeds- differences in handling, clonal repositories, genetic stability under long term storage condition.

Unit III

In-vitro storage, maintenance of *in-vitro* culture under different conditions, *in-vitro* bank maintenance for temperate and tropical fruit crop species, spices, tubers, bulbous crops, medicinal and endangered plant species, conservation of embryos and ovules, cell/ suspension cultures, protoplast and callus cultures, pollen culture, micropropagation techniques, problems, prospects of *in-vitro* gene bank.

Unit IV

Cryopreservation- procedure for handling seeds of orthodox and recalcitrant- cryo- protectants, desiccation, rapid freezing, slow freezing, vitrification techniques, encapsulation/ dehydration techniques, national facilities, achievements, application of cryopreservation in agricultural, horticultural and forestry crops. Problems and prospects; challenges ahead.

Unit V

Concept and procedure for PGR management, germplasm characterization, evaluation and utilization; Concept of core and mini core; collections and registration of plant germplasm.

VII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

VIII. Learning outcome

After the completion of this course the student will be able to know about the various techniques of conservation of Plant Genetic Resources and its Utilization in crop improvement.

IX. Suggested Reading

- I. **Course Title** : **Genomics in Plant Breeding***
II. **Course Code** : **GPB 605**
III. **Credit Hours** : **3(3+0)**
IV. **Why this course?**

The knowledge of recent trends in plant genomics, genome sequencing, molecular maps, and concepts of high-throughput proteomics, metabolomics and phenomics is essential in rapid crop improvement programmes.

V. Aim of the course

To impart practical skills in advanced molecular techniques in genome mapping structural/ functional genomics.

VI. Theory

Unit I

Introduction to the plant genomes: nuclear, chloroplast and mitochondrial genomes; Concept of genome size and complexity: C-value paradox, repetitive and unique DNA.

Unit II

Genome sequencing: Principles and techniques of conventional approaches and next generation sequencing including sequencing-by-synthesis/ ligation and single molecule real time (SMRT) technologies; Applications of sequence information: structural, functional and comparative genomics; Plant genome projects: Strategies for genome sequencing including shot gun and clone-by-clone method.

Unit III

Molecular maps: Use of molecular markers/ SNPs for development of genetic and physical maps; Linkage and LD-based gene mapping approaches including gene/ QTL mapping, genome wide association studies (GWAS) and association analysis; Integration of genetic and physical map for map-based cloning of economically important genes. Concept of allele mining; Diversity array technology: concepts and applications.

Unit IV

Functional genomics: concept of reverse and forward genetics; Use of activation tagging, transposon tagging, insertional mutagenesis, TILLING and ecoTILLING for crop improvement; Genome-wide and gene-specific transcriptomics approaches: serial analysis of gene expression, massively parallel signature sequencing, next generation sequencing, microarray, northern hybridization, RT-PCR, qRT-PCR and molecular beacon.

Unit V

Development and management of database; Applications of bioinformatics tools/ software in genomics for crop improvement. Basic concepts of high-throughput proteomics, metabolomics and phenomics.

Unit VI

Recent transgene free genome editing tools such as CRISPR-Cas9 system, TALENs and ZFNs for crop improvement. Cisgenesis and Intragenesis tools as twin sisters for Crop Improvement; Genomics-based plant breeding: Genome-Wide Genetic Diversity Studies, Identification of molecular

markers linked to single Genes and QTL, Marker Assisted Selection (Marker Assisted Backcross Selection, Association mapping, Breeding by Design, Genome selection).

VII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

VIII. Learning outcome

After the completion of this course, the student will have expertise on about different techniques for genome sequencing, molecular maps, and concepts of high-throughput proteomics, metabolomics and phenomics in crop improvement

<http://ncbi.nlm.nih.gov> <http://www.maizegenetics.net>

- I. **Course Title** : **Population Genetics**
II. **Course Code** : **GPB 606**
III. **Credit Hours** : **2(2+0)**

IV. **Why this course?**

Population improvement programmes are the basis of genetic enhancement in cross pollinated crops. This course is needed to make the students aware about the population genetics and its role in crop improvement.

V. **Aim of the course**

To impart knowledge on structure, properties and their breeding values of different population.

VI. **Theory**

Unit I

Population: Properties of population, Mendelian population; Genetic constitution of a population through time, space, age structure, etc.; Frequencies of genes and genotypes; Causes of change: population size, differences in fertility and viability, migration and mutation.

Unit II

Hardy-Weinberg equilibrium, Hardy-Weinberg law, Proof and applications of the Hardy-Weinberg law, Test of Hardy-Weinberg equilibrium; Mating frequencies:

Non-dominance, Codominance, Snyder's ratio, importance and its effect over random mating in succeeding generations.

Unit III

Multiple alleles, More than one locus, Sex linked genes; Use of gene and genotypic frequencies evaluation in field population level; Interpretations - Changes of gene frequency, Migration, Mutation, Recurrent and non-recurrent Selection; Balance between selection and mutation; Selection favoring heterozygotes; Overdominance for fitness.

Unit IV

Mating systems, Random mating population, Nonrandom mating: selfing – inbreeding coefficient, panmictic index, sibmating, Assortative mating and disassortative mating; Pedigree populations and close inbreeding, Estimation of linkage disequilibrium, Correlation between relatives and estimation of F; Effect of inbreeding and sibbing in cross pollinated crops; Gene substitution and average effects; Breeding value- Genetic drift; Genetic slippage, Co-adapted gene complexes; Homoeostasis- Adaptive organization of gene pools; Polymorphism- Balanced and Non-balanced

polymorphism, heterozygous advantage- Survival of recessive and deleterious alleles in populations.

VII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

VIII. Learning outcome

After the completion of this course the student will be well versed with population genetics, its components and applications in crop improvement.

IX. Suggested Reading

I. Course Title : Crop Evolution

II. Course Code : GPB 607

III. Credit Hours : 3(3+0)

IV. Why this course?

This course imparts knowledge about the origin and evolution of species, centres of diversity, speciation, domestication and significance of polyploidy.

V. Aim of the course

To impart knowledge on crop evolutionary aspects and role of mutations, hybridizations and polyploidy in crop evolution and improvement.

VI. Theory

Unit I

Origin and evolution of species; Centres of diversity/ origin, diffused centres; Time and place of domestication; Patterns of evolution and domestication-examples and Case studies; Domestication and uniformity – Characteristics of early domestication and changes – Concept of gene pools and crop evolution; Selection and Genetic drift – Consequences.

Unit II

Speciation and domestication–The process of speciation, Reproductive isolation barriers; Genetic differentiation during speciation; Hybridization - speciation and extinction; Exploitation of natural variation: Early attempts to increase variation, Distant hybridization and introgression, Inter-specific, inter-generic hybridization, scope and limitations, techniques to overcome the limitations; Gene transfer into cultivated species, tools and techniques; Validation of transferred genes and their expression; Controlled introgressions.

Unit III

Processes in crop evolution and stabilization of polyploids, cytogenetic and genetic stabilization; Genome organization – Transgenesis in crop evolution, Multifactorial genome, Intragenomic interaction, Intergenomic interaction, Genome introgression; Methods to study crop evolution - Contemporary Methods, Based on morphological features, Cytogenetic analysis, Allozyme variations and crop evolution, DNA markers, genome analysis and comparative genomics.

Unit IV

Evolutionary significance of polyploidy, evolution of crop plants through ploidy manipulations; Polyploids: methods, use of autopolyploids; haploidy and DH-method of production and use, allopolyploids; synthesis of new crops; Case studies – Cereals, Pulses, Oilseeds, vegetables, Fibre crops, Plantation crops, Forage crops, Tuber crops, Medicinal Plants.

VII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

VIII. Learning outcome

After the completion of this course the student will have knowledge of Origin and evolution of species, Centres of diversity, Speciation, domestication and significance of micro-mutations and polyploidy in genetic improvement of crop

plants.

IX. Suggested Reading

- Hancock JF. 2004. *Plant Evolution and the Origin of Crop Species*. 2nd Ed. CABI. Ladizinsky G. 1999. *Evolution and Domestication*. Springer.
- Miller AJ. 2007. *Crop Plants: Evolution*. John Wiley & Sons.
- Smartt J and Simmonds NW. 1995. *Evolution of Crop Plants*. Blackwell.

I. Course Title : Breeding Designer Crops

II. Course Code : GPB 608

III. Credit Hours : 2(1+1)

IV. Why this course?

This course enlightens about developing varieties for special traits, physiological efficiency and nutritional enhancement. It gives concept of biopharming and development of varieties producing targeted compounds, nutraceuticals and industrial products.

V. Aim of the course

Breeding crops for higher physiological efficiency and nutritional enhancement.

VI. Theory

Unit I

Breeding of crop ideotypes; Genetic manipulations through recombination breeding, genomics and transgenics for physiological efficiency, nutritional enhancement, special compounds-proteins, vaccines, gums, starch and fats.

Unit II

Physiological efficiency as a concept, parametric and whole plant physiology in integrated mode; Physiological mechanism of improvement in nutrient use efficiency, water use efficiency, osmotic adjustment, photosynthetic efficiency, stay green trait and its significance in crop improvement; Breeding for special traits, viz., oil, protein, vitamins, amino acids, etc.; Ecospecific ideotypes, Ideotypes for high and low moisture conditions, low and high input conditions, conversion mechanism of C₃ to C₄ plants; Determination of genetics of above mentioned traits.

Unit III

Improvement in yield potential under sub-optimal conditions by manipulating source and sink, canopy architecture, plant-water relationships, effect of suboptimal conditions on cardinal plant growth and development processes, enhancing input use efficiency through genetic manipulations.

Unit IV

Concept of biopharming and development of varieties producing targeted compounds, nutraceuticals and industrial products; Success stories in vaccines, modified sugars, gums and starch through biopharming.

Unit V

Biosafety management, segregation and isolation requirements in designer crop production and post-harvest management.

VII. Practical

- Demonstration of plant responses to stresses through recent techniques;
- Water use efficiency, transpiration efficiency, screening techniques under stress conditions such as electrolyte leakage, TTC, chlorophyll fluorescence, canopy temperature depression, stomatal conductance, chlorophyll estimation, heat/ drought/ salt shock proteins.

VIII. Teaching methods

- Power point presentation
- Chalk and Board
- Smart board
- Lectures
- Assignments, quiz
- Group tasks, student's presentations

IX. Learning outcome:

Pass outs will have clear understanding of ideotypes of crops under varied agro- climatic situations and breed for physiological efficient genotype. Can develop varieties for special traits having high therapeutic and nutraceutical value.

X. Suggested Reading

- Balint A. 1984. *Physiological Genetics of Agricultural Crops*. AK Ademiaikiado. Hay RK. 2006. *Physiology of Crop Yield*. 2nd Ed. Blackwell.

I. Course Title : IPR and Regulatory Mechanism (e-course)*

II. Course Code : GPB 609

III. Credit Hours : 1(1+0)

IV. Why this course?

Biodiversity conservation and its judicious utilization are important in sustainable plant breeding programs. Breeders' and farmers' rights are important in scenario of globalization of agriculture so knowledge of IPRs is essential for a plant breeder to protect his varieties.

V. Aim of the course

The main objective of this course is to equip students and stakeholders with knowledge of intellectual property rights (IPR), related protection systems, their significance and use of IPR as a tool for wealth and value creation in a knowledge- based economy.

VI. Theory

Historical perspectives and need for the introduction of Intellectual Property Right regime; TRIPs and various provisions in TRIPS Agreement; Intellectual Property and Intellectual Property Rights (IPR), benefits of securing IPRs; Indian Legislations for the protection of various types of Intellectual Properties; Fundamentals of patents, copyrights, geographical indications, designs and layout, trade secrets and traditional knowledge, trademarks, protection of plant varieties and farmers' rights and biodiversity protection; Protectable subject matters, protection in biotechnology, protection of other biological materials, ownership and period of protection; National Biodiversity protection initiatives; Convention on Biological Diversity; International Treaty on Plant Genetic Resources for Food and Agriculture; Licensing of technologies, Material transfer agreements, Research collaboration Agreement, License Agreement

VII. Teaching methods

- Power point presentation
- Smart board
- Assignments, quiz
- Group tasks, student's presentations

VIII. Learning outcome

The students will have acquaintance of intellectual property rights, national and international laws on biodiversity and sustainable use of plant genetic resources through transfer and sharing. Can assist in follow up of various treatises and laws for research collaborations at international levels.

SEED SCIENCE AND TECHNOLOGY

Course Title with Credit Load for M.Sc. in Seed Science and Technology

Course No.	Course Title	Credit hours
SST 501*	Seed Developmental Biology	2 (1+1)
SST 502	Seed Dormancy and Germination	2 (1+1)
SST 503*	Seed Production Principles and Techniques in Field Crops	3 (2+1)
SST 504*	Seed Production Principles and Techniques in Vegetable Crops	3 (2+1)
SST 505	Seed Production Techniques in Fruits, Flowers, Spices, Plantation and Medicinal Crops	3 (2+1)
SST 506	Seed Production Techniques in Forage, Pasture and Green Manure Crops	2 (1+1)
SST 507*	Seed Legislation and Certification	3 (2+1)
SST 508*	Post Harvest Handling and Storage of Seeds	3 (2+1)
SST 509*	Seed Quality Testing and Enhancement	2 (1+1)
SST 510	Seed Technology of Tree Species	2 (1+1)
SST 511	Seed Industry and Marketing Management	2 (1+1)
SST 512	Seed Health Testing and Management	2 (1+1)
SST 591	Seminar	01
SST 599	Research	30
	Total Credits	70

* Compulsory Courses

WHY THIS COURSE:

Seed is the most complex and successful unit of reproduction in flowering plants. Seed contains genetic wisdom of the past and act as an agent of genetic transfer from generation to generation. Basic knowledge on seed developmental biology will enable the learners to understand the structure of seed to take up research in seed science and technology.

OBJECTIVE

To acquire knowledge on the development and maturation of essential structures of seed and their influence on seed quality.

THEORY

Unit I:

Floral biology - types of pollination and pollination mechanisms - self-incompatibility and male sterility; sporogenesis - micro and mega sporogenesis; gametogenesis - development of male and female gametes and their structures; embryo plane formation, development of cotyledons and hard seed; pollination and fertilization - mode of pollination, double fertilization, factors affecting pollination and fertilization.

Unit II:

Embryogenesis - development of monocot and dicot embryos - development of endosperm and seed coat - types of endosperm; embryo plane formation, development of cotyledons - apomixis - identification, classification, significance and its utilization; parthenocarpy; poly-embryony - types and significance; haplontic and diplontic sterility system, causes of embryo abortion, embryo rescue technique; somatic embryogenesis.

Unit III:

Seed development - source of assimilates - mechanism of translocation; chemical composition - synthesis and deposition of storage reserves - starch, protein, fat and secondary metabolites - hormonal regulation - acquisition of seed dormancy and germination.

Unit IV:

Maturation drying - orthodox and recalcitrant seeds - desiccation tolerance mechanism - structural changes during desiccation - role of LEA proteins.

Unit V:

Seed maturity indices - physiological and harvestable maturity; biotic and abiotic factors influencing seed development - development of hard seeds.

PRACTICALS

Study on floral biology of monocots, dicots; pollen morphology - different crops, pollen germination, viability test in major crops; seed embryo and endosperm development in monocots, seed embryo and endosperm and cotyledon development in dicots; seed coat development - anatomy and morphology; development of hard seeds; external and internal seed structures; seed development and maturation - physical, physiological changes and biochemical changes in agricultural and horticultural crops; acquisition of seed dormancy and germination at different stages of maturity; physiological and harvestable maturity - indices in different crops ; Preparation of seed album - identification of seeds.

LECTURE SCHEDULE

- 1 Study of floral biology, types of pollination and mechanisms
- 2 Sporogenesis: microsporogenesis and megasporogenesis
- 3 Gametogenesis: development of male and female gametes and their structures
- 4 Pollination and fertilization: mode of pollination, double fertilization, factors affecting pollination and fertilization
- 5 Study of self-incompatibility and male sterility, Embryogenesis: development of monocot and dicot embryos
- 6 Development of endosperm and seed coat, types of endosperm embryo plane formation, development of cotyledons.
- 7 Apomixis : identification, classification, significance and its utilization
- 8 Mid semester examination
- 9 Polyembryony: types and significance; haplontic and diplontic sterility system
- 10 Causes of embryo abortion, embryo rescue technique; somatic embryogenesis.
- 11 Seed development: source of assimilates, mechanism of translocation; chemical composition
- 12 Synthesis and deposition of storage reserves - synthesis and deposition of starch and protein
- 13 Synthesis and deposition of fat and secondary metabolites ,hormonal regulation
- 14 Maturation drying: orthodox and recalcitrant seeds
- 15 Desiccation tolerance: mechanism, structural changes during desiccation and role of LEA protein
- 16 Seed maturity indices: physiological and harvestable maturity
- 17 Biotic and abiotic factors influencing seed development, development of hard seeds

PRACTICAL SCHEDULE

- 1 Study on floral biology of monocot plants
- 2 Study on floral biology of dicot plants

- 3 Study on pollen morphology of different crops
- 4 Pollen germination and viability test in major crops
- 5 Seed embryo and endosperm development in monocots
- 6 Seed embryo and cotyledon development in dicots
- 7 Anatomy and morphology of seed coat during development
- 8 Study on development of hard seeds
- 9 Study on external and internal seed structures
- 10 Seed development and maturation in agricultural crops - physical and physiological changes
- 11 Seed development and maturation in horticultural crops - physical and physiological changes
- 12 Study of biochemical changes during seed development and maturation in agricultural crops
- 13 Study of biochemical changes during seed development and maturation in horticultural crops
- 14 Study on acquisition of seed dormancy and germination at different stages of maturity
- 15 Study on physiological and harvestable maturity and maturity indices in different crops
- 16 Preparation of seed album and identification of seeds
- 17 Final Practical Examination

OUTCOME EXPECTED

- Successful completion of this course enable student to take up advanced research on seed developmental biology and understanding on fundamental aspects of gametogenesis, seed development and maturity.

WHY THIS COURSE:

Physiology and bio chemistry of dormancy and germination is basic science in the field of Seed Science and Technology. Complete understanding on the mechanisms of acquisition and release of dormancy and germination enable the students to take up research on advanced aspect which may helpful to design the seed for our requirement.

OBJECTIVE

To impart knowledge on significance, mechanism of dormancy, induction and release of seed dormancy and germination, types and factors influencing germination and their management.

THEORY

Unit I :

Seed dormancy - definition, concept and theories - significance - evolution; classification and mechanism of dormancy - ecological significance.

Unit II :

Induction of dormancy during development - hormonal, physiological, molecular and genetic control of dormancy - maternal and paternal contribution; environmental factors influencing dormancy induction and release - seasonal influence - winter and summer annuals - secondary dormancy induction mechanism; artificial induction of dormancy and release; soil seed bank - natural release of dormancy and its mechanism; dormancy breaking - principles and methods.

Unit III :

Seed germination - types and phases of germination; imbibition - pattern and water kinetics - events of germination - physical, physiological, biochemical changes; respiration - aerobic and anaerobic respiration during seed germination.

Unit IV :

Enzyme activation - mechanism - factors affecting enzyme activation - breakdown of stored materials - starch, protein and fat - energy generation - mobilization of storage reserves - changes in phenolic compounds.

Unit V :

Molecular and genetic control of seed germination- autotrophism; pattern of seed germination-tri phasic curve; factors affecting germination - media - temperature - light - gases; in-situ and viviparous germination - causes and mechanism.

PRACTICALS

Identification of types of seed dormancy - estimation of ABA and GA in dormant and non-dormant seeds - artificial induction of dormancy - dormancy breaking methods -

scarification, stratification, hormonal and chemical treatment after-ripening and leaching of inhibitors, combined treatments, assessing the duration for natural release of seed dormancy; seed germination - pattern of imbibition and seed germination - influence of light and temperature on germination and seedling development - hydrolytic enzyme analysis - changes in food reserves during seed germination.

LECTURE SCHEDULE

- 1 Definition, concept, theories and evolution of seed dormancy
- 2 Classification, mechanism and ecological significance of dormancy
- 3 Hormonal, physiological and molecular mechanism in induction of dormancy during development
- 4 Maternal and paternal contribution and genetic control of dormancy
- 5 Environmental factors influencing dormancy induction and release, seasonal influence on secondary dormancy induction mechanism
- 6 Artificial induction and release of dormancy, natural release of dormancy in soil seed bank and its mechanism
- 7 Dormancy breaking methods
- 8 Mid Semester Examination
- 9 Types, phases, imbibition pattern and water kinetics of seed germination
- 10 Physical, physiological and biochemical changes during seed germination
- 11 Aerobic and anaerobic respiration, enzyme activation, mechanism, factors affecting enzyme activation during seed germination
- 12 Breakdown of starch, protein and fat; ATP synthesis during seed germination
- 13 Mobilization of storage reserves during seed germination
- 14 Changes in phenolic compounds during seed germination
- 15 Molecular and genetic control of seed germination and autotrophism
- 16 Influence of media, temperature, light and gases on seed germination pattern of seed germination-tri phasic curve
- 17 Causes and mechanism of in-situ and viviparous germination

PRACTICAL SCHEDULE

- 1 Studies on seed dormancy and identification of types of dormancy
- 2 Estimation of ABA and GA in dormant and non-dormant seeds
- 3 Artificial induction of dormancy and release
- 4 Practicing scarification and stratification seed treatments

- 5 Practicing hormonal dormancy breaking treatments
- 6 Practicing chemical dormancy breaking treatments
- 7 Practicing combined dormancy breaking treatments
- 8 Assessing the duration of natural release of seed dormancy in soil seed bank
- 9 Studying the pattern of imbibition during seed germination
- 10 Studying the pattern of seed germination in different crops
- 11 Study on influence of light and temperature on germination and seedling development
- 12 Estimation of α -amylase during seed germination
- 13 Estimation of protease during seed germination
- 14 Estimation of lipase during seed germination
- 15 Estimation of dehydrogenase enzyme activity
- 16 Estimation of changes in food reserves during seed germination
- 17 Final Practical Examination

OUTCOME EXPECTED

- By learning this course, students will understand the fundamental theories and mechanism underlying in seed dormancy and germination which will be useful for both basic research and development.

SST 503* Seed Production Principles and Techniques in Field Crops 3 (2+1)

WHY THIS COURSE:

Awareness about the use of quality seed among farmers to enhance the seed demand and seed trade. To meet the seed demand, production should be carried out in large areas. Hence, it is essential to learn about the production principles and techniques of quality seed production.

OBJECTIVE

To impart knowledge on principles and practices involved in quality seed production of field crops.

THEORY

Unit I :

Importance of seed - seed quality - concept - factors influencing seed production; classes of seed - generation system of seed multiplication - stages of seed multiplication in varieties and hybrids - seed multiplication ratio (SMR) - seed replacement rate (SRR) - seed renewal period (SRP) - varietal replacement rate (VRR).

Unit II :

Genetic and agronomic principles of variety and hybrid seed production; nucleus and breeder seed production techniques and their maintenance; methods and techniques of seed production in varieties and hybrids of important cereals and millets - wheat, oat, rice, maize, sorghum and pearl millet; varietal seed production in small millets - finger millet, fox tail millet, little millet, kodo millet, proso millet and barnyard millet. Physical purity and genetic purity analysis in Field crops and Mid storage correction in field crops

Unit III :

Methods and techniques of varietal seed production in major pulses - black gram, green gram, cowpea, chickpea, horse gram, soybean and lentil - varietal and hybrid seed production in red gram.

Unit IV :

Methods and techniques of seed production in major oil seed crops - groundnut, sesame - varietal and hybrid seed production in sunflower, castor and mustard; varietal seed production in minor oilseed crops (safflower, linseed, niger) - varietal and hybrid seed production in cotton - varietal seed production in jute; seed and planting material production techniques in sugarcane.

Unit V :

Seed production planning for selection of varieties and hybrids of major crops; farmer's participatory seed production - seed hubs, seed village concept and community seed bank.

PRACTICALS

Criteria for seed selection on field establishment - sowing and nursery management techniques -Physical purity and genetic purity analysis in Field crops and Mid storage correction in field crops - seedling age on crop establishment , rice and pearl millet- isolation distance - space and barrier isolation : modifying isolation based on border rows in maize - planting design for hybrid seed production, rice maize , pearl millet , cotton , redgram ,sunflower- detasseling, emasculation and dusting - methods of achieving synchronization rice, bajra, sunflower- practising supplementary pollination, rice and sunflower - identification of off-types - roguing operation - estimation of seed shattering loss; in-situ germination and loss; visit to seed production fields; visit to seed industry and seed production field.

LECTURE SCHEDULE

- 1 Seed and its importance in agriculture and concept of seed quality
- 2 Biotic and abiotic factors influencing seed production
- 3 Different classes of seed and generation system of seed multiplication
- 4 Stages of seed multiplication and maintenance of parental lines in hybrids
- 5 Seed Multiplication Ratio (SMR) and Seed Replacement Rate (SRR) and their significance
- 6 Seed Renewal Period (SRP) and Varietal Replacement Rate (VRR) and their significance
- 7 Genetic and agronomic principles of variety and hybrid seed production
- 8 Nucleus seed production techniques and its maintenance
- 9 Breeder seed production techniques and its maintenance
- 10 Principles and techniques of seed production in varieties and hybrids of wheat and oat
- 11 Principles and techniques of seed production in rice varieties
- 12 Principles and techniques of seed production in rice hybrids
- 13 Principles and techniques of seed production in maize varieties and hybrids
- 14 Principles and techniques of seed production in varieties and hybrids of sorghum and pearl millet
- 15 Principles and techniques of varietal seed production in small millets - finger millet, fox tail millet and little millet
- 16 Physical purity and genetic purity analysis in Field crops and Mid storage correction in field crops
- 17 Mid - Semester Examination

- 18 Principles and techniques of varietal seed production in small millets - kodo millet, proso millet and barnyard millet
- 19 Principles and techniques of seed production in black gram, green gram and cowpea varieties
- 20 Principles and techniques of varietal seed production in chickpea and horse gram
- 21 Principles and techniques of varietal seed production in soybean and lentil
- 22 Principles and techniques of varietal and hybrid seed production in red gram
- 23 Principles and techniques of varietal seed production in groundnut
- 24 Principles and techniques of varietal seed production in sesame
- 25 Principles and techniques of varietal and hybrid seed production in sunflower
- 26 Principles and techniques of varietal and hybrid seed production in castor
- 27 Principles and techniques of varietal and hybrid seed production in mustard
- 28 Principles and techniques of varietal seed production in minor oilseed crops - safflower, linseed and niger
- 29 Principles and techniques of varietal and hybrid seed production in cotton
- 30 Principles and techniques of varietal seed production in jute
- 31 Seed and planting material production techniques in sugarcane
- 32 Seed production planning for selection of varieties and hybrids of major crops
- 33 Farmers participatory seed production through seed hubs and seed village concept
- 34 Role of community seed bank in India

PRACTICAL SCHEDULE

- 1 Selection criteria for quality seed and its effect on field establishment
- 2 Practicing sowing and nursery management techniques
- 3 Study on the effect of seedling age on crop establishment in rice and pearl millet
- 4 Study on space and barrier isolation for seed production
- 5 Planting design for hybrid seed production in rice, maize and pearl millet
- 6 Planting design for hybrid seed production in cotton, red gram and sunflower
- 7 Practicing detasseling technique for hybrid seed production in maize
- 8 Practicing emasculation and dusting for hybrid seed production in cotton
- 9 Study on methods of achieving synchronization in rice, bajra and sunflower
- 10 Practicing supplementary pollination in rice and sunflower
- 11 Identification of off types - pollen shedders, shedding tassels, partials, selfed bolls and practicing roguing operation
- 12 Estimation of seed shattering loss and study on in-situ germination
- 13 Visit to seed production fields and Visit to seed industry

- 14 Physical purity and genetic purity analysis in Field crops and Mid storage correction in field crops
- 15 Seed production planning for varieties and hybrids
- 16 Economics of varietal and hybrid seed production
- 17 Final practical examination

OUTCOME EXPECTED

- Successful completion of this course enable student to take up seed production venture in scientific manner to ensure seed quality and profitability.

SST 504* Seed Production Principles and Techniques in Vegetable Crops3 (2+1)

WHY THIS COURSE:

Seed trade is mainly based on high value low volume seeds. Area under vegetable cultivation is increasing day by day, which demands high area under seed production. The thorough knowledge on vegetable seed production will enable the students to take up seed production venture in low volume high value crops.

OBJECTIVE

To impart knowledge on principles and practices involved in quality seed production of vegetable crops.

THEORY

Unit I :

Importance and present status of vegetable seed industry - principles of seed production in vegetable crops - genetic, agronomic principles - factors influencing vegetable seed production - seed multiplication ratio and seed replacement rate; varietal and hybrid seed production techniques in major solanaceous vegetable crops - tomato, brinjal, chilli and sweet pepper; malvaceous vegetable crop - bhendi.

Unit II :

Varietal and hybrid seed production techniques in cucurbitaceous vegetables - bitter gourd, ridge gourd, snake gourd, bottle gourd, ash gourd, pumpkin, water melon, musk melon and cucumber; cole crops - cauliflower, cabbage, Chinese cabbage, broccoli, Brussle's sprout.

Unit III :

Varietal and hybrid seed production techniques in root vegetables - carrot, beetroot, turnip, radish and knol-khol; seed production techniques in major leguminous vegetables - lab lab, cluster bean, vegetable cowpea, peas and beans.

Unit IV :

Seed production techniques in leafy vegetables - amaranthus, palak, spinach, celery, lettuce,; seed production techniques in onion and TPS.

Unit V :

Clonal multiplication techniques - potato - seed tubers, mini and micro tubers, sweet potato, tapioca, colocasia and yam - clonal standards; merits and demerits; clonal degeneration; techniques of seed production under protected cultivation.

PRACTICALS

Internal and external structure of vegetable seeds - floral biology of vegetable crops; preparation of nurseries and practicing sowing methods - practising the miniset techniques in tapioca, amorphophallus and yams - effect of age of seedlings on crop establishment - emasculation and pollination methods - identification of off-types - practicing roguing operations - physiological maturity indices in vegetable crops - seed extraction methods - maturity stages on seed quality characters - different pickings on seed quality - visit to vegetable seed production fields - visit to private seed industry - seed production planning for varieties and hybrid vegetables - economics of varietal and hybrid seed production in vegetables.

LECTURE SCHEDULE

- 1 Importance and present status of vegetable seed industry
- 2 Genetic and agronomic principles of seed production in vegetable crops
- 3 Factors influencing vegetable seed production
- 4 Seed multiplication ratio and seed replacement rate in vegetable crops
- 5 Principles and methods of varietal and hybrid seed production techniques in tomato and brinjal
- 6 Principles and methods of varietal and hybrid seed production techniques in chilli and sweet pepper
- 7 Principles and methods of varietal and hybrid seed production techniques in bhendi
- 8 Principles and methods of varietal and hybrid seed production techniques in bitter gourd and ridge gourd
- 9 Principles and methods of varietal and hybrid seed production techniques in snake gourd and bottle gourd
- 10 Principles and methods of varietal and hybrid seed production techniques in ash gourd and pumpkin
- 11 Principles and methods of varietal and hybrid seed production techniques in water melon and musk melon
- 12 Principles and methods of varietal and hybrid seed production techniques in cucumber
- 13 Principles and methods of varietal and hybrid seed production techniques in cauliflower

- 14 Principles and methods of varietal and hybrid seed production techniques in cabbage and Chinese cabbage.
- 15 Principles and methods of varietal and hybrid seed production techniques in broccoli and Brussle's sprout.
- 16 Principles and methods of varietal and hybrid seed production techniques in carrot and beetroot
- 17 Mid-semester examination
- 18 Principles and methods of varietal and hybrid seed production techniques in turnip and radish
- 19 Principles and methods of varietal and hybrid seed production techniques in knol-khol
- 20 Techniques of seed production in lab-lab and cluster bean
- 21 Techniques of seed production in vegetable cowpea, peas and beans
- 22 Seed production techniques in amaranthus and palak
- 23 Seed production techniques in spinach and celery
- 24 Techniques of seed production in lettuce
- 25 Seed production techniques in black nightshade and lamb's quarters
- 26 Seed production techniques in moringa
- 27 Techniques of seed production in onion
- 28 True potato seed production technique
- 29 Production of mini and micro seed tubers in potato through clonal multiplication techniques
- 30 Clonal multiplication techniques in sweet potato
- 31 Clonal multiplication techniques in tapioca
- 32 Clonal multiplication techniques in colocasia and yam
- 33 Clonal standards, merits and demerits of clonal multiplication techniques, clonal degeneration
- 34 Seed production techniques under protected cultivation

PRACTICAL SCHEDULE

- 1 Study of internal and external structure of vegetable seeds
- 2 Studying floral biology of solanceous and malvaceous
- 3 Studying floral biology of cucurbitaceous and leguminous vegetable crops
- 4 Preparation of nurseries and practicing sowing methods
- 5 Studying the effect of age of seedlings on crop establishment
- 6 Practicing emasculation and pollination methods

- 7 Identification of off-types, selfed fruits and practicing roguing operations
- 8 Identification of physiological maturity indices in vegetable crops
- 9 Practicing wet seed extraction methods - tomato, brinjal, bitter gourd, bottle gourd, ash gourd, pumpkin, water melon, musk melon and cucumber
- 10 Practicing dry seed extraction methods - chilli, bhendi, ridge gourd and bottle gourd
- 11 Study on the effect of maturity stages on seed quality characters
- 12 Studying the effect of different pickings on seed quality
- 13 Practising the minisett techniques in tapioca, amorphophallus and yams
- 14 Visit to private seed industry and Visit to vegetable seed production fields
- 15 Seed production planning for varieties and hybrid vegetables
- 16 Economics of varietal and hybrid seed production in vegetables
- 17 Final practical examination

OUTCOME EXPECTED

- Successful completion of this course enable student to gain confidence and to become seed entrepreneur in high value low volume vegetable crops.

SST 505 Seed Production Techniques in Fruits, Flowers, Spices, Plantation and Medicinal Crops 3 (2+1)

WHY THIS COURSE:

At present seed industry is expanding towards the low volume and high value seeds. Domestication of fruit, plantation and medicinal plants enable the farmers to cultivate commercially. The seed demands in these crops are increasing day by day. Hence, it is essential to learn the techniques of seed production in fruits, flowers and plantation crops.

OBJECTIVE

To impart comprehensive knowledge on seed production techniques in fruits, flowers, spices, plantation and medicinal crops.

THEORY

Unit I :

Scope for seed production in fruits, flowers, spices, plantation and medicinal crops; factors influencing seed production and quality; propagation methods - seed and clonal propagation; seed and seedling standards; propagation and seed production techniques in major tropical and sub-tropical fruit crops - papaya, mango, citrus, amla, avocado, sapota and banana.

Unit II :

Seed production techniques in commercially important flower crops - petunia, marigold, zinnia, gaillardia, cock's comb, china aster, gomphrena, chrysanthemum, crossandra and balsam - nursery management, clonal propagation, planting, seed crop management, post-harvest seed handling and storage techniques.

Unit III :

Seed production techniques in important spices - coriander, fenugreek, fennel, curry leaf, nutmeg, cinnamon, turmeric, ginger, garlic, pepper and cardamom - nursery management, sowing, seed crop management and post-harvest seed handling and storage techniques.

Unit IV :

Seed production in important plantation crops – coffee, tea, cocoa, rubber, cashew, coconut, arecanut, oil palm and palmyrah - mother tree selection - criteria - nursery management, elite seedling production, planting, plantation management, post-harvest handling and storage techniques.

Unit V :

Methods of quality seed production in important medicinal plants - aswagantha, babchi, phyllanthus, kalmegh, senna, periwinkle, basil, Thipalli, Sida, and mint- nursery management, sowing, seed crop management, post-harvest handling and storage methods.

PRACTICALS

Floral biology and pollination mechanism - collection and identification of seeds of fruits, flowers, spices, plantation and medicinal crops - selection of mother plants - selection of seed nuts and planting methods for elite seedling production in coconut, arecanut and palmyrah - seed germination enhancement techniques in fruits, spices, plantation crops, flowers, medicinal crops - selection of planting materials and sowing methods - nursery management practices for elite seedling production - seed extraction methods - seed grading and upgrading techniques - seed handling and storage techniques of recalcitrant seeds - planning for seed production - economics of seed production in flower crops - visit to mother plant orchard - visit to medicinal garden.

LECTURE SCHEDULE

- 1 Scope and importance of seed production in fruits, flowers, spices, plantation and medicinal crops
- 2 Factors influencing seed production in fruits, flowers, spices, plantation and medicinal crops
- 3 Propagation methods in fruits, flowers, spices, plantation and medicinal crops
- 4 Seed and seedling standards for fruits, flowers, spices, plantation and medicinal crops
- 5 Seed production, post-harvest handling and storage techniques in papaya

- 6 Seed handling techniques in mango
- 7 Seed handling techniques in citrus
- 8 Seed handling techniques in amla
- 9 Seed handling techniques in avacado
- 10 Seed handling techniques in sapota and banana
- 11 Seed production, post-harvest handling and storage techniques in petunia and marigold
- 12 Seed production, post-harvest handling and storage techniques in zinnia and gaillardia
- 13 Seed production, post-harvest handling and storage techniques in cock's comb and china aster
- 14 Seed production, post-harvest handling and storage techniques in gomphrena and chrysanthemum
- 15 Seed production, post-harvest handling and storage techniques in crossandra and balsam
- 16 Seed production, post-harvest handling and storage techniques in coriander and fenugreek
- 17 Mid-Semester Examination
- 18 Seed production, post-harvest handling and storage methods in fennel and curry leaf
- 19 Clonal seed production, post-harvest handling and storage methods in nutmeg and cinnamon
- 20 Clonal seed production, post-harvest handling and storage methods in turmeric garlic and ginger
- 21 Clonal seed production, post-harvest handling and storage methods in pepper and cardamom
- 22 Seed and clonal propagation methods, post-harvest handling and storage techniques in coffee and tea
- 23 Seed production, post-harvest handling and storage techniques in cocoa and rubber
- 24 Clonal multiplication techniques in cashew
- 25 Criteria for selection of mother tree and seed nut, seed nut and seedling standards and elite seedling production in coconut
- 26 Criteria for selection of mother tree and seed nut, seed nut and seedling standards and elite seedling production in arecanut
- 27 Criteria for selection of mother tree and seed nut, seed nut and seedling standards and elite seedling production in oil palm

- 28 Criteria for selection of mother tree and seed nut, seed nut and seedling standards and elite seedling production in palmyrah
- 29 Seed production, post-harvest handling and storage methods in aswagantha
- 30 Seed production, post-harvest handling and storage methods in Thipalli and babchi
- 31 Seed production, post-harvest handling and storage methods in phyllanthus and kalmegh
- 32 Seed production, post-harvest handling and storage methods in senna and periwinkle
- 33 Seed production, post-harvest handling and storage methods in sida and basil
- 34 Seed production, post-harvest handling and storage methods in Mint

PRACTICAL SCHEDULE

- 1 Study on the floral biology and pollination mechanism
- 2 Collection and identification of seeds of fruits, flowers, spices, plantation and medicinal crops
- 3 Selection of mother plants - phenotypic characters and genotypic characters
- 4 Selection of seed nuts and planting methods for elite seedling production in coconut, arecanut and palmyrah
- 5 Practicing germination improvement treatments in fruits and flower crops
- 6 Practicing seed germination enhancement techniques in spices and plantation crops
- 7 Practicing seed germination enhancement techniques in medicinal crops
- 8 Selection of planting materials and sowing methods for vegetative propagules
- 9 Nursery management practices for elite seedling production
- 10 Practicing seed extraction methods - wet and dry methods
- 11 Practicing seed grading, upgrading techniques in fruits, spices, plantation and medicinal crops
- 12 Standardizing grading and upgrading techniques in flower crops
- 13 Study of seed storage techniques in papaya, flower, spices and medicinal crops
- 14 Seed handling and storage techniques of recalcitrant seeds
- 15 Planning for seed production - economics of seed production in flower crops
- 16 Visit to mother plant orchard and medicinal garden
- 17 Final practical examination

OUTCOME EXPECTED

- Successful completion of this course enables the students to take up elite seed and seedling production on commercial scale.

SST 506 Seed Production Techniques in Forage, Pasture and Green Manure Crops 2 (1+1)

WHY THIS COURSE:

Agriculture and animal husbandry in India is interwoven and livestock is the source of income when crop failed. To feed the livestock population, cultivation and seed production of fodder and forage crops are much important. Likewise green manure crops maintain soil health, which created heavy demand for quality seed. Hence, study of seed production techniques in these crops will help to produce quality seeds to meet the growing needs.

OBJECTIVE

To impart knowledge on basic principles and methods of quality seed production in forage and green manure crops.

THEORY

Unit I :

Scope and importance of seed production in forage, pasture and green manure crops - factors influencing seed production - seasonal influence; problems and constraints in seed production - seed set, shattering and seed dormancy; vegetative and clonal propagules and apomictic seed.

Unit II :

Quality seed production techniques in forage legumes - lucerne, hedge lucerne, Stylosanthes, cowpea berseem and leucaena.

Unit III :

Seed production techniques fodder sorghum, fodder maize and fodder oats; seed and planting material production techniques in forage grasses - bajra napier grass, guinea grass, deenanath grass and Cenchrus sp.

Unit IV :

Seed production techniques in major green manure crops - Glyricidia, Sesbania sp., sunnhemp, and Tephrosia sp.

Unit V :

Post-harvest seed handling - processing, threshing, grading and upgrading; dormancy breaking and germination improvement - quality standards for seed and vegetative propagules.

PRACTICALS

Seed collection and identification - seed setting and shattering loss - seed maturity; physiological and harvestable maturity - seed extraction and threshing - seed viability assessment - seed and clonal standards - seed quality analysis - tiller wise quality analysis in forage and fodder - planting materials preparation and planting methods - ratooning on seed quality - identification of dormancy and breaking methods - vegetative propagules preparation and planting methods - seed grading and upgrading - economics of seed production in fodder, forage and green manure crops – visit to fodder seed production fields.

LECTURE SCHEDULE

- 1 Scope and importance of seed production in forage, pasture and green manure crops
- 2 Factors influencing seed production in forage, pasture and green manure crops
- 3 Problems and constraints in seed production of forage, pasture and green manure crops

- 4 Vegetative and clonal propagules, types of apomixis in forage and pasture crops
- 5 Seed production techniques in lucerne and hedge lucerne
- 6 Seed production techniques in stylosanthus and fodder cowpea
- 7 Seed production techniques in berseem and leucaena
- 8 Mid - semester examination
- 9 Seed production techniques in fodder sorghum
- 10 Seed production techniques in fodder maize and oats
- 11 Techniques for seed and planting material production in bajra napier grass, guinea grass, deenanath grass and Cenchrus sp.
- 12 Techniques for seed and planting material production in Glyricidia and Sesbania sp.
- 13 Seed production techniques in sunnhemp and Tephrosia sp.
- 14 Seed processing, threshing, grading and upgrading techniques in forage, pasture and green manure crops
- 15 Seed dormancy and breaking treatments in forage, pasture and green manure crops
- 16 Seed germination improvement techniques in forage, pasture and green manure crops
- 17 Quality standards for seed and vegetative propagules of forage, pasture and green manure crops

PRACTICAL SCHEDULE

- 1 Collection and identification of fodder, forage and green manure seeds
- 2 Study on clonal standards and preparation of planting materials in forage and fodder crops
- 3 Practicing different planting methods in forage and fodder crops
- 4 Estimation of seed setting and shattering loss in fodder, forage and green manure crops
- 5 Study on physiological maturity indices in fodder, forage and green manure crops
- 6 Practicing seed extraction methods in fodder, forage and green manure crops
- 7 Assessment of seed quality in different tillers in forage and fodder crops
- 8 Study on effect of ratooning on seed quality in forage and fodder crops
- 9 Practicing grading and upgrading techniques in forage, fodder and green manure crops
- 10 Assessment of seed viability in forage and fodder crops
- 11 Identification of type of dormancy in forage, fodder and green manure crops

- 12 Practicing different dormancy breaking treatments in forage, fodder and green manure crops
- 13 Practicing seed quality enhancement techniques in forage and fodder crops
- 14 Practicing seed quality enhancement techniques in green manure crops
- 15 Economics of seed production in fodder, forage and green manure crops
- 16 Visit to forage and fodder seed production farms
- 17 Final practical examination

OUTCOME EXPECTED

- After completion of course the students gain confidence to start a seed venture on forage and green manure crops.

WHY THIS COURSE:

Awareness on usage of quality seeds among farmers increases the seed demand. To regulate the seed quality and to avoid the spurious seeds in the market, seed legislation and certification procedures should be known by all the stake holders. Hence, this course will provide comprehensive knowledge on seed policies, seed law enforcement and seed certification procedures to the learners.

OBJECTIVE

To impart knowledge on seed legislation in relation to seed certification and quality control systems.

THEORY

Unit I :

Genesis of seed Industry in India; seed quality control - concept and objectives; regulatory mechanisms and statutory bodies- the Seeds Act, 1966 and the Seed Rules, 1968; role and functions of Central Seed Committee and Central Seed Certification Board.

Unit II :

The Seeds (Control) Order, 1983 - New Policy on Seed Development, 1988 - Exim Policies - National Seed Policy, 2002 - Plant Quarantine Order (Regulation of Import into India), 2003 – Plant Quarantine Act

Unit III :

Introduction to WTO and IPR - UPOV and its role in plant variety protection Seed Bill (2004 and 2011) - PPV&FR Act, 2001 and Rules, 2003 - OECD seed certification schemes - seed certification system in SAARC countries, Europe, Canada, Australia and USA.

Unit IV :

Seed certification - history and objectives; seed certification agency - role of certification agency / department and seed certification officers; phases of seed certification; field and seed standards; field inspection - counting procedures - liable for rejection (LFR) - downgrading and partial rejection - reporting.

Unit V :

Post-harvest inspection – construction of seed lot number; seed sampling - testing - labeling, sealing and grant of certificate - types and specifications for tags and labels; seed lot validity and revalidation; stop sale order, penalties, appellate authority; maintenance of records and registers at seed processing units and seed dealers - verification procedures; role of seed analyst and seed inspector in quality regulation.

PRACTICALS

Preparation of sowing reports - varieties transplanted direct sown crops and hybrids
Verification of sowing report - seed certification procedure -stages of inspection for varieties hybrids and procedure - double count- procedure to remove partial pollen shedders and shedding tassels -LFR, partial rejection and downgrading-reason procedure and preparation of reports.-seed yield estimation single and multiple crops-procedure followed by seed inspector- planting ratio and block method; identification of genetic and physical contaminants and roguing operations - assessment of field standards for different crops - seed yield estimation; inspection and maintenance of records in processing unit - float test - preparation of processing report and assigning seed lot number – Procedure to issue of tag, specification, bagging, labelling and sealing; visit to seed certification department, grow out test field and seed retail shop - verification of records and reporting.

LECTURE SCHEDULE

- 1 Genesis of seed industry in India
- 2 Concept and objectives of seed quality control
- 3 Salient features of different sections of the Seeds Act, 1966
- 4 Parts and clauses of the Seed Rules, 1968
- 5 Role and functions of Central Seed Committee and Central Seed Certification Board
- 6 The Seeds (Control) Order, 1983 and its significance on seed quality control
- 7 New Policy on Seed Development, 1988 and its impact on seed industry
- 8 Exim policies on seed and planting materials
- 9 Salient features of National Seed Policy, 2002
- 10 Plant Quarantine (Regulation of import into India) Order, 2003 & Plant Quarantine Act
- 11 WTO and IPR and their impact on seed trade
- 12 UPOV and its role on plant variety protection
- 13 PPV&FR Act, 2001 and PPV&FR Rules, 2003
- 14 Salient features of Seed Bill, 2004 & 2011
- 15 OECD seed certification schemes
- 16 Seed certification system in SAARC countries, Europe, Canada, Australia and USA
- 17 Mid-semester examination
- 18 History and concept of seed certification
- 19 Role and functions of seed certification agency and organizational set up
- 20 Phases and procedures of seed certification

- 21 Field and seed standards for agricultural crops
- 22 Field and seed standards for horticultural crops
- 23 Certification standards for tissue culture, clonal and vegetative propagules
- 24 Principles and methods of field inspection, counting procedures and reporting
- 25 Procedures for issue of liable for rejection (LFR) report, partial rejection and downgrading
- 26 Post-harvest inspection, processing report, reprocessing and method of assigning seed lot number
- 27 Seed sampling procedures, sampling intensity, types of samples and despatch to STL
- 28 Procedure for labeling, sealing and grant of certificate; types and specifications for tags and labels
- 29 Seed lot validity and revalidation procedures
- 30 Duties of seed certification officers and seed analysts in seed quality regulation
- 31 Duties and powers of seed inspectors in seed law enforcement
- 32 Maintenance of records and registers at processing units, seed dealers and verification procedures
- 33 Procedure for issue of stop sale order, penalties and appellate authority

PRACTICAL SCHEDULE

- 1 Preparation of sowing report for varieties and hybrids in transplanted and direct sown crops
- 2 Yield estimation in single and multiple harvest crops
- 3 Field inspection - estimation of area and isolation distance, stages of inspection for varieties hybrids and procedure double count
- 4 Practicing field counting procedures for row planting and broadcasted varieties
- 5 Practicing field counting procedures for varieties in direct sown and transplanted crops
- 6 Practicing field counting procedures for hybrids in row planting, block method and double count
- 7 Identification of genetic and physical contaminants and practicing roguing operations
- 8 Assessment of field standards for different crops and reporting
- 9 Visit to seed certification department and grow out test field, procedure followed by seed inspector
- 10 LFR, partial rejection and downgrading-reason procedure and preparation of reports

- 11 Practicing post-harvest inspection in pulses and groundnut
- 12 Visit to seed processing unit and studying the procedures of maintaining registers and records
- 13 Practicing float test, preparation of processing report and assigning seed lot number
- 14 Practicing bagging, labelling and sealing of certified seed lots
- 15 Procedure to remove partial pollen shedders and shedding tassels
- 16 Visit to seed retail shop and studying the procedures of maintaining registers and records
- 17 Final practical examination

OUTCOME EXPECTED

- This course will be useful to develop human resource on seed certification and legislation. Successful completion of this course enables students to become a Seed Certification Officer and Seed Inspector.

SST 508* Post Harvest Handling and Storage of Seeds 3 (2+1)

WHY THIS COURSE:

Healthy seeds are the demanding enterprise of the recent era for the production of high yield in the next season. The seeds must be well processed and stored for the maintenance of high-yielding crop. During storage, major losses of seeds are caused by various biotic and abiotic factors. There is a need to apply proper post harvest handling and storage techniques, which ultimately improve the market value and quality of the seed.

OBJECTIVE

To impart knowledge on principles, techniques and methods of seed processing, treatment and storage.

THEORY

Unit I :

Seed processing - objectives and principles; processing sequence - threshing, shelling, ginning, extraction methods; drying - principles and methods; seed cleaning, grading, upgrading - methods - machineries and equipments - scalper, pre-cleaner, cleaner cum grader, specific gravity separator, indented cylinder, disc separator, spiral separator, velvet separator, magnetic separator, needle separator and electronic colour sorter - working principles and functions.

Unit II :

Online seed processing - elevators and conveyers - processing plant - specifications, design and layout; mechanical injury - causes and detection - management.

Unit III :

Seed treatment - methods - pre and mid storage seed treatments, seed treating formulations and equipments; packaging materials - types - bagging and labeling; seed blending - principle and method.

Unit IV :

Seed storage - purpose and importance - factors affecting storage, optimum condition for storage of different seeds; storage principles - Harrington's thumb rule - concepts and significance of moisture equilibrium - maintenance of safe seed moisture - physical, physiological, biochemical and molecular changes during seed storage - storage behaviour of orthodox and recalcitrant seeds - prediction of viability - viability nomograph.

Unit V :

Methods of seed storage - modified atmospheric storage - ultra dry storage - vacuum storage - cryopreservation - germplasm storage - gene banks – IPGRI and NBPGR - International and National seed storage facilities; seed storage godown - structures - maintenance - sanitation.

PRACTICALS

Seed extraction - wet and dry methods - seed drying methods - principle and methods - seed processing sequence for different crops - design of processing plant - equipments - estimation of processing efficiency - practicing seed grading and upgrading techniques - delinting methods - assessment of mechanical damage - visit to seed processing unit - seed packaging - effect of packaging materials on seed longevity - prediction of viability during storage - viability nomograph and accelerated ageing test - assessing physical, physiological and biochemical changes during seed storage - study on storage behaviour of recalcitrant seeds - pre-storage seed treatments - protectants - antioxidants - halogens - practicing seed blending methods – sanitation and fumigation - visit to seed storage godown and cold storage unit.

LECTURE SCHEDULE

- 1 Objectives and principles of seed processing
- 2 Sequence of seed processing for different crops
- 3 Methods of seed threshing, shelling and ginning
- 4 Seed extraction methods for different crops
- 5 Principles and methods of seed drying
- 6 Methods and machineries for seed cleaning, grading and upgrading
- 7 Working principles and functions of scalper and pre-cleaner

- 8 Working principles and functions of cleaner cum grader
- 9 Working principles and functions of specific gravity separator and indented cylinder
- 10 Working principles and functions of disc separator and spiral separator
- 11 Working principles and functions of velvet separator and magnetic separator
- 12 Working principles and functions of needle separator and electronic colour sorter
- 13 Working principles and functions of elevators and conveyers
- 14 Specifications, design and layout of processing plant
- 15 Causes of mechanical injury, detection methods and its management
- 16 Principles and methods of pre and mid storage seed treatments, seed treating formulations and equipments
- 17 Mid- semester examination
- 18 Types of packaging materials, methods of bagging, labeling and stacking
- 19 Principle and method of seed blending
- 20 Importance and stages of seed storage
- 21 Principles of seed storage and Harrington's thumb rule
- 22 Factors affecting seed storage and optimum condition for storage of different seeds
- 23 Influence of seed storage containers on seed longevity
- 24 Concepts and significance of moisture equilibrium in seed storage environment
- 25 Study on physical and physiological changes during seed storage
- 26 Study on biochemical and molecular changes during seed storage
- 27 Study on storage behaviour of recalcitrant seeds
- 28 Prediction of seed viability and viability nomograph
- 29 Controlled and modified atmospheric storage, ultra-dry storage and vacuum storage methods
- 30 Germplasm storage, methods of cold storage and techniques of cryopreservation
- 31 Guidelines for storage in gene banks, IPGRI and NBPGR
- 32 International and National seed storage facilities
- 33 Study on seed storage structures
- 34 Maintenance of seed storage godown

PRACTICAL SCHEDULE

- 1 Practicing seed extraction methods for different crops
- 2 Practicing different seed drying methods

- 3 Study on seed processing sequence for different crops
- 4 Estimation of processing efficiency of cleaner cum grader
- 5 Practicing seed grading and upgrading techniques
- 6 Practicing delinting in cotton
- 7 Assessment of mechanical damage in different crops
- 8 Visit to seed processing unit
- 9 Effect of packaging materials on seed longevity
- 10 Prediction of seed longevity using viability nomograph and accelerated ageing test
- 11 Assessing physical and physiological changes in seeds during storage
- 12 Assessing biochemical changes in seeds during storage
- 13 Determination of seed longevity in recalcitrant seeds
- 14 Studying the effect of different pre-storage seed treatments on seed quality
- 15 Practicing seed blending technique and germination assessment
- 16 Visit to seed storage godown and cold storage unit and study sanitation and fumigation methods
- 17 Final practical examination

OUTCOME EXPECTED

- The students will understand the principles and mechanism involved in seed processing, storage techniques and management practices to arrest the seed deterioration. Students will also acquire skill on seed handling and storage methods on commercial basis.

WHY THIS COURSE:

Seed is the basic input in agriculture and the productivity is mainly depends on field population of plants. By sowing quality seeds, population can be maintained. Hence, it is necessary to know the quality parameters to be analyzed. Through seed treatments, the performance of seed can be improved. Especially to address the drought and climate change the knowledge on seed enhancement techniques is much essential.

OBJECTIVE

To impart knowledge on principles, techniques and methods of seed testing and seed quality enhancement.

THEORY**Unit I :**

Seed testing - history and development; ISTA and its role in seed testing; seed testing in India- seed lot, types of seed and size, seed sampling - intensity and methods, sampling devices - sub sampling- receipt and registration of submitted sample in the laboratory; purity analysis - components and procedure - determination of other distinguishable varieties (ODV) and test weight determination - heterogeneity test - method of testing coated and pelleted seeds; seed moisture estimation - principles and methods, application of tolerances.

Unit II :

Seed germination test - requirements, media and methods - seedling evaluation and reporting results; viability test (TZ test) - principle, procedure and evaluation; vigour tests - concept of seed vigour and vigour test - types of vigour tests - direct and indirect tests - physical, physiological and biochemical tests - principles and methods; seed health test - principles and methods. Seedling evaluation tolerance and reporting results.

Unit III :

Genetic purity assessment - laboratory methods - physical, chemical, biochemical and molecular tests - growth chamber and field testing (Grow Out Test) methods; testing of GM seeds; advanced non-destructive techniques of seed quality analysis - soft x-ray imaging - hyperspectral imaging, thermal imaging - spectroscopy - e-nose and machine vision techniques; storage of guard sample - referral test; application of tolerance in seed testing.

Unit IV :

Seed quality enhancement techniques history and development- classification - physical, physiological and protective seed treatments - special seed treatments; physical seed treatment - liquid floatation, specific gravity separation, irradiation,

electric and electro-magnetic seed treatments - principles and methods - seed pelleting and coating principles, purpose and methods.

Unit V :

Physiological seed enhancement treatments - seed infusion, seed priming - principles and methods - physiological, biochemical and molecular mechanisms; biological seed treatments - integrated seed treatment and concept of designer seed. Pre germination and fluid drilling technique.

PRACTICALS

Sampling and dividing methods - determination of seed test weight and heterogeneity test - physical purity analysis - seed moisture estimation - methods and equipment - seed germination test and seedling evaluation - quick viability (tetrazolium) test and evaluation - vigour tests - genetic purity assessment- seed health tests - physical purity analysis-components procedures and results - direct indirect and special test in laboratory and conventional methods imagine analysis - identify bacteria fungi and insect - seed coating and pelleting use of adhesive and filler materials - Practicing seed infusion and microbial inoculation treatments - designer seed treatment- visit to seed testing laboratory - seed enhancement techniques - physical treatments and water floatation techniques - seed coating and pelleting - seed infusion and seed priming - microbial inoculation - pre-germination technique - integrated seed treatment.

LECTURE SCHEDULE

- 1 History, concept and role of seed quality testing; ISTA and its role on seed quality seed testing in India
- 2 Seed lot, sampling intensity and methods of sampling, types of seed and size, seed samples and heterogeneity testing
- 3 Receipt and registration of submitted sample in the laboratory, Physical purity analysis, determination of other distinguishable varieties (ODV) and test weight determination
- 4 Principles and methods of seed moisture estimation
- 5 Procedures and methods of seed germination test; principle and procedure of viability test
- 6 Concept of seed vigour and vigour tests; principles and methods of physical, physiological and biochemical vigour tests
- 7 Principles and methods of seed health testing
- 8 Mid- semester examination
- 9 Principles and procedures of genetic purity assessment
- 10 Principles and testing procedures for GM seeds - direct indirect and special test in laboratory and conventional methods imagine analysis
- 11 Non-destructive techniques of seed quality analysis - soft x-ray, hyper spectral imaging, thermal imaging, spectroscopy, e-nose and machine vision techniques

- 12 Principles and testing procedures for coated and pelleted; application of tolerance in seed testing; storage of guard sample and referral test
- 13 Principles and methods of physical seed treatments - specific gravity separation, irradiation, electric and electro-magnetic seed treatments
- 14 Principles and methods of seed pelleting and coating.
- 15 Principles and methods of physiological seed treatments - seed infusion and seed priming
- 16 Practicing seed infusion and microbial inoculation treatments and designer seed treatment
- 17 Study on concept of protective, biological and integrated seed treatments pre germination and fluid drilling techniques

PRACTICAL SCHEDULE

- 1 Practicing seed sampling and dividing procedures
- 2 Determination of seed test weight and assessing sample heterogeneity
- 3 Conducting physical purity analysis components procedures and reporting results
- 4 Estimation of seed moisture content
- 5 Conducting seed germination test and seedling evaluation
- 6 Conducting quick viability test and evaluation
- 7 Conducting seed vigour tests
- 8 Biochemical and molecular methods of genetic purity of assessment
- 9 Conducting seed health tests
- 10 Visit to seed testing laboratory
- 11 Practicing water floatation techniques for seed quality enhancement
- 12 Practicing seed coating and pelleting methods use of adhesive and filler materials
- 13 Practicing seed infusion and seed priming techniques
- 14 Practicing microbial inoculation seed treatments
- 15 Practicing pre-germination technique
- 16 Practicing integrated seed treatment in different crops
- 17 Final practical examination

OUTCOME EXPECTED

- Successful completion of this course by the students will be useful to acquire technical skill on seed quality analysis which leads to the development of human resource on seed quality analysis.

SST 510 Seed Technology of Tree Species 2 (1+1)

WHY THIS COURSE:

Tree seed production is an important primary niche for carrying forward sustainable forest resource management. Knowledge of the seed biology of a tree species is essential to successful seed production and handling of tree crops. The life cycle must be known to plan for genetic improvement, production, collection, conditioning, storage and planting of the seeds for propagation of trees.

OBJECTIVE

To make the students gain knowledge on seed production and handling techniques of various tree species.

THEORY

Unit I :

Importance of tree seeds - seed quality in plantation establishment - scope of seed production in tree species; seed structure and its significance in natural regeneration of forest species.

Unit II :

Reproductive biology - angiosperms and gymnosperms - reproductive age - seasonal influence on flowering - reproductive efficiency; factors influencing seed set - pollination - pollinating agents - self incompatibility - seed dispersal - mode and mechanism of dispersal.

Unit III :

Seed stand - selection and delineation - seed production area - seed zone - selection criteria for candidate, plus and elite trees; seed orchards - definition - types - seedling seed orchard and clonal seed orchard; establishment and management of seed orchard - pollen dilution zone; OECD certification programmes for forest reproductive materials and seeds . ISTA certification standards for tree species

Unit IV :

Physiological maturity - maturity indices - determining optimum harvestable maturity; seed collection - methods - factors influencing seed collection - precautions in collection of recalcitrant seeds; seed extraction - methods - wet, dry and cone extraction; drying - critical moisture content - seed processing; dormancy - types of

dormancy in tropical, sub tropical and temperate tree seeds - dormancy breaking treatments; recalcitrant seeds - storage mechanism

Unit V :

Seed production and handling techniques in important tree borne oil seeds (mahua, karanja, neem, simaruba, Callophyllum); timber (teak, sandal, pine, cedar, red sanders, Dalbergia); fuel wood (Acacias); pulp wood (bamboo, Ailanthus, Casuarina, Melia, Eucalyptus); fodder (Leucaena, Albizzia) and ornamental (Cassia, Delonix) tree species.

PRACTICALS

Internal and external tree seed structure - phenology of different tree species -selection procedure of candidate and plus trees - assessment of seed set, physiological and harvestable maturity - natural regeneration in different tree species - seed dispersal methods and dispersal distance in different species -seed collection techniques in important tree species - seed collection - orthodox and recalcitrant seeds - safety measures during collection -seed extraction methods - wet and dry extractions - fruits, pods, cones etc., - study on different seed drying methods and precautions - seed grading and upgrading techniques - seed dormancy breaking methods - germination improvement treatments for elite seedling production - storage of recalcitrant seed - estimation of critical moisture content for safe storage - visit to seed production area and seed orchard - visit to seed processing unit.

LECTURE SCHEDULE

- 1 Importance of tree seeds, influence of seed quality in plantation establishment and its scope
- 2 Significance of seed structure in natural regeneration of forest species
- 3 Reproductive biology of angiosperms and gymnosperms, reproductive age, seasonal influence on flowering and reproductive efficiency
- 4 Influence of pollination, pollinating agents and self-incompatibility on seed set
- 5 Seed dispersal mechanism in tree species
- 6 Selection criteria for candidate, plus and elite tree; selection and delineation of seed production area and seed zone
- 7 Seed orchards - definition and types, establishment and management of seedling seed orchard and clonal seed orchard and pollen dilution zone
- 8 Mid -semester examination
- 9 OECD certification programme for tree seeds ISTA certification standards for tree species
- 10 Study on physiological maturity indices for different tree species
- 11 Methods of seed collection and factors influencing seed collection; precautions in collection of recalcitrant seeds and storage mechanism

- 12 Seed extraction methods, principles of seed drying and processing
- 13 Dormancy - types and dormancy breaking methods in different tree species
- 14 Principles and methods of recalcitrant seed storage
- 15 Seed production, post harvest handling and storage techniques in mahua, karanja, neem, simaruba, Indian laurel
- 16 Seed production, post harvest handling and storage techniques in teak, sandal, pine, cedar, red sanders, shisam and acacia
- 17 Seed production, post harvest handling and storage techniques in bamboo, tree of heaven, casuarina, melia, eucalyptus, leucaena, albizzia, cassia and mayflower

PRACTICAL SCHEDULE

- 1 Study of internal and external seed structure
- 2 Study on phenology of different tree species
- 3 Selection procedures of candidate, plus and elite trees
- 4 Assessment of physiological maturity indices
- 5 Assessing natural regeneration in different tree species
- 6 Study on seed dispersal methods in different tree species
- 7 Seed collection methods and its influence on seed quality
- 8 Practicing seed extraction methods for different tree species
- 9 Practicing seed drying methods for different tree species
- 10 Practicing seed grading and upgrading techniques in tree crops
- 11 Practicing seed dormancy breaking methods in tree seeds
- 12 Practicing seed germination improvement treatments for elite seedling production
- 13 Estimation of critical moisture content for safe storage of recalcitrant seeds
- 14 Study on storage methods on longevity of recalcitrant seeds
- 15 Visit to seed production area and seed orchard
- 16 Visit to tree seed processing unit and tree seed laboratory at IFGTB
- 17 Final practical examination

OUTCOME EXPECTED

- Knowledge of the seed biology of a tree species enable to produce good quality seeds, handling and prevent loss of seeds. The knowledge on sexual life cycle enables them to plan for genetic improvement, production, collection, conditioning, storage, and planting of the seeds.

SST 511 Seed Industry and Marketing Management 2 (1+1)

WHY THIS COURSE:

India has a vibrant seed market. Over the years, the seed industry has evolved side by side with Indian agriculture. Indian seed industry is one of the largest seed market in the world. This course will provide insights in seed industry development, management and seed marketing.

OBJECTIVE

To empower the students to become seed entrepreneurs by imparting knowledge on seed industry management and marketing strategies.

THEORY

Unit I :

Introduction to seed industry - genesis, growth and structure of seed industry - mission and objectives - present status of Indian and global seed industry - role of seed industry in Indian agriculture; government initiatives - seed hubs, seed villages and community seed production system.

Unit II :

Seed industry - organization set up and functions - public, private, MNC's, seed corporations; structure of small, medium, and large scale seed industries, components of seed industry - infrastructure - processing unit - storage godown; public-private partnership - custom seed production - risk management - human resource.

Unit III :

Seed production and distribution systems in state and central government; seed supply chain systems - planning, organization and coordination, staffing, assembling of resources; cost of seed production and distribution - overhead charges.

Unit IV :

Seed marketing - definition - importance - role of marketing; type of markets - domestic and global market - problems and perspectives; marketing policies - seed marketing schemes - marketing channels, responsibilities of dealers - marketing mix.

Unit V :

Seed demand forecasting - purpose - methods and techniques; indenting and seed dispatch procedures and forms - seed store records - maintenance - missing link in seed supply chain; market intelligence - SWOT analysis; seed cost analysis; seed pricing - policy - components of seed pricing - factors - local market rate (LMR) - fixation of procurement and sale price of seed.

PRACTICALS

Status of Indian and global seed industry - assessment of seed demand and supply - planning for establishment of small, medium and large scale seed industry - planning

for seed production and establishment of processing unit - economics of seed production in varieties and hybrids-seed pricing and cost analysis - fixation of seed procurement and sale price - domestic marketing channels - risk management - interaction with seed dealers and distributors - visit to National Seed Corporations - visit to MNCs and expert discussion - case studies and SWOT analysis - visit to modern seed processing unit - custom seed production, contract farming and procurement - procedures, planning and preparation of project proposal to setup a seed industry. Data collection on Status of Indian and global seed industry - assessment of factor influencing farmer preference and assessment of seed demand and supply - study of marketing channels- domestic and international - Maintenance of carry over seeds- assessing risk factors in seeds industries and thier management. Survey and interaction with seed dealer and distributor's.

LECTURE SCHEDULE

- 1 Introduction, genesis, growth and structure of seed industry
- 2 Mission, objectives and status of Indian and global seed industry
- 3 Role of seed industry in Indian agriculture, government initiatives and seed programmes - seed hubs, seed villages and community seed production
- 4 Organizational set up and functions of seed industry
- 5 Role of public, private, MNC's and seed corporations
- 6 Structure of small, medium and large scale seed industries
- 7 Components of seed industry and infrastructure - processing unit and storage godown
- 8 Mid - semester examination
- 9 Public-private partnership and custom seed production, human resource and risk management
- 10 Seed production and distribution systems in public sector and seed supply chain system
- 11 Planning, organization and coordination of seed programme
- 12 Seed marketing - definition, importance, types, problems and perspectives
- 13 Seed marketing policies, schemes, responsibilities of dealers and marketing mix
- 14 Seed demand forecasting - purpose, methods and techniques
- 15 Seed indenting, despatch procedures and missing link in seed supply chain
- 16 Market intelligence, SWOT and seed cost analysis
- 17 Seed pricing policy - LMR and fixation of procurement and sale price

PRACTICAL SCHEDULE

- 1 Study on Data collection on Status of Indian and global seed industry

- 2 Assessment of factor influencing farmer preference and assessment of seed demand and forecasting
- 3 Planning for establishment of small, medium and large-scale seed industry
- 4 Planning for seed production and establishment of processing unit
- 5 Economics of seed production in varieties and hybrids
- 6 Fixation of seed procurement and sale price for varieties
- 7 Fixation of seed procurement and sale price for hybrids
- 8 Study of domestic and international marketing channels
- 9 Maintenance of carry over seeds- assessing risk factors in seeds industries and their management
- 10 Survey and interaction with seed dealers and distributors
- 11 Visit to National Seed Corporation
- 12 Visit to MNCs and expert discussion
- 13 Case studies and SWOT analysis
- 14 Visit to modern seed processing unit and advanced seed storage complex
- 15 Procedures for contractual seed production
- 16 Preparation of project proposal to setup a seed industry
- 17 Final practical examination

OUTCOME EXPECTED

- On completion of this course students will gain knowledge and confidence to manage seed industry and able to address the problems in seed industry and seed marketing.

SST 512 Seed Health Testing and Management 2 (1+1)

WHY THIS COURSE:

Seeds are the foundation for crop production and seed health is related to food production in many ways. Healthy seeds, free from insects and seed transmitted pathogens, are a prerequisite for sustainable food production. Seeds are routinely tested to prevent and control plant pests and pathogens that may affect seed quality, seed movement when introduced into new territories. A seed health test is also frequently a phyto-sanitary requirement imposed by national plant protection authorities. This course aids in timely detection and management of seed borne pest and diseases and supply of pest and disease free seeds in market.

OBJECTIVE

To acquaint the students with principle and practices of seed health testing and management of seed borne pathogens and storage insects.

THEORY

Unit I :

History and economic importance of seed health in seed industry and plant quarantine - important seed borne and seed transmitted pathogens - role of microorganisms in seed quality deterioration; storage and field fungi - effect of storage fungi on seeds - Factors influencing storage fungi and management

Unit II :

Transmission of pathogens - mode and mechanism; mycotoxins - types and their impact on plant, animal and human health; seed health testing methods - direct examination, incubation, serological and molecular methods.

Unit III :

Seed certification standards - production of disease free seeds in agricultural and horticultural crops - management of seed borne pathogens; plant quarantine – Indian and international system, post-entry quarantine - Pest Risk Analysis (PRA); sanitary and phytosanitary system (SPS) - certificates; International seed health initiative (ISHI) on seed health standards.

Unit IV :

Storage pests - insects, mites, rodents and their bionomics - economic importance; insect infestation - sources, kinds and factors influencing, biochemical changes in stored seeds due to insect infestation; detection methods and estimation of storage losses; types of seed storage structures - domestic and commercial.

Unit V :

Fumigation - principles and techniques - types of fumigants; seed preservatives and protectants on seed quality - non-chemical methods of management of storage pests - controlled and modified atmospheric storage - trapping devices - IPM for seed storage.

PRACTICALS

Detection of seed borne pathogens - direct examination; incubation methods; serological and molecular methods; seed transmission of seed borne fungi, bacteria and viruses; identification of storage fungi; management of seed borne pathogens - seed treatment methods; visit to seed production fields; identification of storage insects - internal and external feeders; the effect of pre harvest spray on field carryover storage pests; estimation of storage losses due to pests; methods of detection of insect infestation; management of storage pests - pesticides, dose determination, preparation of solution and application; management of storage pests - non-chemical management methods; demonstration of controlled atmospheric storage; safe handling and use of fumigants and insecticides; visit to seed storage godowns.

LECTURE SCHEDULE

- 1 History and economic importance of seed pathology in seed industry and plant quarantine

- 2 Important seed borne and seed transmitted pathogens- role of microorganisms in seed quality deterioration
- 3 Storage and field fungi - effects of storage fungi on seed quality - factors influencing storage fungi and management
- 4 Transmission of seed borne pathogens - mode and mechanisms
- 5 Mycotoxins - types and its impact on plant, animal and human health
- 6 Seed health testing methods - direct examination, incubation method, serological and molecular methods
- 7 Seed certification standards - production of disease free seeds in agricultural and horticultural crops
- 8 Mid - semester examination
- 9 Integrated management of seed borne diseases
- 10 Plant quarantine - Indian and international systems, post entry quarantine - pest risk analysis - Sanitary and Phytosanitary System (SPS) - certificates; International Seed Health Initiative (ISHI) on seed health standards
- 11 Storage insects, mites and rodents infesting seeds, their development and economic importance
- 12 Factors affecting insect infestation and biochemical changes in stored seeds due to insect infestation
- 13 Sources and kinds of infestation, detection of insect infestation in stored seeds and estimation of storage losses
- 14 Types of seed storage structures - domestic and commercial
- 15 Fumigants and fumigation - principles and techniques, preservatives and seed protectants on seed quality
- 16 Non-chemical methods for managing insect pests of stored seeds
- 17 Insect trapping devices used in seed storage and IPM for seed storage

PRACTICAL SCHEDULE

- 1 Detection of seed borne pathogens - direct examination - dry seed examination, seed washing test
- 2 Detection of seed borne pathogens - Incubation methods - Blotter, 2,4 - D blotter, deep freeze, agar plate methods
- 3 Detection of seed borne pathogens - Serological methods - ELISA and DIBA
- 4 Detection of seed borne pathogens - molecular methods - PCR methods
- 5 Test tube agar method and grow out test to study the transmission of seed borne fungi, bacteria and viruses
- 6 Detection and identification of storage fungi
- 7 Management of seed borne pathogens - practicing seed treatment methods

- 8 Visit to seed production fields
- 9 Identification of storage insects - internal and external feeders
- 10 Estimation of storage losses due to pests
- 11 Physical and chemical methods of detection of insect infestation in stored seeds
- 12 Pesticides, its dose determination, preparation of solution and its application
- 13 Management of storage pests - non - chemical methods
- 14 Study of controlled atmospheric storage
- 15 Practicing fumigation and safe handling of insecticides and fumigants
- 16 Visit to seed storage godowns
- 17 Final practical examination

OUTCOME EXPECTED

- Successful completion of this course will provide knowledge on production of healthy seeds by timely detection and management of seed borne pathogens and storage pests to meet phyto-sanitary requirements.

AGRICULTURAL ENTOMOLOGY

Course Title with Credit Load for M.Sc. in Agricultural Entomology

Course code	Course title	Credit Hours
ENT 501*	Insect Morphology	3 (2+1)
ENT 502*	Insect Anatomy and Physiology	3 (2+1)
ENT 503*	Insect Taxonomy	3 (1+2)
ENT 504	Insect Ecology	3 (2+1)
ENT 505*	Biological Control of Insect Pests and Weeds	3 (2+1)
ENT 506*	Toxicology of Insecticides	3 (2+1)
ENT 507	Host Plant Resistance	2 (1+1)
ENT 508	Concepts of Integrated Pest Management	2 (2+0)
ENT 509	Pests of Field Crops	3 (2+1)
ENT 510*	Pests of Horticultural and Plantation Crops	3 (2+1)
ENT 511	Post Harvest Entomology	2 (1+1)
ENT 512	Insect Vectors of Plant Pathogens	2 (1+1)
ENT 513	Principles of Acarology	2 (1+1)
ENT 514	Vertebrate Pest Management	2 (1+1)
ENT 515	Techniques in Plant Protection	1 (0+1)
ENT 516	Apiculture	3 (2+1)
ENT 517	Sericulture	3 (2+1)
ENT 518	Lac Culture	3 (2+1)
ENT 519	Molecular Approaches in Entomology	3 (2+1)
ENT 520	Plant Quarantine, Biosafety and Biosecurity	2 (2+0)
ENT 521	Edible and Therapeutic Insects	2 (1+1)
ENT 522	Medical and Veterinary Entomology	2 (1+1)
ENT 523	Forest Entomology	2 (1+1)
ENT 591	Master's Seminar	1 (0+1)
ENT 599	Master's Research	30 (0+30)

*Compulsory Major Courses

- I. Course title : Insect Morphology**
II. Course code : ENT 501
III. Credit hours : 3 (2 + 1)
IV. Aim of the course : To acquaint the students with the external morphology of the insect's body and the functioning of various body parts.

Theory

Unit I

External Morphology: Insect body wall structure, cuticular outgrowths, colouration and special integumentary structures in insects, body tagmata, sclerites and segmentation.

Head- Origin, structure and modification; mouthparts, antennae, their types and functioning; tentorium and neck sclerites.

Thorax- Areas and sutures of tergum, sternum and pleuron, pterothorax; wings: structure and modifications, venation, wing coupling apparatus and mechanism of flight; legs: structure and modifications.

Abdomen- Segmentation and appendages; genitalia and their modifications; embryonic and post-embryonic development.

Unit II

Insect sense organs (mechano-, photo- and chemo- receptors); Stridulatory organs. Insect defense; Chaetotaxy.

Unit III

Types of immature stages in insect orders, morphology of egg, nymph/larva and pupa. Comparative study of life history strategies in hemi-metabola and holometabola, immature stages as ecological and evolutionary adaptations.

Practical

Examination, study and illustration of the structure of head (including sclerites and sutures, tentorium); morphology of insect thorax in grasshopper, cockroach and beetles (including tergites, pleuron-episternum, epimeron, sternum-presternum, basisternum, sternellum, endoskeleton of thorax-furca, sternal apophyses, pleural apophyses; articulation of wing- wing sclerites; wing venation; study of insect leg, articulation of leg, study of parts of leg including pretarsus. Abdomen – abdominal appendages, pregenital and genital; Study of stridulatory structures and auditory organs. Types of immature stages in insects; their collection and preservation. Identification of immature insects to orders and families, in endopterygote orders, viz., Diptera, Lepidoptera, Hymenoptera and Coleoptera.

Learning outcome

Students are expected to have a complete understanding of the comparative morphology of the external features of insects that can be utilized in taxonomy, ecology and applied entomology.

- I. Course title : **Insect Anatomy and Physiology**
- II. Course code : **ENT 502**
- III. Credit hours : **3 (2+1)**
- IV. Aim of the course : To impart knowledge about the anatomy and physiology of insect body systems; nutritional physiology; and their applications in entomology.

Theory

Unit I

Scope and importance of insect physiology; physiology of integument, moulting, chemistry of cuticle, biosynthesis of chitin; growth, hormonal control,

metamorphosis and diapause; pheromone- secretion, transmission, perception and reception.

Unit II

Physiology and mechanism of digestion, circulation, respiration, excretion, reproduction, secretion (exocrine and endocrine glands) and nerve impulse transmission in insects.

Unit III

Importance of insect nutrition- role of vitamins, proteins, aminoacids, carbohydrates, lipids, minerals and other food constituents; extra and intra cellular microorganisms and their role in physiology; artificial diets.

Practical

Dissection of different insects to study comparative anatomical details of different systems. Latest analytical techniques for analysis of free amino acids of haemolymph; Determination of chitin in insect cuticle; Examination and count of insect haemocytes; preparation and evaluation of various diets; Consumption, utilization and digestion of natural and artificial diets.

Learning outcome

Students are expected to have a thorough understanding of insect growth and development, physiology of exoskeleton, endoskeleton and different organ systems; action and role of hormones, pheromones, physiology of nutrition and its application.

Suggested Reading

- Simpson SJ. 2007. *Advances in Insect Physiology*, Vol. 33, Academic Press (Elsevier), London, UK.
- Wigglesworth VB. 1984. *Insect Physiology*. 8th Ed. Chapman and Hall, New York.

- I. Course title : **Insect Taxonomy**
- II. Course code : **ENT 503**
- III. Credit hours : **3 (1 +2)**
- IV. Aim of the course : To sensitize the students on the theory and practice of classifying organisms (with special reference to animals) and the rules governing the same. To introduce the students to the classification of insects up to the level of families with hands-on experience in identifying the families of insects with an emphasis on the practical aspects.

Theory

Unit I

Importance of systematics. Principles of biological classification. Schools of systematics. Species concepts and speciation. International Code of Zoological Classification – criteria of availability, family, genus and species group names – formation, how to write a scientific name, type concept, types in the species category, synonymy, homonymy. History of insect classification; Brief evolutionary history of insects- introduction to phylogeny of Super class Hexapoda, Ellipura (Collembola, Protura). Entognatha (Collembola, Protura, Diplura) and Insecta (Archaeognatha, Zygentoma, Insecta), Molecular systematics, DNA barcoding, karyological and biochemical approaches in taxonomy.

Unit II

Distinguishing characters, general biology, habits and habitats of insect orders and economically important families contained in them. Collembola, Protura, Diplura. Class Insecta: Subclass Apterygota–Archaeognatha, Thysanura. Subclass: Pterygota, Division Palaeoptera–Odonata and Ephemeroptera. Division: Neoptera: Subdivision Polyneoptera: Orthopteroid and Blattoid Orders (Oligoneoptera: Plecoptera, Blattodea, Isoptera, Mantodea, Grylloblattodea (including Mantophasmatodea), Dermaptera, Orthoptera, Phasmatodea, Embioptera, Zoraptera), Subdivision: Condyllognatha (Hemipteroid Orders): Thysanoptera,

Hemiptera (Sternorrhyncha, Heteroptera, Coleorrhyncha, Auchenorrhyncha); Psocodea (including Phthiraptera, Mallophaga and Siphunculata).

Unit III

Distinguishing characters, general biology, habits and habitats of insect orders and economically important families contained in them (Continued). Division Holometabola (Hymenoptera, Raphidioptera, Megaloptera, Neuroptera, Strepsiptera, Coleoptera, Trichoptera, Lepidoptera, Sinphonaptera, Mecoptera, Diptera.

Practical

Study of Orders of insects and their identification using taxonomic keys; Keying out families of insects of different major Orders: Odonata, Orthoptera, Blattodea (including Isoptera), Mantodea, Hemiptera, Thysanoptera, Psocodea (including Phthiraptera), Neuroptera, Coleoptera, Diptera, Lepidoptera and Hymenoptera; Field visits to collect insects of different orders.

Learning outcome

Students are expected to know the evolution of arthropods, especially insects and other hexapods, and their hierarchical classification. Acquire working skills for collecting, mounting, and preserving insects. Understand the basic concepts of taxonomic hierarchy, identification, taxonomic characters, variations, taxonomic keys and preparation of taxonomic papers. Identify insects of economic importance up to family levels, taking up the insect orders of agriculture and veterinary importance

I. Course Title : Insect Ecology

II. Course Code : ENT 504

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To teach the concepts of ecology, basic principles of distribution and abundance of organisms and their causes. Study life tables, constructing life tables, organization of communities, diversity indices. Train students in sampling methodology, calculation of diversity indices, relating insect population fluctuations to biotic and/ or abiotic causes.

Theory

Unit I

History and definition. Basic Concepts. Organisation of the Biological world. Plato's Natural Balance *vs* Ecological Dynamics as the modern view. Abundance and diversity of insects. Estimates and Causal factors. Study of abundance and distribution and relation between the two. Basic principles of abiotic factors and their generalised action on insects. Implications for abundance and distribution of organisms including insects- Law of the Minimum, Law of Tolerance and biocoenosis. Systems approach to ecology.

Unit II

Basic concepts of abundance- Model *vs* Real world. Population growth basic models – Exponential *vs* Logistic models. Discrete *vs* Continuous growth models. Concepts of Carrying capacity. Environmental Resistance, Biotic potential of insects and Optimal yield. Vital Statistics- Life tables and their application to insect biology. Survivorship curves. Case studies of insect life tables. Population dynamics- Factors affecting abundance- Environmental factors, dispersal and migration. Seasonality in insects. Classification and mechanisms of achieving different seasonality- Diapause (Quiescence) – aestivation, hibernation.

Unit III

Biotic factors- Food as a limiting factor for distribution and abundance, Nutritional Ecology. Food chain- web and ecological succession. Interspecific interactions- Basic factors governing the interspecific interactions- Classification of interspecific interactions – intraspecific interactions The argument of cost-benefit ratios. Competition- Lotka-Volterra model, Concept of niche ecological homologues, competitive exclusion. Evolution of mimicry, colouration, concept of predator satiation; evolution of life history strategies.

Unit IV

Community ecology- Concept of guild, Organisation of communities- Hutchinson Ratio, May's d/w , Relation between the two and their association with Dyar's Law and Przibram's law. Relative distribution of organisms, Concept of diversity- the Wallacian view. Assessment of diversity. Diversity- stability debate, relevance to pest management. Pest management as applied ecology. Climate change and insect pest/ natural enemy population; ecological engineering.

Practical

Types of distributions of organisms; Methods of sampling insects, estimation of densities of insects and understanding the distribution parameters-Measures of central tendencies, Poisson Distribution, Negative Binomial Distribution; Determination of optimal sample size. Learning to fit basic population growth models and testing the goodness of fit; Fitting Holling's Discequation; Assessment of prey-predator densities from natural systems and understanding the correlation between the two; Assessing and describing niche of some insects of a single guild; Calculation of niche breadth, activity breadth and diagrammatic representation of niches of organisms; Calculation of diversity indices- Shannon's, Simpson's and Avalanche Index and understanding their associations and parameters that affect their values; Problem solving in ecology. Field visits to understand different ecosystems and to study insect occurrence in these systems.

Learning outcome

The students are expected to be well versed with the basic concepts of ecology, ecological succession, population ecology, community ecology, nutritional ecology and different insect-ecosystem interactions

Quantification of insect diversity and abundance, life table analyses, predator- prey and host-parasitoid relations, functional and numerical responses, niche breadth and overlap

I. Course Title : Biological Control of Insect Pests and Weeds

II. Course Code : ENT 505

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To train the students with theory and practice of biological control, mass production techniques and field evaluation of various biological control agents like parasitoids, predators and various entomopathogenic microorganisms.

Theory

Unit I

History, principles and scope of biological control; important groups of parasitoids, predators and pathogens; principles of classical biological control-importation, augmentation and conservation. History of insect pathology, infection of insects by bacteria, fungi, viruses, protozoa, rickettsiae, spiroplasma and nematodes.

Unit II

Biology, adaptation, host seeking behaviour of predatory and parasitic groups of

insects. Classification of parasitoids, important parasitoid families Role of insect pathogenic nematodes, viruses, bacteria, fungi, protozoa, etc., their mode of action. Biological control of weeds using insects. Epizootiology, symptomatology and etiology of diseases caused by the above and the factors controlling these. Defense mechanisms in insects against pathogens.

Unit III

Mass production of quality bio-control agents- techniques, formulations, economics, field release/ application and evaluation. Safety, Quality control and registration standards of entomopathogens

Unit IV

Successful biological control projects, future possibilities of biological control. Importation of natural enemies- Quarantine regulations, biotechnology in biological control. Semiochemicals in biological control.

Practical

Identification of common natural enemies of crop pests (parasitoids, predators, microbes) and weed killers; Visits to bio-control laboratories to learn rearing and mass production of egg, egg- larval, larval, larval-pupal and pupal parasitoids, common predators, microbes and their laboratory hosts, phytophagous natural enemies of weeds; Field collection of parasitoids and predators. Hands-on training in culturing, identification of common insect pathogens.

Learning outcome

Students are expected to have a good understanding of the role of natural enemies in managing pest populations below those causing economic damage. Learn the techniques for mass production of quality bio-agents and their optimal use in IPM.

I. Course Title : Toxicology of Insecticides

II. Course Code : ENT 506

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To orient the students with structure and mode of action of important insecticides belonging to different groups, development of resistance to insecticides by insects, environmental pollution caused by toxic insecticides and their toxicological aspects.

V. Theory

Unit I

Definition and scope of insecticide toxicology; history of chemical control; pesticide use and pesticide industry in India.

Unit II

Classification of insecticides and acaricides based on mode of entry, mode of action and chemical nature; categorization of insecticides on the basis of toxicity – criteria for bees, beneficial insects and other insects in general; structure and mode of action of organochlorines, organophosphates, carbamates, pyrethroids, tertiary amines, New generation insecticides and their classification-diamides, neonicotinoids, oxadiazines, phenyl pyrazoles, compounds affecting energy metabolism, insect growth regulators, microbials, botanicals, new promising compounds/ new insecticide molecules; nano pesticides; drawbacks of insecticide abuse.

Unit III

Principles of toxicology; evaluation of insecticide toxicity; joint action of insecticides- synergism, potentiation and antagonism; factors affecting toxicity of insecticides; insecticide compatibility, selectivity and phytotoxicity. Bioassay definition, objectives, criteria, factors, problems and solutions.

Unit IV

Insecticide metabolism; insect-pest resistance to insecticides; mechanisms and types of resistance; insecticide resistance management and pest resurgence.

Unit V

Insecticide residues, their significance and environmental implications; procedures of insecticide residue analysis. Insecticide Act, registration procedures, label claim, and quality control of insecticides; Central Insecticide Board & Registration Committee-its function and duties- Label claim of pesticides-safe use of insecticides; diagnosis and treatment of insecticide poisoning.

VI. Practical

Insecticide formulations and mixtures; Laboratory and field evaluation of bio-efficacy of insecticides; Bioassay techniques; Probit analysis; Evaluation of insecticide toxicity; Toxicity to beneficial insects; Pesticide appliances; Working out doses and concentrations of pesticides; Procedures of residue analysis.

VII. Learning outcome

Students are expected understand the concept of toxicity, bio-efficacy, insecticide formulations, modes of action of insecticides, estimation of insecticide residues and have significant know-how about the functioning of various types of spray equipments.

I. Course Title : Host Plant Resistance

II. Course Code : 507

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To orient the students with host plant resistance.

V. Theory

Unit I

History and importance of resistance; principles, classification, components, types and mechanisms of resistance.

Unit II

Insect-host plant relationships; theories and basis of host plant selection in phytophagous insects.

Unit III

Chemical ecology, tritrophic relations, volatiles and secondary plant

substances; basis of resistance. Induced resistance – acquired and induced systemic resistance.

Unit IV

Factors affecting plant resistance including biotypes and measures to combat them.

Unit V

Screening techniques; breeding for insect resistance in crop plants; exploitation of wild plant species; gene transfer, successful examples of resistant crop varieties in India and world.

Unit VI

Role of biotechnology in plant resistance to insects.

VI. Practical

Screening techniques for measuring resistance; Measurement of plant characters and working out their correlations with plant resistance; Testing of resistance in important crops; Bioassay of plant extracts of susceptible/ resistant varieties; Demonstration of antibiosis, tolerance and antixenosis.

VII. Learning outcome

Students are expected to acquire a thorough knowledge of the types and basis of mechanisms involved in host plant resistance, screening techniques to measure resistance and insect resistance breeding.

I. Course Title : Concepts of Integrated Pest Management

II. Course Code : ENT 508

III. Credit Hours : 2 (2+0)

IV. Aim of the course

To familiarize the students with principles of insect pest management, including concept and philosophy of IPM. Train students in computation of ETL and implementing IPM programmes.

V. Theory

Unit I

History, origin, definition and evolution of various terminologies. Concept and philosophy, ecological principles, economic threshold concept and economic consideration.

Unit II

National and international level crop protection organizations; Insecticide, regulatory bodies; synthetic insecticide, bio-pesticide and pheromone registration procedures; label claim of pesticides the pros and cons.

Unit III

Tools of pest management and their integration- legislative, quarantine regulations, cultural, physical and mechanical methods; host plant resistance, semiochemicals, chemical, biotechnological and bio-rational approaches in IPM. Pest survey and surveillance, forecasting, types of surveys including remote sensing methods, factors affecting surveys; political, social and legal implications of IPM; pest risk analysis; pesticide risk analysis; cost- benefit ratios and partial budgeting; case studies of successful IPM programmes. ITK-s in IPM, area-wide IPM and IPM for organic farming; components of ecological engineering with successful examples. Artificial intelligence in IPM

Unit IV

Characterization of agro-ecosystems; sampling methods and factors affecting sampling; population estimation methods; crop loss assessment direct losses, indirect losses, potential losses, avoidable losses, unavoidable losses; global and Indian scenario of crop losses. Computation of EIL and ETL; crop modeling; designing and implementing IPM system.

VI. Learning outcome

Students are expected to have significant knowledge of IPM concepts, estimation of losses due to insect pests, computation of ETL, EIL and should be able take management decisions.

VII. Suggested Reading

I. Course Title : Pests of Field Crops

II. Course Code : ENT 509

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To familiarize the students about nature of damage and seasonal incidence of pestiferous insects that cause loss to major field crops and their effective management by different methods.

V. Theory

Systematic position, identification, distribution, host-range, bionomics, nature and extent of damage, seasonal abundance and management of insect and non-insect pests (mites, nematodes, rodents, birds, snails, slugs) and vectors. Insect pests scenario in relation to climate change.

Unit I

Polyphagous pests: grasshoppers, locusts, termites, white grubs, hairy caterpillars, and non-insect pests (mites, birds, rodents, snails, slugs, etc.). Pests of cereals and millets and their management.

Unit II

Pests of pulses, tobacco, oilseeds and their management.

Unit III

Pests of fibre crops, forage crops, sugarcane and their management.

VI. Practical

Field visits, collection and identification of important pests and their natural enemies; Detection and estimation of infestation and losses in different crops;

Study of life history of important insect and non insect pests.

VII. Learning outcome

Students are expected to acquire knowledge of insect pests of field crops, their nature of damage, life history traits and effective management.

VIII. Suggested Reading

I. Course Title : Pests of Horticultural and Plantation Crops

II. Course Code : ENT 510

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To impart knowledge on major pests of horticultural and plantation crops regarding the extent and nature of loss, seasonal history, their integrated management.

V. Theory

Systematic position, identification, distribution, host range, biology, bionomics and seasonal abundance, nature and extent of damage and management of pests of various crops.

Unit I

Fruit Crops- mango, guava, banana, jack, papaya, pomegranate, litchi, grapes, ber, fig, citrus, aonla, pineapple, apple, peach and other temperate fruits.

Unit II

Vegetable crops- tomato, potato, radish, carrot, beetroot, cole crops. Cowpea, brinjal, okra, all gourds, drumstick, leafy vegetables, gherkin etc.

Unit III

Plantation crop- coffee, tea, rubber, coconut, arecanut, oil palm, date palm, cashew, cocoa, etc.; Spices and Condiments- pepper, cardamom, clove, nutmeg, cinnamon, chillies, turmeric, ginger, beetlevine, etc.

Unit IV

Ornamental plants, medicinal and aromatic plants and pests in polyhouses/ protected cultivation.

VI. Practical

Collection and identification of important pests and their natural enemies on different crops; Study of life history of important insect pests and non-insect pests.

VII. Learning outcome

Students are expected to acquire knowledge of insect pests of horticultural, medicinal and plantation crops, their nature of damage, life history traits and effective management.

VIII. Suggested Reading

I. Course Title : Post Harvest Entomology

II. Course Code : ENT 511

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To focus on requirement and importance of grain and grain storage, to understand the role of stored grain pests and to acquaint with various stored grain pest management techniques for avoiding losses in storage.

V. Theory

Unit I

Introduction, history of storage entomology, concepts of storage entomology and significance of insect pests. Post-harvest losses *in toto vis-à-vis* total production of food grains in India. Scientific and socio-economic factors responsible for grain losses. Concept of seed vault.

Unit II

Important pests namely insects, mites, rodents, birds and microorganisms associated with stored grain and field conditions including agricultural products; traditional storage structures; association of stored grain insects with fungi and mites, their systematic position, identification, distribution, host range, biology, nature and extent of damage, role of field and cross infestations and natural enemies, type of losses in stored grains and their effect on quality including biochemical changes.

Unit III

Ecology of insect pests of stored commodities/ grains with special emphasis on role of moisture, temperature and humidity in safe storage of food grains and commodities. Stored grain deterioration process, physical and biochemical changes and consequences. Grain storage- types of storage structures i.e., traditional, improved and modern storage structures in current usage. Ideal seeds and commodities' storage conditions.

Unit IV

Important rodent pests associated with stored grains and their non-chemical and chemical control including fumigation of rat burrows. Role of bird pests and their management. Control of infestation by insect pests, mites and microorganisms. Preventive measures- Hygiene/ sanitation, disinfestations of stores/ receptacles, legal methods. Curative measures- Non-chemical control measures- ecological, mechanical, physical, cultural, biological and engineering. Chemical control- prophylactic and curative- Characteristics of

pesticides, their use and precautions in their handling with special emphasis on fumigants. Insecticide resistance in stored product pests and its management; recent advances (MAS, PPP, HS) in storage pest management; integrated approaches to stored grain pest management.

VI. Practical

Collection, identification and familiarization with the stored grains/ seed insect pests and nature of damage caused by them; Detection of hidden insect infestation in stored food grains; Estimation of uric acid content in infested produce; estimation of losses in stored foodgrains; Determination of moisture content in stored foodgrains; Familiarization of storage structures, demonstration of preventive and curative measures including fumigation techniques; Treatment of packing materials and their effect on seed quality; Field visits to save grain campaign, central warehouse and FCI warehouses and institutions engaged in research or practice of grain storage like CFTRI, Mysore; IGSMRI, Hapur, etc. (only where logistically feasible).

VII. Learning outcome

Students are expected to acquire knowledge of pestiferous insects, mites, rats and birds affecting stored produce, their nature of damage, life history traits and effective management. Detection of insect infestation and familiarization with different storage structures. Learning preventive and curative measures to manage infestation in storage houses.

VIII. Suggested Reading

I. Course Title : Insect Vectors of Plant Pathogens

II. Course Code : ENT 512

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To teach the students about the different groups of insects that act as vectors of plant pathogens, vector-plant pathogen interaction, and management of vectors for controlling disease

V Theory

Unit I

History of developments in the area of insects as vectors of plant pathogens. Important insect vectors and their characteristics; mouth parts and feeding processes of important insect vectors. Efficiency of transmission.

Unit II

Transmission of plant viruses and fungal pathogens. Relation between viruses and their vectors.

Unit III

Transmission of plant viruses by aphids, whiteflies, mealy bugs and thrips.

Unit IV

Transmission of mycoplasma and bacteria by leaf hoppers and plant hoppers.

Unit V

Transmission of plant viruses by psyllids, beetles and mites. Epidemiology and management of insect transmitted diseases through vector management.

VI Practical

Identification of common vectors of plant pathogens-aphids, leafhoppers, whiteflies, thrips, beetles, nematodes; Culturing and handling of vectors; demonstration of virus transmission through vectors- aphids, leafhoppers and

whiteflies; Vector rearing and maintenance; Estimating vector transmission efficiency, studying vector-virus host interaction.

VII Learning outcome

Students are expected to be well versed with insect vectors of plant pathogens, acquire knowledge on disease transmission and vector management techniques.

I. Course Title : Principles of Acarology

II. Course Code : ENT513

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To acquaint the students with external morphology of different groups of mites, train in identification of commonly occurring families of plant associated mites, provide information about important mite pests of crops and their management.

V. Theory

Unit I

History of Acarology; importance of mites as a group; habitat, collection and preservation of mites. Soil arthropods and their classification, habitats and their identification.

Unit II

Introduction to morphology and biology of mites and ticks. Broad classification- major orders and important families of Acari including diagnostic characteristics. Estimation of populations; sampling and extraction methods for soil arthropods.

Unit III

Economic importance, seasonal occurrence, nature of damage, host range of mite pests of different crops, mite pests in polyhouses, mite pests of stored products and honeybees. Management of mites using acaricides, phytoseiid predators, fungal pathogens, etc. Culturing of phytophagous, parasitic and predatory mites. Mode of action of acaricides, resistance of mites and ticks to acaricides, its management.

VI. Practical

Collection of mites from plants, soil and animals; Extraction of mites from soil, plants and stored products; Preparation of mounting media and slide mounts; External morphology of mites; Identification of mites up to family level using keys; Studying different rearing techniques for mites.

VII. Learning outcome

Students are expected to identify mites up to family level.

Acquire knowledge of mite pests of cultivated crops, their nature of damage, life history traits and effective management.

I. Course Title : Vertebrate Pest Management

II. Course Code : ENT514

III. Credit Hours : 2(1+1)

IV. Aim of the course

To impart knowledge on vertebrate pests like birds, rodents, mammals and others of different crops, their biology, damage they cause and management strategies.

V. Theory

Unit I

Introduction to vertebrate pests of different crops; biology of vertebrate pests such as rodents, birds and other mammals.

Unit II

Bio-ecology of birds of agricultural importance, patterns of pest damage and assessment, roosting and nesting systems in birds; management of pestiferous birds; conservation of predatory birds.

Unit III

Bio-ecology of rodents of agricultural importance, patterns of pest damage and assessment, burrowing pattern and habitat of rodents; management of pestiferous rodents.

Unit IV

Bio-ecology of higher vertebrates of agricultural importance, patterns of damage and assessment, their habitat; management of pestiferous vertebrates.

Unit V

Management strategies- physical (trapping, acoustics and visual), chemical (poisons, repellents, fumigants and anticoagulants), biological (predators, parasites), cropping practices, alteration of habitats, diversion baiting and other eco-friendly methods – Operational practices- baiting, equipments and educative programmes.

VI. Practical

Identification of important rodents, birds and other vertebrate pests of agriculture, food preference and hoarding; Social behaviour, damage assessment, field survey, population estimation, management strategies: preventive and curative methods.

VII. Learning outcome

Students are expected to be well versed with vertebrate pest diversity, their nature of damage, life history traits, behaviour and effective management.

VIII. Suggested Reading

I. Course Title : Techniques in Plant Protection

II. Course Code : ENT515

III. Credit Hours : 1 (0+1)

IV. Aim of the course

To acquaint the students with appropriate use of plant protection equipments and techniques related to microscopy, Spectrophotometry, Chromatography.

V. Practical

Pest control equipments, principles, operation, maintenance, selection, and application of pesticides; Seed dressing, soaking, root-dip treatment, dusting, spraying, and pesticide application through irrigation water; Application of drones in plant protection; Soil sterilization, solarization, techniques to check the spread of pests through seed, bulbs, corms, cuttings and cutflowers; Uses of light, transmission and scanning electron microscopy; Protein isolation from the pest and host plant and its quantification using spectrophotometer and molecular weight determination using SDS/ PAGE; Use

of tissue culture techniques in plant protection; Application of soil fumigants. Spectrophotometry, Chromatography – HPLC, LCMS, NMR, Molecular docking etc. Visit and exposure to Research laboratories to familiarize with Instrumental analysis

VI. Learning outcome

Students are expected to have a good knowledge of different plant protection equipments and techniques related to pestforecasting.

VII. Suggested Reading

- Alford DV. 1999. *A Textbook of Agricultural Entomology*. Blackwell Science, London.
- Crampton JM and Eggleston P. 1992. *Insect Molecular Science*. Academic Press, London.

I. Course Title : Apiculture

II. Course Code : ENT 516

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To impart knowledge about the honey bees, and their behaviour and activities; bee husbandry, bee multiplication, bee enemies and diseases and their management; hive products, apitherapy; and managed bee pollination of crops

V. Theory

Unit I

Historical development of apiculture at global level and in India; Classification of bees; global distribution of genus *Apis* and races; Morphology and anatomy of honey bee; Honey bee biology, ecology, adaptations; Honey bee behaviour – nest founding, comb construction, brood care, defense, other in-house and foraging activities; Bee pheromones; Honey bee communication.

Unit II

Commercial beekeeping as an enterprise; Design and use of bee hives; Apicultural equipment; Seasonal bee husbandry; Honey bee nutrition and artificial diets; Absconding, swarming, drifting – causes and management; Curbing drone rearing; Laying worker menace – causes, signs and management.

Unit III

Bee genetics; Principles and procedures of bee breeding; Screening of honey

bee colonies; Techniques in mass queen bee rearing; Mating nuclei and their establishment; Selective mating; Queen bee management; Bee packages.

Unit IV

Ectoparasitic and endoparasitic bee mites – biology, ecology, nature and symptoms of damage, management tactics; Wax moths, wasps and ants – biology, ecology, nature and symptoms of damage, management tactics; Predatory birds, their damage potential and management tactics; Pesticide poisoning to honey bees, signs and protection; Protocols in evaluation of pesticide toxicity to honey bees.

Unit V

Honey – composition, properties, crystallization, post-harvest handling and processing; Honey quality standards and assessment; Apicultural diversification – potential and profitability; Production/ collection of bee pollen, propolis, royal jelly, bee venom and bees wax and their post-harvest handling; Apitherapy; Value addition of hive products; Development of apiculture project.

Unit VI

Non-*Apis* pollinators, their augmentation and conservation; Role of bee pollinators in augmenting crop productivity; Managed bee pollination of crops.

VI. Practical

Morphological characteristics of honeybee; Mouthparts; digestive, respiratory and reproductive adaptations in different castes of honeybees; Recording of colony performance; Seasonal bee husbandry practices; Swarming, queenlessness, swarming, laying workers menaces, etc. and their remedies; Innovative techniques in mass queen bee rearing; selection and breeding of honey bees; Instrumental insemination; formulation of artificial diets and their feeding; Production technologies for various hiveproducts; Bee enemies and diseases and their management; Recording pollination efficiency; Application of various models for determining pollination requirement of crop; Developing a beekeeping project.

VII. Learning outcome

Students are expected to have a comprehensive knowledge of bee biology, physiology and bee keeping/apiculture.

With practical training it is expected that students develop entrepreneurial skills for apiculture.

I. Course Title : Sericulture

II. Course Code : ENT 517

III. Credit Hours : 3 (2+1)

IV. Aim of the Course

To familiarize the students with entrepreneurial opportunities in entomology, sericulture in particular, and providing information on silk worm rearing, production and management.

V. Theory

Unit I

History of Sericulture, importance, organizations involved in sericulture activities, silkworm types, characteristic features of different silkworms, distribution, area and silk production.

Unit II

Mulberry species, ecological requirements, cultivation, improved varieties, propagation methods, sapling production, planting and pruning techniques; pest and diseases, management strategies; intercropping, water and weed management. Food plants of eri silkworm, castor cultivation,

intercultural operations, nutrient and water management; method of harvest; host plants of Tasar, nursery and cultivation, selection of seed, soaking and heap making, pruning techniques. Food plants of Muga silkworm, Som and Soalu propagation methods; nursery techniques; intercultural operations and weed management.

Unit III

Silkworm origin – classification based on voltinism, moultnism, geographical distribution and genetic nature – pure races –multivoltine and bivoltine races – cross breeds – bivoltine hybrids –Races and hybrids of mulberry, eri, tasar and muga silkworm- Morphology and biology of silkworm, sex limited characters; anatomy of digestive and excretory systems of larva; structure and function of silk glands.

Unit IV

Rearing house, types, Rearing appliances disinfection, room and bed disinfectants; egg incubation methods, Chawki rearing, feeding, cleaning and spacing; rearing of late age worms, feeding, cleaning, spacing and moulting care; mountages, cocoon harvesting and marketing; pests and diseases of silkworms and their management. Marketing and Recent advances in sericulture

Unit V

Post cocoon technology, stifling, cocoon cooking, brushing, reeling, re-reeling, bleaching, degumming, dyeing, printing and weaving, different reeling machines; value addition in sericulture; economics of sericulture.

VI. Practical

Morphology of mulberry plants; Identification of popular mulberry genotypes; Nursery bed and main field preparation; Planting methods; Identification of nutrient deficiency symptoms; Pruning and harvesting methods; Identification of pests and diseases of mulberry, *Terminalia arjuna*, *Terminalia tomentosa*, Som and Soalu- Nursery and pruning techniques – Intercultural operations;

Morphology of silkworm – Identification of races – Dissection of mouth parts and silk glands – Disinfection techniques – rearing facilities – silkworm rearing – feeding, cleaning and spacing – Identification of pests and diseases of mulberry silkworm – hyperparasitoids and mass multiplication techniques – silkworm egg production technology –Tasar, Eri and muga silkworms – rearing

methods–pests and diseases of non-mulberry silkworms – Visit to grainage, cocoon market and silk reeling centre – Economics of silkworm rearing.

VII. Learning outcome

Students taking up sericulture are expected to have a thorough knowledge of silkworm morphology, races, biology, and all the practices of rearing for silk production.

They should be well versed with the pests and diseases of silkworm and their management.

With practical training it is expected that students develop entrepreneurial skills for sericulture or link up with industries to sell cocoons for silk production or guide farmers engaged in silk worm rearing/ sericulture.

www.csrtimys.res.in

I. Course Title : Lac Culture

II. Course Code : ENT 518

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To familiarize the students with entrepreneurial opportunities in entomology with an emphasis on lac culture in particular. To provide information on lac insect rearing, production and management.

V. Theory

Unit I

History of lac production; importance, potential of lac production in India; organizations involved in lac production activities; strains of lac insects and lac crops – distribution, area and production of different strains of lac.

Unit II

Steps and operation of lac production; lac host plant species, ecological requirements, their cultivation; seasons of host plants, harvest time of host plants, rearing seasons; grouping of host trees, pruning methods, timing; lac host plant pests and diseases; management strategies.

Unit III

Basic morphology and taxonomy of lac insect, strains of lac insect and their characteristics; composition of lac; biology of lac insect, species diversity and distribution.

Unit IV

Introduction, lac insect-host plant interaction; selection of brood lac, local practices, improved alternatives, coupe system; propagation of lac insects: natural self inoculation, artificial inoculation; inoculation process and duration; removal of phunki, harvesting of lac, immature harvesting, mature harvesting and time of harvesting. Predators and parasitoids of lac insect, hyperparasites, diseases and their management.

Unit V

Lac production stages; factors affecting yield and quality of shellac. Pure stock of host plants (kusum, palas, ber, pigeonpea, semialata) ;alternative method; technology of brood preserving. Host-specific technologies – cultivation on specific host plants; integration of lac cultivation with agro-forestry and horticulture; socio-economic potential of lac; export-import of lac/ lac products; marketing of lac and its products. Lac processing and value addition; entrepreneurship development.

VI. Practical

Lac host cultivation and lac production practices; Equipments for lac production; Conventional and advanced methods; Coupe system of lac production; Cultivation of suitable host plants; Pruning of host trees;Herbarium of host plants; Strains of lac insects; Brood lac selection and treatment for pest management; Slide preparation of adult and immature stages; Inoculation of host tree; Identification of natural enemies of lac insect and their management; Molecular characterization of lac insect; Harvesting; Process of manufacture of seed lac, shell lac from stick lac; Grading of seed lac and shellac; Marketing of lac products and byproducts.

VII. Learning outcome

- The students are expected to have good knowledge of lac host trees and their maintenance for lac production.
- It is expected that they should perfect the most suitable techniques for lac production with a good knowledge about diseases and natural enemies of the lac insect.
- With practical training it is expected that students are able to guide landless labourers, who bring stick lac as forest produce.

VIII.Suggested Reading

- David BV and Ramamurthy VV. 2011.*Elements of Economic Entomology*, 6th Edition, Namrutha Publications, Chennai.
- Sharma KK and Ramani S. 2010.*Recent advances in lac culture*. ICAR-IINRG, Ranchi.

- I. **Course Title : Molecular Approaches In Entomology**
- II. **Course Code : ENT 519**
- III. **Credit Hours : 3 (2+1)**
- IV. **Aim of the course**

To acquaint students the latest techniques used in molecular biology.

V. Theory

Unit I

Introduction to molecular biology, Historical perspective of molecular entomology, techniques used in molecular biology.

Unit II

DNA recombinant technology, identification of genes/ nucleotide sequences for traits of interest, techniques of interest in plants and microbes.

Unit III

Genes of interest in entomological research- marker genes for sex identification, peptides and neuro peptides, JH esterase, St toxins and venoms, chitinase, Plant derived enzyme inhibitors, protease inhibitors, trypsin inhibitors, α -amylase inhibitors, lectins, terpenes and terpenoids;

Unit IV

Genetically engineered microbes -Genetic engineering in baculoviruses and fungal biocontrol agents for greater efficacy against insect pests. *Bacillus thuringiensis* endotoxins, mode of action of cry genes, classification and properties, synthetic Bt toxin genes Transgenic plants for pest resistance. Effects of transgenic plants on pest biology and development, resistance management strategies in transgenic crops, molecular mechanism of insecticide resistance

Unit V

Genetic-based methods for agricultural insect pest management, insect pest management through sterile insect technique and release of insects carrying a dominant lethal gene. Methods and application of insect transgenesis, transgenics in silkworm and honeybees. Molecular tools for taxonomy and phylogeny of insect pests, DNA-based diagnostics. Nano technology and its application. Importance of bioinformatics in molecular biological experiments

VI Practical

Isolation of DNA/RNA; Agarose gel electrophoresis of DNA, quantification of DNA by spectrophotometric and agarose gel analysis, PCR amplification of mitochondrial cytochrome oxidase subunit I gene (cox1) and 16S rRNA gene, cloning of PCR amplicons in standard plasmid vectors for sequencing, confirmation of the insert, miniprep of recombinant plasmid DNA, BLAST analysis and multiple sequence alignment of the sequence with sequences already available in GenBank; Isolation of host plant proteins, SDS-PAGE

of the isolated proteins.

VII Learning outcome

The students are expected to be well versed with the basic techniques used in molecular biology.

Students are expected to have firsthand knowledge of the molecular approaches employed in Entomology with hand on experience with the basic techniques.

I. Course Title : Plant Quarantine, Biosafety and Biosecurity

II. Course Code : ENT 520

III. Credit Hours : 2 (2+0)

IV. Aim of the course

To acquaint the learners about the principles and the role of Plant Quarantine in containment of pests and diseases, plant quarantine regulations and set-up. Also, to facilitate students to have a good understanding of the aspects of biosafety and biosecurity.

V. Theory

Unit I

Definition of pest, pesticides and transgenics as per Govt. notification; relative importance; quarantine – domestic and international. Quarantine

restrictions in the movement of agricultural produce, seeds and planting material; case histories of exotic pests/ diseases and their status.

Unit II

Plant protection organization in India. Acts related to registration of pesticides and transgenics. Insecticide regulatory bodies, synthetic insecticides, bio-pesticides and pheromone registration procedures. History of quarantine legislations, PQ Order 2003. Environmental Acts, Industrial registration; APEDA, Import and Export of bio-control agents.

Unit III

Identification of pest/ disease free areas; contamination of food with toxigens, microorganisms and their elimination; Symptomatic diagnosis and other techniques to detect pest/ pathogen infestations; VHT and other safer techniques of disinfection/ salvaging of infected material.

Unit IV

WTO regulations; non-tariff barriers; pest risk analysis, sanitary and phytosanitary measures. Global Positioning System (GPS) and Geographic Information System (GIS) for plant biosecurity, pest/ disease and epidemic management, strategies for combating risks and costs associated with agroterrorism event, mitigation planning, integrated approach for biosecurity. Biosafety, policies and regulatory mechanism, Cartagena Protocol on Biosafety and its implications, issues related to release of genetically modified crops.

VI. Learning outcome

Students are expected to have a good knowledge on the rules and regulations of Plant Quarantine, WTO regulations, GAP, Sanitary and Phytosanitary measures.

VII. Suggested Reading

- I. Course Title : Edible and Therapeutic Insects**
- II. Course Code : ENT 521**
- III. Credit Hours : 2(1+1)**
- IV. Aim of the course**
To create awareness and acquaint students about the contribution that insects make to ecosystems, diets, food security and livelihoods in developed and developing countries.
- V. Theory**
- Unit I**
Edible and therapeutic insects: the concept, definition, and importance.
- Unit II**
History and origin of insects as food, feed and medication; important insect species and insect products consumed.
- Unit III**
Edible insect ecology, conservation and management of edible insect resources; environmental opportunities of insect rearing.
- Unit IV**
Nutritional composition and role of insects in food security.
- Unit V**
Insect farming: the concept, definitions, and rearing techniques.
- Unit VI**
Processing edible insects for food and feed.
- Unit VII**
Food safety and preservation, edible insects for livelihood security.
- VI. Practical**
Survey and identification of edible and therapeutic insect species; Collection and preservation of edible and therapeutic insect specimens; Rearing techniques of edible insect species; Harvesting techniques of edible insects from natural environment; Analysis of proximate elemental composition, antioxidant and anti-nutritional properties and microbial aspects of preservation.
- VII. Learning outcome**
Students are expected to be aware of insects for edible and therapeutic use; their nutritional composition. Should know the techniques of farming and processing insects for human and animal consumption.
- VIII. Suggested Reading**
- Halloran A, Flore R, Vantomme P and Roos N 2018. Edible insects in

sustainable food systems.

I. Course Title : Medical and Veterinary Entomology

II. Course Code : ENT 522

III. Credit Hours : 2(1+1)

IV. Aim of the course

To study the major insect, mite, and tick vectors of disease to man and animals. Students will learn to identify and understand the life cycles, morphology, and behavior of mosquitoes, ticks, mites, lice, fleas, and other disease vectors.

V. Theory

Unit I

Introduction to medical, veterinary and forensic entomology; Classification of Arthropod-borne diseases; Hematophagy, disease transmission and epidemiology; flies (Diptera) of medical and veterinary Importance; moth flies: Leishmaniasis and Bartonellosis; biting midges (Ceratopogonidae).

Unit II

Mosquito taxonomy, biology, and behavior; mosquito viruses: EEE, VEE, SLE, yellow fever, mosquito surveillance; malaria; horse flies, deer flies: EIA, anaplasmosis; muscid flies; Myiasis (Muscoidea); myiasis and louse flies; black flies of medical and veterinary Importance; filariasis: mansonellosis, onchocerciasis.

Unit III

Lice of medical and veterinary importance; rickettsial diseases: epidemic typhus, etc.; mites: rickettsial pox; mites and acaricidal: mange, scabies, chiggers; spiders and scorpions; fleas (Siphonaptera) of medical and veterinary importance; plague and murine typhus.

Unit IV

Ticks of medical and veterinary importance; lyme disease, rocky mountain spotted fever, tularemia; true bugs (Hemiptera): kissing bugs and bedbugs; chagas disease; tsetse flies; Lepidoptera and Hymenoptera of medical and veterinary importance.

VI. Practical

Identification of arthropod Classes, Orders and Families of medical and

veterinary importance; Collection, segregation, curing insect and arachnid specimens, their preservation; Management of insect and mite pests of medical and veterinary importance; Study of some practical aspects in forensic entomology.

VII. Learning outcome

Students are expected to identify the arthropods of medical and veterinary importance; identify the diseases transmitted by these arthropod vectors and suggest management options.

VIII. Suggested Reading

I. Course Title : Forest Entomology

II. Course Code : ENT523

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To promote a more global theoretical understanding of pest population dynamics and the causes of forest insect outbreaks: covering pests of both natural forests and plantations, the diversity of tropical forest insects, their ecological functions, the concept of pests and the incidence of pests in natural forests, plantations and stored timber.

V. Theory

Unit I

Introduction to forestry in the tropics, tropical forests: characteristics and types of tropical forests, management of tropical forests and the problems in their management; plantation forestry: beginnings, expansion and current status.

Unit II

History of tropical forest entomology, diversity of forest insects: structural and functional diversity – the feeding guilds, concept of pests, ecology of insects in forest environment, concept and functioning of ecosystem, role of insects in ecosystem processes of tropical forests: insects as primary consumers, secondary and tertiary consumers, as decomposers, as food, pollinators and other ecological interactions.

Unit III

Insect pests in natural forests, general pest incidence, pest outbreaks: Lepidoptera, Coleoptera, Hemiptera, and Hymenoptera; insect pests in plantations, nursery pests, sapling pests, pests of older plantations and their impact; insect pests of stored timber, categories of wood destroying insects and their damage: termites and beetles. Pests of major agroforestry trees like Teak, Mahogany, Ailanthus. Pests of bamboos and reeds in field and storage

Unit IV

Population dynamics, characteristics of population growth, factors affecting population growth, principles governing population dynamics, types and causes of forest insect outbreaks; general issues in forest entomology: enemies' hypothesis, resource concentration hypothesis, pest evolution hypothesis; pest problems in plantations of indigenous vs exotic species; pest problems in monocultures vs mixed plantations.

Unit V

Management of tropical forest insect pests, historical development and present status of tropical forest pest management, overview of pest management options: preventive measures, remedial measures; unique features of forest pest management; constraints to forest pest management in the tropics; guidelines for the practice of forest pest management in the tropics.

Unit VI

Insect pests in plantations: Location-specific case studies.

VI. Practical

Collection, identification and preservation of important insect pest specimens of forest plants and some damaged material; Detection of insect infestation and assessment of losses due to insect pests; Habitat management for vertebrate and insect pests; Fire control methods and devices; Familiarization with the meteorological and plant protection equipment, application of pesticides and bio-control agents in the management of insect pests in nurseries and plantations.

VII. Learning outcome

Students are expected to acquire knowledge of insect pests of forest nurseries, forests and plantations, their nature of damage, life history traits and effective management.

Likewise, students are expected to have a thorough knowledge of pestiferous insects of stored timber, hide and other forest produce.

Course Title with Credit Load for Ph.D in Agricultural Entomology

Course code	Course title	Credit Hours
ENT 601	Insect Phylogeny and Systematics	3 (1+2)
ENT 602**	Insect Physiology and Nutrition	3 (2+1)
ENT 603	Insect Ecology and Diversity	3 (2+1)
ENT 604	Insect Behaviour	2 (1+1)
ENT 605**	Bio-inputs for Pest Management	3 (2+1)
ENT 606**	Insect Toxicology and Residues	3 (2+1)
ENT 607	Plant Resistance to Insects	2 (1+1)
ENT 608	Acarology	2 (1+1)
ENT 609	Molecular Entomology	2 (1+1)
ENT 610	Integrated Pest Management	2 (2+0)
ENT 691	Doctoral Seminar – I	1 (0+1)
ENT 692	Doctoral Seminar – II	1 (0+1)
ENT 699	Doctoral Research	75 (0+75)

**Core courses for Doctoral programme

I. Course Title : Insect Phylogeny and Systematics

II. Course Code : ENT 601

III. Credit Hours : 3 (1+2)

IV. Aim of the course

To familiarize the students with different schools of classification, phylogenetics, classical and molecular methods, evolution of different groups of insects. Detailed study about the International Code of Zoological Nomenclature; ethics and procedure for taxonomic publications.

V. Theory

Unit I

History of taxonomy. Detailed study of three schools of classification- numerical, evolutionary and cladistic. Methodologies employed. Development of phenograms, cladograms, molecular approaches for the classification of organisms. Methods in identification of homology. Species concepts, speciation processes and evidences. Zoogeography.

Unit II

Detailed study of International Code of Zoological Nomenclature, including

appendices to ICZN; scientific ethics.

Unit III

Concept of Phylocode and alternative naming systems for animals. A detailed study of selected representatives of taxonomic publications – small publications of species descriptions, works on revision of taxa, monographs, check lists, faunal volumes, etc. Websites related to taxonomy and data bases.

Unit IV

Molecular taxonomy, barcoding species and the progress made in molecular systematics.

VI. Practical

Collection, curation and study of one taxon of insects- literature search, compilation of a checklist, study of characters, development of character table, and construction of taxonomic keys for the selected group; Development of descriptions, photographing, writing diagrams, and preparation of specimens for “type like” preservation, Submission of the collections made of the group; Hands on training in DNA isolation, sequencing etc. Multivariate analysis techniques for clustering specimens into different taxa, and development of phenograms; Rooting and character polarization for developing cladograms and use of computer programmes to develop cladograms.

VII. Learning outcome

Scholars are expected to understand the concepts of taxonomic hierarchy, study taxonomic characters, variations, intra-specific phenotypic plasticity; prepare taxonomic keys for specific groups and write taxonomic papers and reviews.

Scholars should be able to identify insects of economic importance up to family/ generic levels and specialize in any one group of insects up to species level identification.

I. Course Title : Insect Physiology and Nutrition

II. Course Code : ENT 602

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To impart knowledge to the students on detailed physiology of various secretory and excretory systems, moulting process, chitin synthesis, physiology of digestion, transmission of nerve impulses, nutrition of insects, pheromones, etc.

V. Theory

Unit I

Physiology and biochemistry of insect cuticle and moulting process. Biosynthesis of chitin, chitin-protein interactions in various cuticles, hardening of cuticle.

Unit II

Digestive enzymes, digestive physiology in phytophagous, wood boring and wool feeding insects, efficiency of digestion and absorption, role of endosymbionts in insect nutrition, nutritional effects on growth and development; physiology of excretion and osmoregulation, water conservation mechanisms.

Unit III

Detailed physiology of nervous system, transmission of nerve impulses, neuro- transmitters and modulators. Production of receptor potentials in different types of sensilla, pheromones and other semiochemicals in insect life, toxins and defense mechanisms.

Unit IV

Endocrine system and insect hormones, physiology of insect growth and development- metamorphosis, polymorphism and diapause. Insect behaviour in IPM- Concept of super-normal stimuli and behavioural manipulation as potential tool in pest management, use of semio-chemicals, auditory stimuli and visual signals in pest management.

VI. Practical

Preparation of synthetic diets for different groups of insects; Rearing of insects on synthetic, semi-synthetic and natural diets; Determination of co-efficient of utilization; Qualitative and quantitative profile of bio-molecules: practicing analytical techniques for analysis of free amino acids of haemolymph; Zymogram analyses of amylase; Determination of chitin in insect cuticle; Examination and count of insect haemocytes.

VII. Learning outcome

The scholars are expected to have thorough theoretical and practical knowledge of insect physiology that can be made use of in practical/applied entomological aspects.

Understand how physiological systems in insects are integrated to maintain homeostasis.

I. Course Title : Insect Ecology and Diversity

II. Course Code : ENT 603

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To impart advanced practical knowledge of causal factors governing the distribution and abundance of insects and the evolution of ecological characteristics. Study insect-plant interactions; get acquainted with biodiversity and conservation.

V. Theory

Unit I

Characterization of distribution of insects- Indices of Dispersion, Taylor's Power law. Island Biogeography. Population dynamics- Life tables, Leslie Matrix, Stable age distribution, Population projections. Predator-Prey Models- Lotka-Volterra and Nicholson-Bailey Model. Crop Modeling- an introduction.

Unit II

Insect Plant Interactions. Fig-figwasp mutualism and a quantitative view of types of associations. Role of insects in the environment. Adaptations to terrestrial habitats. Evolution of insect diversity and role of phytophagy as an adaptive zone for increased diversity of insects. Evolution of resource harvesting organs, resilience of insect taxa and the sustenance of insect diversity- role of plants. Herbivory, pollination, predation, parasitism. Modes of insect-plant interaction, tri-trophic interactions. Evolution of herbivory, monophagy vs polyphagy. Role of plant secondary metabolites. Meaning of stress- plant stress and herbivory. Consequences of herbivory to plant fitness and response to stress. Constitutive and induced plant defenses. Host seeking behavior of parasitoids.

Unit III

Biodiversity and Conservation- RET species, Ecological Indicators. Principles of Population genetics, Hardy Weinberg Law, Computation of Allelic and Phenotypic frequencies, Fitness under selection, Rates of Evolution under selection. Foraging Ecology- Optimal foraging theory, Marginal Value Theorem, and Patch departure rules, central place foraging, Mean-variance relationship and foraging by pollinators, Nutritional Ecology.

Unit IV

Reproductive ecology- Sexual selection, Mating systems, Reproductive strategies – timing, egg number, reproductive effort, sibling rivalry and parent-offspring conflict. Agro-ecological vs Natural Ecosystems – Characterisation, Pest Control as applied ecology- case studies.

VI. Practical

Methods of data collection under field conditions; Assessment of distribution parameters, Taylor's power law, Iwao's patchiness index, Index of Dispersion, etc.; Calculation of sample sizes by different methods; Fitting Poisson and Negative Binomial distributions and working out the data transformation methods; Hardy-Weinberg Law, Computation of Allelic and Phenotypic Frequencies – Calculation of changes under selection, Demonstration of genetic drift; Assessment of Patch Departure rules. Assessment of Resource size by female insects using a suitable insect model, fruit flies/ *Goniozus*/ Female Bruchids, etc.; A test of reproductive effort and fitness; Construction of Lifetables and application of Leslie Matrix–population projections, Stable age distribution; Exercises in development of Algorithms for crop modeling;

VII. Learning outcome

The scholar is expected to develop expertise in methods of data collection for insect population studies, data transformation for analyses, diversity estimates, assessing distribution parameters, study the impact of abiotic and biotic factors on the distribution and abundance of insects.

Should gain significant knowledge on construction of life tables and their analyses, assessment of resource size by female insects, reproductive effort and fitness.

I. Course Title : Insect Behaviour

II. Course Code : ENT 604

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To acquaint the students with a thorough understanding of how natural selection has led to various survival strategies manifested as behavior in insects.

V. Theory

Unit I

Defining Behaviour- Concept of umwelt, instinct, fixed action patterns, imprinting, complex behavior, inducted behavior, learnt behavior and motivation. History of Ethology- development of behaviorism and ethology, contribution of Darwin, Frisch, Tinbergen and Lorenz; Studying behavior- Proximate and Ultimate approaches, behavioural traits under natural selection, genetic control of behavior and behavioural polymorphism.

Unit II

Orientation- Forms of primary and secondary orientation including taxes and kinesis; Communication- primary and secondary orientation, responses to environmental stimuli, role of visual, olfactory and auditory signals in inter- and intra-specific communication, use of signals in defense, mimicry,

polyphenism; evolution of signals.

Unit III

Reproductive behavior- mate finding, courtship, territoriality, parental care, parental investment, sexual selection and evolution of sex ratios; Social behavior- kin selection, parental manipulation and mutualism; Self organization and insect behavior.

Unit IV

Foraging- Role of different signals in host searching (plant and insects) and host acceptance, ovipositional behavior, pollination behavior, co-evolution of plants and insect pollinators. Behaviour in IPM- Concept of super-normal stimuli and behavioural manipulation as potential tool in pest management, use of semio- chemicals, auditory stimuli and visual signals in pest management.

VI. Practical

Quantitative methods in sampling behavior; Training bees to artificial feeders; Sensory adaptation and habituation in a fly or butterfly model, physical cues used in host selection in a phytophagous insect, chemical and odour cues in host selection in phytophagous insect (DBM or gram pod borer), colour discrimination in honey bee or butterfly model, learning and memory in bees, role of self-organization in resource tracking by honeybees; Evaluation of different types of traps against fruit flies with respect to signals; Use of honey bees */Helicoverpa armigera* to understand behavioural polymorphism with respect to learning and response to pheromone mixtures, respectively.

VII. Learning outcome

Scholars are expected to be well versed with the behavior and orientation of insects towards exploitation as a tool in IPM.

I. Course Title : Bio-inputs for Pest Management

II. Course Code : ENT 605

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To appraise the students with advanced techniques in handling of different bio- agents, modern methods of biological control and scope in cropping system-based pest management in agro-ecosystems.

V. Theory

Unit I

Scope of classical biological control and augmentative bio-control; introduction and handling of natural enemies; nutrition of entomophagous insects and their hosts.

Unit II

Bio-inputs: mass production of bio-pesticides, mass culturing techniques of bio- agents, insectary facilities and equipments, basic standards of insectary, viable mass-production unit, designs, precautions, good insectary practices.

Unit III

Colonization, techniques of release of natural enemies, recovery evaluation, conservation and augmentation of natural enemies, survivorship analysis and ecological manipulations, large-scale production of bio-control agents. Scope of endophytes and endosymbionts in microbial pest management

Unit IV

Scope of genetically engineered microbes and parasitoids in biological control, genetics of ideal traits in bio-control agents for introgressing and for progeny selections, breeding techniques of bio-control agents.

VI. Practical

Mass rearing and release of some commonly occurring indigenous natural enemies

es; Assessment of role of natural enemies in reducing pest populations; Testing side effects of pesticides on natural enemies; Effect of semiochemicals on natural enemies, breeding of various bio-control agents, performance of efficiency analyses on target pests; Project document preparation for establishing a viable mass-production unit/ insectary; Working out feeding potential of predators. Visit to industrial biopesticide production units

VII. Learning outcome

Scholars are expected to learn the mass multiplication techniques of the more common and economically feasible natural enemies to be exploited under IPM programmes.

They should be able to guide entrepreneurs for establishing a viable mass- production unit/insectary.

I. Course Title : Insecticide Toxicology and Residues

II. Course Code : ENT 606

III. Credit Hours : 3 (2+1)

IV. Aim of the course

To acquaint the students with the latest advancements in the field of insecticide toxicology, biochemical and physiological target sites of insecticides, and pesticide resistance mechanisms in insects.

V. Theory

Unit I

Penetration and distribution of insecticides in insect systems; insecticide selectivity; factors affecting toxicity of insecticides. Modes of action of newer insecticide molecules; developments in bio-rational approaches; SPLAT; RNAi technology for pest management.

Unit II

Biochemical and physiological target sites of insecticides in insects; developments in biorationals, biopesticides and newer molecules; their modes of action and structural – activity relationships; advances in metabolism of insecticides.

Unit III

Joint action of insecticides; activation, synergism and potentiation.

Unit IV

Problems associated with pesticide use in agriculture: pesticide resistance; resistance mechanisms and resistant management strategies; pest resurgence and outbreaks; persistence and pollution; health hazards and other side effects.

Unit V

Estimation of insecticidal residues- sampling, extraction, clean-up and estimation by various methods; quantification and Confirmation of pesticide residues; maximum residue limits (MRLs) and their fixation; bound and conjugated residues, effect on soil fertility; insecticide laws and standards, and good agricultural practices.

VI. Practical

Residue sampling, extraction, clean-up and estimation of insecticide residues by various methods; Calculations and interpretation of data; Biochemical and biological techniques for detection of insecticide resistance in insects; Preparation of EC formulation using neem oil.

VII. Learning outcome

Scholars are expected to be well versed with the latest technologies of bioassays, insecticide/ pesticide residue analysis and solving problems associated with insect resistance to insecticides.

I. Course Title : Plant Resistance to Insects

II. Course Code : ENT 607

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To familiarize the students with recent advances in resistance of plants to insects and acquaint with the techniques for assessment and evaluation of resistance in crop plants.

V. Theory

Unit I

Importance of plant resistance, historical perspective, desirable morphological, anatomical and biochemical adaptations of resistance; assembly of plant species – gene pool; insect sources – behaviour in relation to host plant factors.

Unit II

Physical and chemical environment conferring resistance in plants, role of trypsin inhibitors and protease inhibitors in plant resistance; biochemistry of induced resistance – signal transduction pathways, methyl jasmonate pathways, polyphenol oxidase pathways, salicylic acid pathways; effects of induced resistance; exogenous application of elicitors.

Unit III

Biotechnological approaches in host plant resistance- genetic manipulation of secondary plant substances; incorporation of resistant gene in crop varieties; marker- aided selection in resistance breeding.

Unit IV

Estimation of plant resistance based on plant damage- screening and damage rating; evaluation based on insect responses; techniques and determination of categories of plant resistance; breakdown of resistance in crop varieties.

VI. Practical

Understanding mechanisms of resistance for orientation, feeding, oviposition, etc., allelochemical bases of insect resistance; Macroculturing of test insects like aphids, leaf/ plant hoppers, mites and stored grain pests; Field screening- microplot techniques, infester row technique, spreader row technique and plant nurseries; Determination of anti xenosis index, antibiosis index, tolerance index, plant resistance index.

VII. Learning outcome

Scholars are expected to identify sources of resistance in different crops and varieties; their utilization in resistance breeding programmes involving screening techniques for specific pests.

VIII. Suggested Reading

I. Course Title : Acarology

II. Course Code : ENT 608

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To acquire a good working knowledge of identification of economically important groups of mites up to the species level, a detailed understanding of the newer acaricide molecules and utilization of predators.

V. Theory

Unit I

Comparative morphology of Acari, phylogeny of higher categories in mites, knowledge of commonly occurring orders and families of Acari in India. Diagnostic characteristics of commonly occurring species from families Tetranychidae, Tenuipalpidae, Eriophyidae, Tarsonemidae, Phytoseiidae, Bdellidae, Cunaxidae, Stigmaeidae, Pymotidae, Cheyletidae, Acaridae, Pyroglyphidae, Orthogalumnae, Argasidae, Ixodidae, Sarcoptidae. Soil mites in India.

Unit II

Management of economical important species of mites in agriculture, veterinary and public health; storage acarology.

Unit III

Mites as vectors of plant pathogens; mode of action, structure-activity relationships of different groups of acaricides; problem of pesticide resistance in mites, resurgence of mites.

Unit IV

Predatory mites, their mass production and utilization in managing mite pests, acaropathogenic fungi- identification, isolation and utilization.

VI. Practical

Identification of commonly occurring mites up to species, preparation of

keys for identification; Collection of specific groups of mites and preparing the identification keys; Rearing phytoseiid mites and studying the suppression of spider mites; Management of mite pests of crops using acaricides, phytoseiid predators, fungal pathogens etc.

VII. Learning outcome

Scholars should be able to identify major mite pests, their management and predatory mites that can be used in biological control.

They are also expected to learn the rearing techniques of predatory Phytoseiid mites.

VIII. Suggested Reading

I. Course Title : Molecular Entomology

II. Course Code : ENT 609

III. Credit Hours : 2 (1+1)

IV. Aim of the course

To familiarize the students with DNA recombinant technology, marker genes, transgenic plants, and biotechnological advances in sericulture and apiculture.

V. Theory

Unit I

Introduction to molecular biology; techniques used in molecular biology.

Unit II

DNA and RNA structure- transcription and translation mechanisms. DNA recombinant technology, identification of genes/ nucleotide sequences for characters of interest. Genes of interest in entomological research- marker genes for sex identification, neuropeptides, JH esterase, St toxins and venoms, chitinase, CPTI; lectins and proteases.

Unit III

Transgenic plants for pest resistance and diseases. introduction of genes for pest

suppression Resistance management strategies in transgenic crops.. Molecular biology of baculoviruses, genetic engineering in baculoviruses Bt and entomopathogenic fungi

Unit IV

Insect gene transformation; biotechnology in relation to silkworms and honey bees; Genetic improvement of natural enemies. Cell lines; Sf transgenic technology and implications

Unit V

Insect immune systems in comparison to vertebrates; molecular basis of metamorphosis; Molecular basis of insecticide resistance. DNA-based diagnostics :DNA finger printing for taxonomy and phylogeny.

VI. Practical

Isolation of DNA/RNA; Purity determinations, purification of total DNA from animal tissues; Base pair estimation; Agarose gelelectrophoresis; Quantitative enzyme profile of alimentary canal; Restriction mapping of DNA; Demonstration of PCR, RFLP and RAPD techniques.

VII. Learning outcome

The scholars are expected to have mastered the molecular techniques applicable in entomological research like isolation of insect DNA, purification, DNA barcoding and utilizing these techniques in molecular systematics and biological control aspects.

I. Course Title : Integrated Pest Management

II. Course Code : ENT610

III. Credit Hours : 2 (2+0)

IV. Aim of the course

To acquaint the students with recent concepts of integrated pest management; surveillance and data base management; successful national and international case histories of integrated pest management, non-conventional tools in pest management.

V. Theory

Unit I

Principles of sampling and surveillance, database management and computer programming; simulation techniques, system analysis and modeling.

Unit II

Study of case histories of national and international programmes, their implementation, adoption and criticism; global trade and risk of invasive pests; updating knowledge on insect outbreaks and their management.

Unit III

Genetic engineering and new technologies- their progress and limitations in IPM programmes, deployment of benevolent alien genes for pest management- case studies; scope and limitations of bio-intensive and ecological based IPM programmes; application of IPM to farmers' real time situation.

Unit IV

Challenges, needs and future outlook; dynamism of IPM under changing cropping systems and climate; insect pest management under protected cultivation; strategies for pesticide resistance management.

VI. Learning outcome

Having gained sufficient experience in advanced studies of IPM the scholars should be able to independently frame IPM schedules for major crops/ cropping ecosystems (cereal/ pulse crop/ oilseed crop based/ vegetable crop based agro-ecosystems).

*Core Courses for Master's

- I. **Course Title** : Mycology
II. **Course Code** : PL PATH 501
III. **Credit Hours** : 2+1

IV. **Aim of the course**

To study the nomenclature, classification and characters of fungi.

V. **Theory**

Unit I

Introduction, definition of different terms, basic concepts. Importance of mycology in agriculture, relation of fungi to human affairs. History of mycology. Importance of culture collection and herbarium of fungi. Somatic characters and reproduction in fungi. Modern concept of nomenclature and classification, Classification of kingdom fungi: Stramenopila and Protists.

Unit II

The general characteristics of protists and life cycle in the Phyla Plasmodiophoromycota, Dictyosteliomycota, Acrasiomycota and Myxomycota. Kingdom Stramenopila: characters and life cycles of respective genera under Hypochytriomycota, Oomycota and Labyrinthulomycota.

Unit III

Kingdom fungi: General characters, ultrastructure and life cycle patterns in representative genera under Chytridiomycota, Zygomycota, Ascomycota; Archiascomycetes, Ascomycetous yeasts, Pyrenomycetes, Plectomycetes, Discomycetes, Loculoascomycetes, Erysiphales and anamorphs of ascomycetous fungi.

Unit IV

Basidiomycota; general characters, mode of reproduction, types of basidiocarps and economic importance of Hymenomycetes. Uridinales and Ustilaginales; variability, host specificity and life cycle pattern in rusts and smuts. Mitosporic fungi; status of asexual fungi, their teliomorphic relationships, Molecular characterization of plant pathogenic fungi.

VI. **Practical**

- Detailed comparative study of different groups of fungi;
- Collection of cultures and live specimens;
- Saccardoan classification and classification based on conidiogenesis;
- Vegetative structures and different types of fruiting bodies produced by slime molds, stramenopiles and true fungi;

- Myxomycotina: Fructification, plasmodiocarp, sporangia, plasmodium and aethalia. Oomycota;
- Somatic and reproductory structures of *Pythium*, *Phytophthora*, downy mildews and *Albugo*, Zygomycetes: Sexual and asexual structures of *Mucor*, *Rhizopus*, General characters of VAM fungi. Ascomycetes; fruiting structures, Erysiphales, and Eurotiales;
- General identification characters of Pyrenomycetes, Discomycetes, Loculo-ascomycetes and Laboulbenio-mycetes, Basidiomycetes; characters, ultrastructures and life cycle patterns in Ustilaginomycetes and Teliomycetes, Deuteromycetes;
- Characters of Hyphomycetes and Coelomycetes and their teliomorphic and anamorphic states, Collection, preservation, culturing and identification of plant parasitic fungi;
- Application of molecular approaches and techniques for identification of fungal pathogens.

VII. Suggested Reading

I. **Course Title** : Plant Virology

II. **Course Code** : PL PATH 502

III. **Credit Hours** : 2+1

IV. **Aim of the course**

To acquaint with the structure, virus- vector relationship, biology and management of plant viruses.

V. **Theory**

Unit I

History and economic significances of plant viruses. General and

morphological characters, composition and structure of viruses. Myco-viruses, arbo and baculo viruses, satellite viruses, satellite RNAs, phages, viroids and prions. Origin and evolution of viruses and their nomenclature and classification.

Unit II

Genome organization, replication in selected groups of plant viruses and their movement in host. Response of the host to virus infection: biochemical, physiological, and symptomatic changes. Transmission of viruses and virus-vector relationship. Isolation and purification of viruses.

Unit III

Detection and identification of plant viruses by using protein and nucleic acid based diagnostic techniques. Natural (R-genes) and engineering resistance to plant viruses.

Unit IV

Virus epidemiology and ecology (spread of plant viruses in fields, host range and survival). Management of diseases caused by plant viruses.

VI. Practical

- Study of symptoms caused by plant viruses (followed by field visit);
- Isolation and biological purification of plant virus cultures;
- Bioassay of virus cultures on indicator plants and host differentials;
- Transmission of plant viruses (Mechanical, graft and vector and study of disease development);
- Plant virus purification (clarification, concentration, centrifugation, high resolution separation and analysis of virions), Electron microscopy for studying viral particle morphology;
- Antisera production, Detection and diagnosis of plant viruses with serological (ELISA), nucleic acid (Non-PCR–LAMP, Later flow micro array and PCR based techniques);
- Exposure to basic bio-informatic tools for viral genome analysis and their utilization in developing detection protocols and population studies (BLASTn tool, Primer designing software, Bioedit tool, Clustal X/W, MEGA Software).

VII. Suggested Reading

I. **Course Title : Plant Pathogenic Prokaryotes**

II. **Course Code : PL PATH 503**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

To acquaint with plant pathogenic prokaryote (prokarya) and their structure, nutritional requirements, survival and dissemination.

V. **Theory**

Unit I

Prokaryotic cell: History and development of Plant bacteriology, history of plant bacteriology in India. Evolution of prokaryotic life, Prokaryotic cytoskeletal proteins. Structure of bacterial cell. Structure and composition of gram negative and gram positive cell wall; synthesis of peptidoglycan; Surface proteins; Lipopolysaccharide structure; Membrane transport; fimbriae and pili (Type IV pili); Mechanism of flagellar rotatory motor and locomotion, and bacterial movement; Glycocalyx (S- layer; capsule); the bacterial chromosomes and plasmids; Operon and other structures in cytoplasm; Morphological feature of fastidious bacteria, spiroplasmas and Phytoplasmas.

Unit II

Growth and nutritional requirements. Infection mechanism, role of virulence factors in expression of symptoms. Survival and dispersal of phytopathogenic prokaryotes.

Unit III

Taxonomy of phytopathogenic prokarya: Taxonomic ranks hierarchy; Identification, Classification and nomenclature of bacteria, phytoplasma and spiroplasma. The codes of Nomenclature and characteristics. Biochemical and molecular characterization of phytopathogenic prokaryotes.

Unit IV

Variability among phytopathogenic prokarya: general mechanism of variability (mutation); specialized mechanisms of variability (sexual like process in

bacteria- conjugation; transformation; transduction); and horizontal gene transfer.

Unit V

Bacteriophages, L form of bacteria, plasmids and bdellovibrios: Structure; Infection of host cells; phage multiplication cycle; Classification of phages, Use of phages in plant pathology/ bacteriology, Lysogenic conversion; H Plasmids and their types, plasmid borne phenotypes. Introduction to bacteriocins. Strategies for management of diseases caused by phytopathogenic prokaryotes.

VI. Practical

- Study of symptoms produced by phytopathogenic prokaryotes;
- Isolation, enumeration, purification, identification and host inoculation of phytopathogenic bacteria;
- Stains and staining methods;
- Biochemical and serological characterization;
- Isolation of genomic DNA plasmid;
- Use of antibacterial chemicals/ antibiotics;
- Isolation of fluorescent *Pseudomonas*;
- Preservation of bacterial cultures;
- Identification of prokaryotic organisms by using 16S rDNA, and other gene sequences;
- Diagnosis and management of important diseases caused by bacteria and mollicutes.

VII. Suggested Reading

- I. **Course Title** : **Plant Nematology**
- II. **Course Code** : **PL PATH 504**
- III. **Credit Hours** : **2+1**

IV. Aim of the course

To project the importance of nematodes in agriculture and impart basic knowledge on all aspects of plant nematology.

V. Theory

Unit I

Characteristics of Phylum Nematoda and its relationship with other related phyla, history and growth of Nematology; nematode habitats and diversity-plant, animal and human parasites; useful nematodes; economic importance of nematodes to agriculture, horticulture and forestry.

Unit II

Gross morphology of plant parasitic nematodes; broad classification, nematode biology, physiology and ecology.

Unit III

Types of parasitism; nature of damage and general symptomatology; interaction of plant-parasitic nematodes with other organisms.

Unit IV

Plant nematode relationships, cellular responses to infection by important phytonematodes; physiological specialization among phytonematodes.

Unit V

Principles and practices of nematode management; integrated nematode management.

Unit VI

Emerging nematode problems, Importance of nematodes in international trade and quarantine.

VI. Practical

- Studies on kinds of nematodes- free-living, animal, insect and plant parasites;
- Nematode extraction from soil;
- Extraction of migratory endoparasites, staining for sedentary endoparasites;
- Examination of different life stages of important plant parasitic nematodes, their symptoms and histopathology.

VII. Suggested Reading

I. **Course Title : Principles of Plant Pathology**

II. **Course Code : PL PATH 505**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

To introduce the subject of Plant Pathology, its concepts and principles.

V. **Theory Unit I**

Importance, definitions and concepts of plant diseases, history and growth of plant pathology, biotic and abiotic causes of plant diseases.

Unit II

Growth, reproduction, survival and dispersal of important plant pathogens, role of environment and host nutrition on disease development.

Unit III

Host parasite interaction, recognition concept and infection, symptomatology, disease development- role of enzymes, toxins, growth regulators; defense strategies- oxidative burst; Phenolics, Phytoalexins, PR proteins, Elicitors. Altered plant metabolism as affected by plant pathogens.

Unit IV

Genetics of resistance; 'R' genes; mechanism of genetic variation in pathogens; molecular basis for resistance; marker-assisted selection; genetic engineering for disease resistance.

VI. **Practical**

- Basic plant pathological techniques;
- Isolation, inoculation and purification of plant pathogens and proving Koch's postulates;

- Techniques to study variability in different plant pathogens;
- Purification of enzymes, toxins and their bioassay;
- Estimation of growth regulators, phenols, phytoalexins in resistant and susceptible plants.

VII. Suggested Reading

I. **Course Title : Techniques for Detection and Diagnosis of Plant Diseases**

II. **Course Code : PL PATH 506**

III. **Credit Hours : 0+2**

IV. **Aim of the course**

To impart training on various methods/ techniques/ instruments used in the study of plant diseases/ pathogens.

V. **Practical**

- Detection of plant pathogens 1. Based on visual symptoms, 2. Biochemical test 3.
- Using microscopic techniques, 4. Cultural studies; (use of selective media to isolate pathogens). 5. Biological assays (indicator hosts, differential hosts) 6. Serological assays 7. Nucleic acid based techniques (Non-PCR–LAMP, Later flow microarray and PCR based- multiplex, nested, qPCR, immune capture PCR, etc.);
- Phenotypic and genotypic tests for identification of plant pathogens;
- Molecular identification (16S rDNA and 16s-23S rDNA intergenic spacer region sequences-prokaryotic organisms; and eukaryotic organism by ITS region) and whole genome sequencing;

- Volatile compounds profiling by using GC-MS and LC-MS;
- FAME analysis, Fluorescence *in-situ* Hybridization (FISH), Flow Cytometry, Phage display technique, biosensors for detection of plant pathogens;
- Genotypic tools such as genome/ specific gene sequence homology comparison by BLAST (NCBI and EMBL) and electron microscopy techniques of plant virus detection and diagnosis.

I. **Course Title : Principles of Plant Disease Management**

II. **Course Code : PL PATH 507**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

To acquaint with different strategies for management of plant diseases.

V. **Theory**

Unit I

Principles of plant disease management by cultural, physical, biological, chemical, organic amendments and botanicals methods of plant disease control, integrated control measures of plant diseases. Disease resistance and molecular approach for disease management.

Unit II

History of fungicides, bactericides, antibiotics, concepts of pathogen, immobilization, chemical protection and chemotherapy, nature, properties and mode of action of antifungal, antibacterial and antiviral chemicals. Label claim of fungicides.

Unit III

Application of chemicals on foliage, seed and soil, role of stickers, spreaders and other adjuvants, health *vis-a-vis* environmental hazards, residual effects and safety measures

VI. **Practical**

- Phytopathometry;
- Methods of *in-vitro* evaluation of chemicals, antibiotics, bio agents against plant pathogens;
- Field evaluation of chemicals, antibiotics, bio agents against plant pathogens;
- Soil solarisation, methods of soil fumigation under protected cultivation;
- Methods of application of chemicals and bio control agents;
- ED and MIC values, study of structural details of sprayers and dusters;
- Artificial epiphytotic and screening of resistance.

-

I. **Course Title : Epidemiology and Forecasting of Plant Diseases**

II. **Course Code : PL PATH 508**

III. **Credit Hours : 1+0**

IV. **Aim of the course**

To acquaint with the principles of epidemiology and its application in disease forecasting.

V. **Theory**

Unit I

Epidemic concepts, simple interest and compound interest disease, historical development. Elements of epidemics and their interaction. Structures and patterns of epidemics. Modelling, system approaches and expert systems in plant pathology.

Unit II

Genetics of epidemics. Models for development of plant disease epidemics. Common and natural logarithms, function fitting, area under disease progress curve and correction factors, inoculum dynamics. Population biology of pathogens, temporal and spatial variability in plant pathogens.

Unit III

Epidemiological basis of disease management. Survey, surveillance and vigilance. Remote sensing techniques and image analysis. Crop loss assessment.

Unit IV

Principles and pre-requisites of forecasting, systems and factors affecting various components of forecasting, some early forecasting and procedures based on weather and inoculum potential, modelling disease growth and disease prediction. Salient features of important forecasting models.

I. **Course Title : Disease Resistance in Plants**

II. **Course Code : PL PATH 509**

III. **Credit Hours : 2+0**

IV. **Aim of the course**

To acquaint with the disease resistance mechanisms.

V. **Theory**

Unit I

Introduction and historical development, dynamics of pathogenicity, process of infection, variability in plant pathogens, gene centres as sources of resistance, disease resistance terminologies. Disease escape, non-host resistance and disease tolerance.

Unit II

Genetic basis of disease resistance, types of resistance, identification of physiological races of pathogen, disease progression in relation to resistance, stabilizing selection pressure in plant pathogens.

Unit III

Host defence system, morphological and anatomical resistance, pre-formed chemicals in host defence, post infectious chemicals in host defence, phytoalexins, hypersensitivity and its mechanisms. Genetic basis of relationships between pathogen and host, Gene-for-gene concept, protein-for-protein and immunization basis, management of resistance genes. Strategies for gene deployment.

I. **Course Title : Ecology of Soil Borne Plant Pathogens**

II. **Course Code : PL PATH 510**

III. **Credit Hours : 1+1**

IV. **Aim of the course**

To provide knowledge on soil-plant disease relationship.

V. Theory

Unit I

Soil as an environment for plant pathogens, nature and importance of rhizosphere and rhizoplane, host exudates, soil and root inhabiting fungi. Interaction of microorganisms.

Unit II

Types of biocontrol agents. Inoculum potential and density in relation to host and soil variables, competition, predation, antibiosis and fungistasis. Conducive and suppressive soils.

Unit III

Biological control- concepts and potentialities for managing soil borne pathogens. Potential of *Trichoderma* and fluorescent *Pseudomonas* in managing plant diseases.

VI. Practical

- Quantification of rhizosphere and rhizoplane microflora with special emphasis on pathogens;
- Pathogenicity test by soil and root inoculation techniques, correlation between inoculum density of test pathogens and disease incidence, demonstration of fungistasis in natural soils;
- Suppression of test soil-borne pathogens by antagonistic microorganisms;
- Isolation and identification of different biocontrol agents;
- Study of various plant morphological structures associated with resistance, testing the effect of root exudates and extracts on spore germination and growth of plant pathogens;
- Estimating the phenolic substances, total reducing sugars in susceptible and resistant plants;
- Estimating the rhizosphere and root tissue population of microorganisms (pathogens) in plants.

VII. Suggested Reading

I.	Course Title	: Chemicals and Botanicals in Plant Disease Management
II.	Course Code	: PL PATH 511
III.	Credit Hours	: 2+1
IV.	Aim of the course	

To provide knowledge on the concepts, principles and judicious use of chemicals and botanicals in plant disease management.

V. Theory

Unit I

History and development of chemicals; definition of pesticides and related terms; advantages and disadvantages of chemicals and botanicals.

Unit II

Classification of chemicals used in plant disease management and their characteristics.

Unit III

Chemicals in plant disease control, viz., fungicides, bactericides, nematocides, antiviral chemicals and botanicals. Issues related to label claim.

Unit IV

Formulations, mode of action and application of different fungicides; chemotherapy and phytotoxicity of fungicides.

Unit V

Handling, storage and precautions to be taken while using fungicides; compatibility with other agrochemicals, persistence, cost-benefit ratio, factors affecting fungicides. New generation fungicides and composite formulations of pesticides.

Unit VI

Efficacy of different botanicals used and their mode of action. Important botanicals used against diseases. General account of plant protection appliances; environmental pollution, residues and health hazards, fungicidal resistance in plant pathogens and its management.

VI. Practicals

- Acquaintance with formulation of different fungicides and plant protection appliances;
- Formulation of fungicides, bactericides and nematocides;
- *In-vitro* evaluation techniques, preparation of different concentrations of chemicals including botanical pesticides against pathogens;
- Persistence, compatibility with other agro-chemicals;
- Detection of naturally occurring fungicide resistant mutants of pathogen;
- Methods of application of chemicals.

VII. Suggested Reading

I. **Course Title** : **Detection and Management of Seed Borne Pathogens**

II. **Course Code** : **PL PATH 512**

III. **Credit Hours** : **2+1**

IV. **Aim of the course**

To acquaint with seed-borne diseases, their nature, detection, transmission, epidemiology, impacts/ losses and management.

V. Theory

Unit I

History and economic importance of seed pathology in seed industry, plant quarantine and SPS under WTO. Morphology and anatomy of typical monocotyledonous and dicotyledonous infected seeds.

Unit II

Recent advances in the establishment and subsequent cause of disease development in seed and seedling. Localization and mechanism of seed transmission in relation to seed infection, seed to plant transmission of pathogens.

Unit III

Seed certification and tolerance limits, types of losses caused by seed-borne diseases in true and vegetatively propagated seeds, evolutionary adaptations of crop plants to defend seed invasion by seed-borne pathogens. Epidemiological factors influencing the transmission of seed-borne diseases, forecasting of epidemics through seed-borne infection.

Unit IV

Production of toxic metabolites affecting seed quality and its impact on human, animal and plant health, management of seed-borne pathogens/ diseases and

procedure for healthy seed production. Seed health testing, methods for detecting microorganism.

VI. Practical

- Conventional and advanced techniques in the detection and identification of seed-borne fungi, bacteria and viruses;
- Relationship between seed-borne infection and expression of the disease in the field.

VII. Suggested Reading

- Agarwal VK and Sinclair JB. 1993. *Principles of Seed Pathology*. Vols. I & II, CBS Publ., New Delhi.
- Hutchins JD and Reeves JE. (Eds.). 1997. *Seed Health Testing: Progress Towards the 21st Century*. CABI, Wallington.
- Paul Neergaard. 1988. *Seed Pathology*. McMillan, London.
- Suryanarayana D. 1978. *Seed Pathology*. Vikash Publ., New Delhi.

I. Course Title : Biological Control of Plant Pathogens

II. Course Code : PL PATH 513

III. Credit Hours : 1+1

IV. Aim of the course

To study principles and application of ecofriendly and sustainable management strategies of plant diseases.

V. Theory Unit I

Concept of biological control, definitions, importance, principles of plant disease management with bioagents, history of biological control, merits and demerits of biological control.

Unit II

Types of biological interactions, competition: mycoparasitism, exploitation for

hypovirulence, rhizosphere colonization, competitive saprophytic ability, antibiosis, induced resistance, mycorrhizal associations, operational mechanisms and its relevance in biological control.

Unit III

Factors governing biological control, role of physical environment, agroecosystem, operational mechanisms and cultural practices in biological control of pathogens, pathogens and antagonists and their relationship, biocontrol agents, comparative approaches to biological control of plant

pathogens by resident and introduced antagonists, control of soil-borne and foliar diseases. Compatibility of bioagents with agrochemicals and other antagonistic microbes.

Unit IV

Commercial production of antagonists, their delivery systems, application and monitoring, biological control in IDM, IPM and organic farming system, biopesticides available in market. Quality control system of biocontrol agents.

VI. Practical

- Isolation, characterization and maintenance of antagonists, methods of study of antagonism and antibiosis, application of antagonists against pathogen *in-vitro and in vivo* conditions;
- Preparation of different formulations of selected bioagents and their mass production;
- Quality parameters of biocontrol agents;
- One week exposure visit to commercial biocontrol agents production unit.

VII. Suggested Reading

I. Course Title : Integrated Disease Management

II. Course Code : PL PATH 514

III. Credit Hours : 2+1

IV. Aim of the course

To emphasize the importance and the need of IDM in the management of diseases of important crops.

V. Theory Unit I

Introduction, definition, concept and tools of disease management, components

of integrated disease management- their limitations and implications.

Unit II

Development of IDM-basic principles, biological, chemical and cultural disease management.

Unit III

IDM in important crops- rice, wheat, cotton, sugarcane, chickpea, rapeseed and mustard, pearl millet, pulses, vegetable crops, fruit, plantation and spice crops.

VI. Practical

- Application of physical, biological and cultural methods;
- Use of chemical and biocontrol agents, their compatibility and integration in IDM. Demonstration of IDM and multiple disease management in crops of regional importance as project work.

VII. Suggested Reading

- Gupta VK and Sharma RC. (Eds). 1995. *Integrated Disease Management and Plant Health*. Scientific Publ., Jodhpur.

I. Course Title : Diseases of Field and Medicinal Crops

II. Course Code : PL PAT 515

III. Credit Hours : 2+1

IV. Theory

Unit I

Diseases of Cereal crops- Rice, wheat, barley, pearl millet, sorghum and maize.

Unit II

Diseases of Pulse crops- Gram, urdbean, mungbean, lentil, pigeonpea, soybean and cowpea.

Unit III

Diseases of Oilseed crops- Rapeseed and mustard, sesame, linseed, sunflower, groundnut, castor.

Unit IV

Diseases of Cash crops- Cotton, sugarcane.

Unit V

Diseases of Fodder legume crops- Berseem, oats, guar, lucerne.

Unit VI

Medicinal crops- *Plantago*, liquorice, mulathi, rosagrass, sacred basil, mentha, ashwagandha, *Aloe vera*.

v. Practical

- Detailed study of symptoms and host parasite relationship of important diseases of above mentioned crops;
- Collection and dry preservation of diseased specimens of important crops.

vi. Suggested Reading

I. **Course Title** : Diseases of Fruits, Plantation and Ornamental Crops

II. **Course Code** : PL PATH 516

III. **Credit Hours** : 2+1

IV. Aim of the course

To acquaint with diseases of fruits, plantation, ornamental plants and their management.

V. Theory

Unit I

Introduction, symptoms and etiology of different fruit diseases. Factors affecting disease development in fruits like apple, pear, peach, plum, apricot, cherry, walnut, almond, strawberry, citrus, mango, grapes, guava, ber, banana, pineapple, papaya, fig, pomegranate, date palm, custard apple and

their management.

Unit II

Symptoms, mode of perpetuation of diseases of plantation crops such as tea, coffee, rubber and coconut and their management.

Unit III

Symptoms and life cycle of pathogens. Factors affecting disease development of ornamental plants such as roses, gladiolus, tulip, carnation, gerbera orchids, marigold, chrysanthemum and their management.

VI. Practical

- Detailed study of symptoms and host parasite relationship of representative diseases of plantation crops;
- Collection and dry preservation of diseased specimens of important crops.

VII. Suggested Reading

- Gupta VK and Sharma SK. 2000. *Diseases of Fruit Crops*. Kalyani Publishers, New Delhi.

Walker JC. 2004. *Diseases of Vegetable Crops*. TTPP, India.

I. Course Title : Diseases of Vegetable and Spices Crops

II. Course Code : PL PATH 517

III. Credit Hours : 2+1

IV. Aim of the course

To impart knowledge about symptoms, epidemiology of different diseases of vegetables and spices and their management.

V. Theory

Unit I

Nature, prevalence, factors affecting disease development of tuber, bulb, leafy vegetable, crucifers, cucurbits and solanaceous vegetables. Diseases of crops underprotected cultivation.

Unit II

Symptoms and management of diseases of different root, tuber, bulb, leafy vegetables, crucifers, cucurbits and solanaceous vegetable crops.

Unit III

Symptoms, epidemiology and management of diseases of different spice crops such as black pepper, nutmeg, saffron, cumin, coriander, turmeric, fennel, fenugreek and ginger. Biotechnological approaches in developing disease resistant transgenics.

VI. Practical

- Detailed study of symptoms and host pathogen interaction of important diseases of vegetable and spice crops.

VII. Suggested Reading

- Chaube HS, Singh US, Mukhopadhyay AN and Kumar J. 1992. *Plant Diseases of International Importance*. Vol. II. *Diseases of Vegetable and Oilseed Crops*. Prentice Hall, Englewood Cliffs, New Jersey.

- Singh RS. 1999. *Diseases of Vegetable Crops*. Oxford & IBH, New Delhi. Walker JC. 1952. *Diseases of Vegetable Crops*. McGraw-Hill, New York.

I. Course Title : Post-Harvest Diseases

II. Course Code : PL PATH 518

III. Credit Hours : 1+1

IV. Aim of the course

To acquaint with the post-harvest diseases of agricultural produce and their eco-friendly management.

V. Theory

Unit I

Concept of post-harvest diseases, definitions, importance with reference to management and health, principles of plant disease management as pre-harvest and post-harvest, Types of post-harvest problems both by biotic and abiotic factors.

Unit II

Role of physical environment, agro-ecosystem leading to quiescent infection, operational mechanisms and cultural practices in perpetuation of pathogens,

pathogens and antagonist and their relationship, role of biocontrol agents and chemicals in controlling post-harvest diseases, comparative approaches to control of plant pathogens by resident and introduced antagonists.

Unit III

Integrated approaches in controlling diseases and improving the shelf life of produce using nutritional, bio-control agents and other agents, control of aflatoxigenic and mycotoxigenic fungi, application and monitoring for health hazards.

Unit IV

Study of symptoms, toxicosis of various pathogens, knowledge of Codex

Alimentarious for each product and commodity. Physical and biological agents/ practices responsible for development/ prevention of post-harvest diseases- traditional and improved practices.

VI. Practical

- Isolation, characterization and maintenance of post-harvest pathogens, application of antagonists against pathogens *in vivo* condition;
- Comparative efficacy of different fungicides and bioagents;
- Study of different post-harvest disease symptoms on cereals, pulses, oilseed, commercial crops, vegetables, fruits and flowers;
- Visit to cold storage.

VII. Suggested Reading

- Chaddha KL and Pareek OP. 1992. *Advances in Horticulture* Vol. IV, Malhotra Publ. House, New Delhi.
- Pathak VN. 1970. *Diseases of Fruit Crops and their Control*. IBH Publ., New Delhi.

I. Course Title : Plant Quarantine and Regulations

II. Course Code : PL PATH 519

III. Credit Hours : 1+0

IV. Aim of the course

To acquaint the learners about the principles and the role of plant quarantine in containment of pests and diseases, plant quarantine regulations and set-up.

V. Theory

Unit I

Historical development in plant quarantine, Definitions of pest, and transgenics as per Govt. notification; Organizational set up of plant quarantine in India. relative importance; quarantine – domestic and international. Quarantine restrictions in the movement of agricultural produce, seeds and planting material; case histories of exotic pests/ diseases and their status.

Unit II

Acts related to registration of pesticides and transgenics. History of quarantine legislations, Salient features of PQ Order 2003. Environmental Acts, Industrial registration; APEDA, Import and Export of bio-control agents.

Unit III

Identification of pest/ disease free areas; contamination of food with toxigens, microorganisms and their elimination; Symptomatic diagnosis and other techniques to detect pest/ pathogen infestations; VHT and other safer techniques of disinfestation/ salvaging of infected material.

Unit IV

WTO regulations; non-tariff barriers; Pest risk analysis, good laboratory practices for pesticide laboratories; pesticide industry; Sanitary and Phytosanitary measures. Visit to plant quarantine station and PEQ facilities.

VI. Suggested Reading

- Rajeev K and Mukherjee RC. 1996. *Role of Plant Quarantine in IPM*. Aditya Books.
- Rhower GG. 1991. Regulatory Plant Pest Management. In: *Handbook of Pest Management in Agriculture*. 2nd Ed. Vol. II. (Ed. David Pimental). CRC Press.

Course Title with Credit Load for Ph.D. in Plant Pathology

Course Code	Course Title	Credits Hours
PL PATH 601	Advances in Mycology	2+1
PL PATH 602	Advances in Virology	2+1
PL PATH 603	Advances in Plant Pathogenic Prokaryotes	2+1
PL PATH 604**	Molecular Basis of Host-pathogen Interaction	2+1
PL PATH 605	Principles and Procedures of Certification	1+0
PL PATH 606	Plant Biosecurity and Biosafety	2+0
PL PATH 691	Doctoral Seminar – I	0+ 1
PL PATH 692	Doctoral Seminar – II	0+ 1
PL PATH 699	Doctoral Research	75

**Core Courses for Doctoral Programme

- I. **Course Title** : **Advances in Mycology**
II. **Course Code** : **PL PATH 601**
III. **Credit Hours** : **2+1**
IV. **Aim of the course**
To acquaint with the advances in mycology
V. **Theory**

Unit I

General introduction, historical development and advances in mycology. Recent taxonomic criteria, morphological criteria for classification. Serological, chemical (chemotaxonomy), molecular and numerical (computer based assessment) taxonomy. Interaction between groups: Phylogeny, Micro conidiation, conidiogenesis and sporulating structures of fungi imperfecti.

Unit II

Population biology, pathogenic variability/ vegetative compatibility. Heterokaryosis and parasexual cycle. Sex hormones in fungi. Pleomorphism and speciation in fungi. Mechanism of nuclear inheritance. Mechanism of extra-nuclear inheritance. Biodegradation.

Unit III

Ultra structures and chemical constituents of fungal cells, functions of cell organelles. Mitosis, meiosis, gene action and regulation. Effects of fungal interaction with host plants and other microorganisms; parasitism, symbiosis and commensalism.

Unit IV

Genetic Improvement of Fungal strains. Fungal biotechnology. Fungi mediated synthesis of nano particles – characterization process and application. Mycotoxins problems and its management.

VI. Practical

- Isolation, purification and identification of cultures, spores and mating typedetermination;
- Study of conidiogenesis-Phialides, porospores, arthospores;
- Study of fruiting bodies in Ascomycotina;
- Identification of fungi up to species level;
- Study of hyphal anastomosis;
- Morphology of representative plant pathogenic genera form different groups of fungi;

- Molecular characterization of fungi.

VII. **Suggested Reading**

- Alexopoulos CJ, Mims CW and Blackwell M. 1996. *Introductory Mycology*. John Wiley & Sons, New York.
- Dube HC. 2005. *An Introduction to Fungi*. 3rd Ed. Vikas Publ. House, New Delhi.
- Kirk PM, Cannon PF, David JC and Stalpers JA. (Eds.). 2001. *Ainsworth and Bisby's Dictionary of Fungi*. 9th Ed., CABI, Wallington.
- Maheshwari R. 2016. *Fungi: Experimental Methods in Biology* 2nd edn. CRC Press, US.
- Ulloa M and Hanlin RT. 2000. *Illustrated Dictionary of Mycology*. APS, St. Paul, Minnesota. Webster J and Weber R. 2007. *Introduction to Fungi*. Cambridge University Press, Cambridge.

I. **Course Title : Advances in Plant Virology**

II. **Course Code : PL PATH 602**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

To educate about the advanced techniques and new developments in plant virology.

V. **Theory**

Unit I

Origin, evolution and interrelationship with animal viruses. Virus morphology, structure, architecture, replication (overview of host and viral components required), assembly and virus specific cytological effects in infected plant cells. Mechanisms leading to the evolution of new viruses/strains: mutation, recombination, pseudo- recombination, component re-assortment, etc.

Unit II

Major vector groups of plant viruses and their taxonomy, virus-vector relationship, molecular mechanism of virus transmission by vectors. Terminologies used in immunology and serology. Classification, structure and functions of various domains of Immunoglobulins. Production of Polyclonal and monoclonal antibodies for detection of viruses. Immuno/ serological assays (Slide agglutination tests, Test tube precipitation test, Double agar diffusion test, ELISA (DAC, DAS, TAS), Dot Immuno Binding Assay, and nucleic acid based assays for detection of plant viruses.

Unit III

Polymerase Chain Reaction based (PCR, reverse transcriptase PCR, multiplex PCR, Nested PCR, Real time/ q PCR) and non PCR based: LAMP, Fluorescent *in situ* hybridization (FISH), dot blot hybridization. Plant virus genome organization (General properties of plant viral genome- information content, coding and non- coding regions), replication, transcription and translational strategies of pararetroviruses, geminiviruses, tobamo-, poty-, bromo, cucumo, ilar, tospoviruses, satellite viruses and satellite RNA.

Unit IV

Gene expression, regulation and viral promoters. Genetic engineering with plant viruses, viral suppressors, RNAi dynamics and resistant genes. Virus potential as vectors, genetically engineered resistance, transgenic plants. Techniques and application of tissue culture for production of virus free planting materials. Phylogenetic grouping system based on partial/ complete sequences of virus genomes and using of next generation sequencing technology in plant virus discovery.

VI. Practical

- Purification of viruses, SDS-PAGE for molecular weight determination, production of polyclonal antiserum, purification of IgG and conjugate preparation;
- Acquaintance with different serological techniques (i) DAC- ELISA (ii) DAS-ELISA (iii) DIBA (iv) Western blots (v) (ab) 2-ELISA. Nucleic acid isolation, DOT-blot, southern hybridization, probe preparation, and autoradiography;
- PCR application and viral genome cloning of PCR products, plasmid purification, enzyme digestion, sequencing, annotation of genes, analysis of viral sequences (use of gene bank, blast of viral sequences and phylogeny);
- Bioinformatics analysis tools for virology (ORF finder, Gene mark, Gene ontology, BLAST, Clustal X/W, Tm pred and Phylogeny programs).

VII. Suggested Reading

- Pirone TP and Shaw JG. 1990. *Viral Genes and Plant Pathogenesis*. Springer Verlag, New York.
- Roger Hull. 2002. *Mathew's Plant Virology* (4th Ed.). Academic Press, New York. Thresh JM. 2006. *Advances in Virus Research*. Academic Press, New York.

- I. **Course Title : Advances in Plant Pathogenic Prokaryotes**
- II. **Course Code : PL PATH 603**
- III. **Credit Hours : 2+1**
- IV. **Aim of the course**

To learn about the latest developments in all the plant pathogenic prokaryotes as a whole.

V. Theory

Unit I

Prokaryotic cell: Molecular basis for origin and evolution of prokaryotic life, RNA world, prokaryotic cytoskeletal proteins. Flagella structure, assembly and regulation. Structure and composition (bacteria) cell wall/ envelop, Types of secretion systems (TI to TIV) and their molecular interaction, fimbriae and pili (Type IV pili), Bacterial chromosomes and plasmids, other cell organelles. Growth, nutrition and metabolism in prokaryotes (Embden-Meyerhof-Parnas (EMP) pathway, Phosphoketolase Pathway and Entner Doudoroff Pathway).

Unit II

Current trends in taxonomy and identification of phytopathogenic prokaryotes:

International code of nomenclature, Polyphasic approach, New/ special detection methods for identification of bacterial plant pathogens. Taxonomic ranks hierarchy; Identification, Advances in classification and nomenclature.

Unit III

Bacterial genetics: General mechanism of variability (mutation), specialized mechanisms of variability. Transposable genetic elements in bacteria-integron and prophages, Mechanism of gene transfer. Pathogenicity islands, horizontal gene transfer, Bacterial Pan-Genome.

Unit IV

Bacteriophages: Composition, structure and infection. Classification and use of phages in plant pathology/ bacteriology. Host pathogen interactions: Molecular mechanism of pathogenesis: Pathogenicity factors of soft rot, necrosis, wilt, canker, etc. Immunization, induced resistance/ Systemic Acquired Resistance, Quorum sensing. Bacterial pathogenicity and virulence: Molecular mechanism of virulence and pathogenesis, bacterial secretion systems, pathogenicity of bacterial enzymes that degrade the cell walls, Role of hrp/ hrc genes and TALE effectors. Synthesis and regulation of EPSs.

Unit V

Beneficial Prokaryotes-Endophytes, PGPR, Phylloplane bacteria and their role in disease management. Endosymbionts for host defence. Advances in management of diseases caused by prokaryotes: genetic engineering, RNA silencing; CRISPR cas9.

VI. Practical

- Pathogenic studies and race identification, plasmid profiling of bacteria, fatty acid profiling of bacteria, RFLP profiling of bacteria and variability status, Endospore, Flagella staining, Test for secondary metabolite production, cyanides, EPS, siderophore, specific detection of phytopathogenic bacteria using species/ pathovar specific primers;
- Basic techniques in diagnostic kit development, Molecular tools to identify phytoendosymbionts;
- Important and emerging diseases and their management strategies.

VII. Suggested Reading

- Dale JW and Simon P. 2004. *Molecular Genetics of Bacteria*. John Wiley & Sons, New York. Garrity GM, Krieg NR and Brenner DJ. 2006. *Bergey's Manual of Systematic Bacteriology: The Proteobacteria*. Vol. II. Springer Verlag, New York.
- Gnanamanickam SS. 2006. *Plant-Associated Bacteria*. Springer Verlag, New York.
- Mount MS and Lacy GH. 1982. *Plant Pathogenic Prokaryotes*. Vols. I, II. Academic Press, New York.
- Sigeo DC. 1993. *Bacterial Plant Pathology: Cell and Molecular Aspects*. Cambridge Univ. Press, Cambridge.
- Starr MP. 1992. *The Prokaryotes*. Vols. I–IV. Springer Verlag, New York.

I. **Course Title : Molecular Basis of Host-pathogen Interaction**

II. **Course Code : PL PATH 604**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

To understand the concepts of molecular biology and biotechnology in relation to host plant- pathogen interactions.

V. **Theory**

Unit I

History of host plant resistance and importance to Agriculture. Importance and role of biotechnological tools in plant pathology. Basic concepts and principles to study host pathogen relationship. Molecular genetics, imaging and analytical chemistry tools for studying plants, microbes, and their interactions.

Unit II

Different forms of plant-microbe interactions and nature of signals/ effectors underpinning these interactions. Plant innate immunity: PAMP/ DAMP. Molecular basis of host-pathogen interaction-fungi, bacteria, viruses and nematodes; recognition system, signal transduction.

Unit III

Induction of defence responses- HR, Programmed cell death, reactive oxygen species, systemic acquired resistance, induced systemic resistance, pathogenesis related proteins, phytoalexins and virus induced gene silencing. Molecular basis of gene-for-gene hypothesis; R-gene expression and transcription profiling, mapping and cloning of resistance genes and marker-aided selection, pyramiding of R genes. Gene for gene systems: Background, genetics, phenotypes, molecular mechanisms, races, breakdown of resistance (boom-and-bust cycles), Coevolution-arms race and trench warfare models, Metapopulations, cost of resistance, cost of unnecessary virulence, GFG in agricultural crops vs. natural populations, Durability of resistance, erosion of quantitative resistance.

Unit IV

Pathogen population genetics and durability, viruses vs cellular pathogens. Gene deployment, cultivar mixtures. Disease emergence, host specialization. Circadian clock genes in relation to innate immunity. Biotechnology and disease management; development of disease resistance plants using genetic engineering approaches, different methods of gene transfer, biosafety issues related to GM crops.

VI. Practical

- Protein, DNA and RNA isolation, plasmid extraction, PCR analysis, DNA and Protein electrophoresis, bacterial transformation;
- Gene mapping and marker assisted selection;
- Development and use of molecular markers in identification and characterization of resistance to plant pathogens and their management.

VII. Suggested Reading

- Stacey G and Keen TN. (Eds.). 1996. *Plant Microbe Interactions*. Vols. I-III. Chapman & Hall, New York; Vol. IV. APS Press, St. Paul, Minnesota.

I. Course Title : Principles and Procedures of Certification

II. Course Code : PL PATH 605

III. Credit Hours : (1+0)

IV. Aim of the course

To acquaint with the certification procedures of seed and planting material.

V. Theory

Unit I

Introduction to certification. International scenario of certification and role of ISTA, EPPO, OECD, etc. in certification and quality control. Case studies of certification systems of USA and Europe. National Regulatory mechanism and certification system including seed certification, minimum seed certification standards. National status of seed health in seed certification. Methods for testing genetic identity, physical purity, germination percentage, seed health, etc. Fixing tolerance limits for diseases and insect pests in certification and quality control programmes.

Unit II

Methods used in certification of seeds, vegetative propagules and *in-vitro* cultures. Accreditation of seed testing laboratories. Role of seed/ planting material health certification in national and international trade.

VI. Reference

I. **Course Title : Plant Biosecurity and Biosafety**

II. **Course Code : PL PATH 606**

III. **Credit Hours : 2+0**

IV. **Aim of the course**

To facilitate deeper understanding on plant biosecurity and biosafety issues in agriculture.

V. **Theory**

Unit I

History of biosecurity, Concept of biosecurity, Components of biosecurity, Quarantine, Invasive Alien Species, Biowarfare, Emerging/ resurgence of pests and diseases. Introduction and History of biosecurity and its importance.

Unit II

National Regulatory Mechanism and International Agreements/ Conventions, viz., Agreement on Application of Sanitary and Phytosanitary (SPS) Measures. World Trade Organization (WTO), Convention on Biological Diversity (CBD), International Standards for Phytosanitary Measures, pest risk analysis, risk assessment models, pest information system, early warning and forecasting system, use of Global Positioning System (GPS) and Geographic

Information System (GIS) for plant biosecurity, pest/ disease and epidemic management, strategies for combating risks and costs associated with agroterrorism event, mitigation planning, integrated approach for biosecurity.

Unit III

Biosafety, policies and regulatory mechanism, Cartagena Protocol on Biosafety and its implications, Issues related to release of genetically modified crops. Emerging/ resurgence of pests and diseases in the changing scenario of climatic conditions. Issues related to release of genetically modified crops.

NEMATOTOLOGY

Course Title with Credit Load for M.Sc. in Nematology

Course Code	Course Title	Credit Hours
NEMA 501*	Principles of Nematology	2+1
NEMA 502\$/ ENT 503	Principles of Taxonomy	2+0
NEMA 503*	Structural Organization of Nematodes	2+1
NEMA 504*	Nematode Systematics	2+1
NEMA 505*	Nematological Techniques	1+2
NEMA 506*	Nematode Diseases of Crops	2+1
NEMA 507	Nematode Biology and Physiology	2+1
NEMA 508	Nematode Ecology	2+1
NEMA 509	Nematode Interactions with Other Organisms	2+1
NEMA 510*	Nematode Management	2+1
Nema 511	Beneficial Nematodes	1+1
NEMA 512/ ENT 510\$	Principles of Integrated Pest Management	1+1
NEMA 513/ PL PATH 513@	Disease Resistance in Plants	2+0
NEMA 514/ ENT 520\$	Plant Quarantine, Biosafety and Biosecurity	2+0
NEMA 515/ PATH 521/ ENT 524	IPM in Protected Cultivation	2+1
NEMA 591	Master's Seminar	1+0
NEMA 599	Master's Research	0+30

*Core Courses for Master's

I. **Course Title** : **Principles of Nematology**

II. **Course Code** : **NEMA 501**

III. **Credit Hours** : **2+1**

IV. **Aim of the course**

To project the importance of nematodes in agriculture and impart basic knowledge on all aspects of plant nematology.

V. **Theory**

Unit I

Characteristics of Phylum Nematoda and its relationship with other related phyla, history and growth of Nematology; nematode habitats and diversity- plant, animal and human parasites; useful nematodes; economic importance of nematodes to agriculture, horticulture and forestry.

Unit II

Gross morphology of plant parasitic nematodes; broad classification, nematode biology, physiology and ecology.

Unit III

Types of parasitism; nature of damage and general symptomatology; interaction of plant-parasitic nematodes with other organisms.

Unit IV

Plant nematode relationships, cellular responses to infection by important phytonematodes; physiological specialization among phytonematodes.

Unit V

Principles and practices of nematode management; integrated nematode management.

Unit VI

Emerging nematode problems, Importance of nematodes in international trade and quarantine.

VI. **Practical**

- Studies on kinds of nematodes- free-living, animal, insect and plant parasites;
- Nematode extraction from soil;
- Extraction of migratory endoparasites, staining for sedentary endoparasites;
- Examination of different life stages of important plant parasitic nematodes, their symptoms and histopathology.

VII. Suggested Reading

- Dropkin VH. 1980. *An Introduction to Plant Nematology*. John Wiley & Sons, New York. Maggenti AR. 1981. *General Nematology*. Springer-Verlag, New York.
- Perry RN and Moens M. 2013. *Plant Nematology*. 2nd Ed. CABI Publishing: Wallingford, UK.

- Thorne G. 1961. *Principles of Nematology*. McGraw Hill, New Delhi.
- Walia RK and Bajaj HK. 2003. *Text Book on Introductory Plant Nematology*. ICAR, New Delhi.
- Walia RK. and Khan MR. 2018. *A Compendium of Nematode Diseases of Crop Plants*, ICAR-AICRP (Nematodes), IARI, New Delhi.

I. Course Title : Principles of Taxonomy

II. Course Code : NEMA 502

III. Credit Hours : 2+0

IV. Aim of the course

To sensitize the students on the theory and practice of classifying organisms and the rules governing the same.

V. Theory

Unit I

Introduction to history and principles of systematics and importance. Levels and functions of systematics. Identification, purpose, methods-character matrix, taxonomic keys. Descriptions- subjects of descriptions, characters, nature of characters, analogy vs homology, parallel vs convergent evolution, intra-specific variation in characters, polythetic and polymorphic taxa, sexual dimorphism.

Unit II

Classification of animals: Schools of classification- Phenetics, Cladistics and Evolutionary classification. Components of Biological Classification: Hierarchy, Rank, Category and Taxon. Species concepts, cryptic, sibling and etho-species, infra-specific categories. Introduction to numerical, biological and cytogenetical taxonomy.

Unit III

Nomenclature: Common vs Scientific names. International Code of Zoological Nomenclature, criteria for availability of names, validity of names. Categories of names under consideration of ICZN. Publications, Principles of priority, and

homonymy, synonymy, type concept in zoological nomenclature. Speciation, anagenesis vs cladogenesis, allopatric, sympatric and parapatric processes.

VI. **Suggested Reading**

- Blackwelder RE. 1967. *Taxonomy – A Text and Reference Book*. John Wiley & Sons, New York. Kapoor VC. 1983. *Theory and Practice in Animal Taxonomy*. Oxford & IBH, New Delhi.
- Mayr E. 1971. *Principles of Systematic Zoology*. Tata McGraw-Hill, New Delhi.
- Quicke DLJ. 1993. *Principles and Techniques of Contemporary Taxonomy*. Black i.e, London.

I. **Course Title : Structural and Functional Organization of Nematodes**

II. **Course Code : NEMA 503**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

Familiarization with structural organization of nematode body so as to enable the students to understand biology, physiology and classification of nematodes.

V. **Theory**

Unit I

Introduction and general organization of nematode body; Morphology and anatomy of nematode cuticle, hypodermis, musculature and pseudocoelom.

Unit II

Digestive system- Structural variations of stoma, oesophagus, intestine and rectum in nematodes.

Unit III

Reproductive system- Variations in female and male reproductive systems, types of reproduction, spermatogenesis and oogenesis.

Unit IV

Types and structure of excretory-secretory systems; nervous system and associated sense organs.

Unit V

Embryogenesis, Cell lineage and postembryonic development; Process of hatching and moulting.

VI. **Practical**

- Studies on variations in nematode shapes and sizes, morphological details of cuticle, cuticular markings and ornamentation, variations in stoma, oesophagus, rectum;

- Types and parts of female and male reproductive systems, sense organs, and excretory system.

VII. Suggested Reading

- Bird AF and Bird J. 1991. *The Structure of Nematodes*. Academic Press, New York.
- Chitwood BG and Chitwood MB. 1950. *An Introduction to Nematology*. Univ. Park Press, Baltimore.
- Maggenti AR. 1981. *General Nematology*. Springer-Verlag, New York.
- Malakhov VV. 1994. *Nematodes: Structure, Development, Classification and Phylogeny*.
- Smithsonian Institution Press, Washington DC.

I. **Course Title** : Nematode Systematics

II. **Course Code** : NEMA 504

III. **Credit Hours** : 2+1

IV. **Aim of the course**

Understanding concepts in nematode taxonomy, development of skills in the identification of plant parasitic nematodes up to genera and species levels.

V. **Theory**

Unit I

Gross morphology, principles of nematode taxonomy -levels of taxonomy, systematics vs. taxonomy, morpho-taxonomy, molecular taxonomy, identification, classification, taxonomic categories, taxonomic characters, morphometry, Zoological nomenclature, species concept and speciation (allopatric and sympatric).

Unit II

Taxonomic position of nematodes and their relationships with allied groups;

Classification and diagnoses of nematodes up to ordinal rank (Secernentea and Adenophorea)

Unit III

Taxonomy of free living nematodes

Unit IV

Classification of plant parasitic nematodes; Order Tylenchida and diagnoses of its sub-orders, super families, families and important genera; Order Aphelenchida, Dorylaimida and Triplonchida and diagnoses of their important genera.

VI. **Practicals**

- Collection of soil and plant samples from different habitats, processing and preservation of samples; and preparation of temporary mounts, processing of nematode specimens and permanent mounts;

- Preparation of en face view and TS of nematodes, perineal pattern of root knot nematodes and cone-top structure for cyst nematodes;
- Identification of soil and plant nematodes from nematode suspension and mounted slides;
- Camera lucida drawing of nematodes, measurement of nematodes using traditional as well as image analyzing software;
- Procedures for PCR- Taxonomy.

VII. Suggested Reading

I. **Course Title** : Nematological techniques

II. **Course Code** : NEMA 505

III. **Credit Hours** : (1+2)

IV. **Aim of the course**

Understanding the principles, theoretical aspects and developing skills in nematological techniques.

V. **Theory**

Unit I

Principles and use of light, scanning and transmission electron microscopes, and other laboratory equipments.

Unit II

Survey and surveillance methods; collection of soil and plant samples; techniques for extraction of nematodes from soil and plant material; estimation of population densities.

Unit III

Killing, fixing, clearing and mounting nematodes; measurements, preparation of perineal patterns, vulval cones of cyst nematodes, en-face views and body section of nematodes.

Unit IV

In-vitro and *in vivo* culturing techniques of plant parasitic, bacteriophagous, mycophagous and omnivorous nematodes.

Unit V

Staining nematodes in plant tissues; microtomy for histopathological studies; collection of plant root exudates and their bioassay; preparation of plant materials for exhibition.

Unit VI

Application of molecular techniques in Nematology.

VI. Practical

- Collection of soil and plant samples;
- Extraction of nematodes from soil by Baermann funnel, sieving and decanting, elutriation and sugar centrifugal methods;
- Extraction of cysts from soil;
- Extraction of nematodes from plant material;
- Estimation of population densities;
- Staining plant material for nematodes;
- Killing and fixing nematodes, clearing nematodes by slow and Seinhorst's methods;
- Preparation of temporary and permanent mounts;
- Measurements, drawing, microphotography, special preparation of nematodes – perineal patterns, vulval cones, en-face and body sections;
- Collection of root exudates, preparation of exhibits of nematode diseased plant material, *in-vitro* culturing techniques of nematodes- callous culture, excised root and carrot disc techniques.

I. **Course Title : Nematode Diseases of Crops**

II. **Course Code : NEMA 506**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

To impart basic knowledge about the causal organism, nature of damage, symptoms

V. **Theory**

Diagnosis of causal organism, distribution, host range, biology and life cycle, nature of damage, symptoms, interaction with other organisms, and management of nematode diseases in different crops.

Unit I

Cereal crops- Ear-cockle and *tundu* diseases of wheat, *molya* disease of wheat and barley; rice root nematode, rice root-knot and cyst nematode problems, *ufra* and white tip diseases of rice; lesion nematodes, cyst nematodes of maize and sorghum.

Unit II

Pulses, Sugar, Fibre, Fodder and Oilseed crops- Pigeon pea cyst nematode, root knot nematode, reniform nematode, lesion, lance nematode, sugarbeet cyst and soybean cyst nematode problems.

Unit III

Vegetable crops- root-knot disease, reniform nematode, potato cyst nematode; stem and bulb nematode. Nematode problems of protected cultivation.

Unit IV

Fruit crops- root-knot nematode, reniform nematode, slow decline of citrus. Flowers- root-knot nematode, foliar nematodes, bulb nematodes, Mushroom-nematode problems.

Unit V

Plantation, medicinal and aromatic crops- burrowing nematode problem of banana, spices and condiments, root-knot and lesion nematode problems of coffee and tea, red ring disease of coconut. Forests- Pine wilt disease.

VI. Practical

- Diagnosis of causal organisms;
- Identification of different life cycle stages;
- Study of symptoms and histopathology of nematode damage in different crops, study tours for field diagnosis of nematode problems.

VII. Suggested Reading

I. **Course Title** : **Nematode Biology and Physiology**

II. **Course Code** : **NEMA 507**

III. **Credit Hours** : **2+1**

IV. Aim of the course

To develop understanding of life cycle patterns, feeding and metabolic processes in phytonematodes which have implications in their management.

V. Theory

Unit I

Host finding and invasion, feeding, hatching, moulting; life cycle patterns in different types of nematodes.

Unit II

Types of reproduction, gametogenesis, embryogenesis and post embryogenesis.

Unit III

Chemical composition of nematodes, hydrolytic enzymes, pseudocoelom and function of transport.

Unit IV

Physiology of digestive system, intermediary metabolism.

Unit V

Osmoregulation, physiology of excretory-secretory and neuromuscular systems.

VI. Practical

- Studies on embryogenesis and post-embryogenesis, hatching, moulting, life cycle development, feeding, enzymatic assay by electrophoresis.

VII. Suggested Reading

- Croll NA. 1970. *The Behaviour of Nematodes: The Activity, Senses and Responses*. Edward Arnold, London.
- Croll NA and Mathews BE. 1977. *Biology of Nematodes*. Blackie, Glasgow. Lee DL. 2002. *The Biology of Nematodes*. Taylor & Francis, London.

- Wallace HR. 1963. *The Biology of Plant Parasitic Nematodes*. Edward Arnold, London.

I. Course Title : Nematode Ecology

II. Course Code : NEMA 508

III. Credit Hours : 2+1

IV. Aim of the course

To understand the life of plant parasitic nematodes in their environment; their survival strategies, and how to exploit these for their control.

V. Theory

Unit I

Definition and scope; components of environment; evolution of nematodes; ecological classification, prevalence, distribution and dispersal of nematodes.

Unit II

Role of nematodes in the food web; habitat and niche characteristics; community analysis and population estimation models.

Unit III

Effects of abiotic and biotic factors on nematodes.

Unit IV

Environmental extremes and nematode behaviour- aggregation, swarming, orientation, feeding and reproduction.

Unit V

Survival strategies of nematodes in adverse environment and absence of host.

Unit VI

Modeling population dynamics and relations with crop performance; ecological considerations in nematode management, data interpretation and systems simulation.

VI. Practical

- Study of nematode fauna in varied agro-ecological systems;
- Community analysis of nematode populations;
- Laboratory exercises on influence of abiotic factors on movement and hatching, green-house experiments on effect of abiotic factors on nematode populations and plant growth.

VII. Suggested Reading

- Croll NA. 1970. *The Behaviour of Nematodes: The Activity, Senses and Responses*. Edward Arnold, London.

I. **Course Title** : **Nematode Interactions with Other Organisms**

II. **Course Code** : **NEMA 509**

III. **Credit Hours** : **2+1**

IV. **Aim of the course**

To understand the role of nematodes in disease complexes involving fungal, bacterial, viral and other organisms.

V. **Theory**

Unit I

Concept of interaction and its importance in disease complexes and their management involving nematode and other organisms

Unit II

Interaction of plant parasitic nematodes with wilt causing fungal pathogens and microfungi.

Unit III

Interaction of plant parasitic nematodes with root rot and other fungal pathogens.

Unit IV

Interaction of plant parasitic nematodes with bacterial pathogens, other nematode species and arthropods.

Unit V

Virus transmission by nematodes.

VI. **Practical**

- Green-house experiments to study the role of plant parasitic nematodes in wilt/rot causing fungal and bacterial pathogens.

VII. **Suggested Reading**

- Khan MW. 1993. *Nematode Interactions*. Chapman & Hall, New York.
- Lamberti F, Taylor CE and Seinhorst JW. 1975. *Nematode Vectors of Plant Viruses*. Plenum Press, London.

I. **Course Title : Nematode Management**

II. **Course Code : NEMA 510**

III. **Credit Hours : 2+1**

IV. **Aim of the course**

To impart comprehensive knowledge about the principles and practices of nematode management.

V. **Theory**

Unit I

Concepts and history of nematode management; crop loss estimation, ecological and socio-economic aspects, cost-benefit ratios and pest risk analysis.

Unit II

Chemical methods- nematicides, their types, classification, mode of action, applicators and application methods, antidotes, and economizing nematicidal use.

Unit III

Cultural practices- crop rotations and cropping sequences, fallowing, flooding, soil solarisation, time of sowing, organic amendments of soil, bio-fumigation, antagonistic and trap crops, sanitation, etc. Physical methods- use of heat, hot water treatment and other methods of disinfestations of planting material.

Unit IV

Biological methods- concepts and terminology, use of predators and parasites as biological control agents, their mass multiplication and field use; phytotherapeutic methods – use of antagonistic plants and antinemic plant products.

Unit V

Genetic methods- plant resistance; legal methods- quarantine regulations; integrated management – concepts and applications

VI. **Practical**

- *In-vitro* screening of synthetic chemicals and plant products for nematicidal activity, and their application methods;
- Methods for screening of crop germplasm for resistance against nematodes, laboratory exercises on biocontrol potential of fungal, bacterial parasites, and predacious fungi and nematodes.

VII. Suggested Reading

- Bhatti DS and Walia RK. 1994. *Nematode Pest Management in Crops*. CBS, New Delhi. Brown GL. 1977. *The Nematode Destroying Fungi*. CBP, Guelph.

I. Course Title : Beneficial Nematodes

II. Course Code : NEMA 511

III. Credit Hours : 1+1

IV. Aim of the course

To sensitize about the use of nematodes for the biological control of insect pests of crops, and application of some nematodes as biological models and as indicators of environmental pollution.

V. Theory

Unit I

Beneficial nematode fauna – predators, parasites of insects, molluscs and other pests; Entomophilic nematodes- important groups, types of nematode-insect associations; taxonomic characteristics of nematode parasites of insects.

Unit II

Host-parasite relations and life cycle of mermithids, entaphelenchids, thelastomids, sphaerularids and tylenchids.

Unit III

Entomopathogenic nematodes- *Steinernema*, *Heterorhabditis*, *Oscheius* their morphological characteristics, taxonomic status, biology and mode of action.

Unit IV

Entomopathogenic nematodes- mass multiplication techniques, formulations, field applications and efficacy, success stories.

Unit V

Nematodes as biological models, nematodes as indicators of pollution, role of nematodes in organic matter recycling.

VI. Practical

Isolation, identification, mass rearing and application methods of entomopathogenic nematodes.

VII. Suggested Reading

- Gaugler R and Kaya HK. 1990. *Entomopathogenic Nematodes in Biological Control*. CRC Press, Boca Raton, Florida.

I. Course Title : Principles of Integrated Pest Management

II. Course Code : NEMA 512/ ENT 510

III. Credit Hours : 1+1

IV. Aim of the course

To familiarize the students with principles of insect pest management, including concept and philosophy of IPM. Train students in computation of ETL, implementing IPM programmes.

V. Theory

Unit I

History and origin, definition and evolution of various related terminologies.

Unit II

Concept and philosophy, ecological principles, economic threshold concept, and economic consideration.

Unit III

Tools of pest management and their integration- legislative, cultural, physical and mechanical methods; pest survey and surveillance, forecasting, types of surveys including remote sensing methods, factors affecting surveys; political, social and legal implications of IPM; pest risk analysis; pesticide risk analysis; cost-benefit ratios and partial budgeting; case studies of successful IPM programmes.

VI. Practical

- Characterization of agro-ecosystems;
- Sampling methods and factors affecting sampling;
- Population estimation methods;
- Crop loss assessment- direct losses, indirect losses, potential losses, avoidable losses, unavoidable losses;
- Computation of EIL and ETL;
- Crop modeling; designing and implementing IPM system.

VII. Suggested Reading

I. **Course Title : Disease Resistance in Plants**

II. **Course Code : NEMA 513/ PL PATH 513**

III. **Credit Hours : 2+0**

IV. **Aim of the course**

To acquaint with disease resistance mechanisms in plants.

V. **Theory**

Unit I

Introduction and historical development, dynamics of pathogenicity, process of infection, variability in plant pathogens, gene centres as sources of resistance, disease resistance terminology.

Unit II

Disease escape, disease tolerance, disease resistance, types of resistance, identification of physiological races of pathogens, disease progression in relation to resistance, stabilizing selection pressure in plant pathogens.

Unit III

Host defence system, morphological and anatomical resistance, preformed chemicals in host defence, post infectious chemicals in host defence, phytoalexins, hypersensitivity and its mechanisms.

Unit IV

Gene-for-gene concept, protein-for-protein and immunization basis, management of resistance genes. Strategies for gene deployment.

I. **Suggested Reading**

I. **Course Title : Plant Quarantine, Biosafety and Biosecurity**

II. **Course Code : NEM 514/ ENT 520**

III. **Credit Hours : 2+0**

IV. **Aim of the course**

To acquaint the learners about the principles and the role of Plant Quarantine in containment of pests and diseases, plant quarantine regulations and set-up.

V. **Theory**

Unit I

Definition of pest, pesticides and transgenics as per Govt. notification; relative importance; quarantine – domestic and international. Quarantine restrictions in the movement of agricultural produce, seeds and planting material; case histories of exotic pests/ diseases and their status.

Unit II

Plant protection organization in India. Acts related to registration of pesticides and transgenics. History of quarantine legislations, PQ Order 2003. Environmental Acts, Industrial registration; APEDA, Import and Export of bio-control agents.

Unit III

Identification of pest/ disease free areas; contamination of food with toxigens, microorganisms and their elimination; Symptomatic diagnosis and other techniques to detect pest/ pathogen infestations; VHT and other safer techniques of disinfestation/ salvaging of infected material.

Unit IV

WTO regulations; non-tariff barriers; Pest risk analysis, good laboratory practices for pesticide laboratories; pesticide industry; Sanitary and Phytosanitary measures.

VI. **Suggested Reading**

- Rajeev K and Mukherjee RC. 1996. *Role of Plant Quarantine in IPM*. Aditya Books.
- Rhower GG. 1991. Regulatory Plant Pest Management. In: *Handbook of Pest Management in Agriculture*. 2nd Ed. Vol. II. (Ed. David Pimental). CRC Press.

- I. **Course Title** : **IPM in Protected Cultivation**
- II. **Course Code** : **NEMA 515/ PATH 521/ ENT 524**
- III. **Credit Hours** : **2+1**

IV. **Aim of the course**

To sensitize the pest and disease scenario developing in crops raised under protected cultivation and to impart knowledge about the remedy.

V. **Theory**

Unit I

Characteristics of protected cultivation and tools for sustainable crop production outline of major biotic stresses in protected cultivation including: fungi, bacteria, virus, nematode, insects and mites.

Unit II

Sampling and monitoring pests and diseases; epidemiology and damage relationships; loss assessment; population dynamics of biotic stress agents; factors responsible for severity of pests and diseases.

Unit III

Host plant resistance to pathogens and insects; management strategies for protected cultivation: disinfestation of soil and growth media; preventive, scouting and early detection; and curative measures: biological control of sap sucking pests, leaf miners; soil- and air-borne pathogens; pesticides selectivity, applications and resistance management; buzz pollination.

VI. **Practical**

- Visit to familiarize with pest and disease situations developing in protected cultivation;
- Symptomatology and damages; identification of the causes; estimation of population densities; management tactics/ approaches and recommendations; production and commercialization of biological agents.

VII. **Learning outcome**

Students are expected to be well versed with the crop pest and disease problems associated with protected cultivation and their management.

Suggested Broad Topics for Master's and Doctoral Research

- Identification of key nematode pests emerging in regional agro-ecosystems
- Development of molecular diagnostic tools of phytonematodes
- Nematode problems of peri-urban and protected agriculture systems, and their management
- Role of nematodes in organic matter recycling
- Modelling nematode populations for disease forecasting and predicting yield losses
- Nematodes as indicators of environmental pollution
- Identification of cost effective nematode-suppressive cropping systems for specific agro- ecosystems
- Isolation, identification and characterization of phytochemicals for nematoxicity
- Disinfection of nematode-infected planting material through eco-friendly sanitary methods

- Characterization of molecular markers and genes governing resistance to key nematode pests
- Management of nematodes with antagonistic bacteria
- Bionomics of potential bio-control agents and their field efficacy
- Devising non-chemical methods of nematode management in mushroom cultivation
- Development of nematode management modules for IPM systems
- Field efficacy and formulation of entomopathogenic nematodes against foliar and soil-borne insect pests of crops
- Study of disease complex involving nematodes and other plant pathogens.
- Nematode suppressive rhizospheric microorganisms.
- Nematode suppressive endophytes.
- Management of nematodes using RNAi
- Factors related to entomopathogenic nematode- bacterium symbionts
- Management of root knot nematodes in protected cultivation system
- Assessment of nematode damage and yield losses in organic farming system

Course Title with Credit Load for Ph.D in Nematology

Course Code	Course Title	Credit Hours
NEMA 601**	Nematode Phylogeny and Systematics	2+1
NEMA 602**	Nematode Disease Development and Host Resistance	2+1
NEMA 603**	Advances in Nematode Management	2+1
NEMA 604**	Physiological and Molecular Nematology	2+1
NEMA 605/ PL PATH 606@	Plant Biosecurity and Biosafety	2+0
NEMA 691	Doctoral Seminar I	1+0
NEMA 692	Doctoral Seminar II	1+0
NEMA 699	Doctoral Research	75

**Core Courses for Doctoral Programme; @Cross-listed with Plant Pathology; \$Cross-listed with Entomology

I. Course Title : Nematode Phylogeny and Systematics

II. Course Code : NEMA 601

III. Credit Hours : 2+1

IV. Aim of the course

Concepts in Systematics, understanding nematode diversity, evaluation and analysis of taxonomic characters for inferring interrelationships among nematode groups, modern methods and tools for identification of nematodes, and phylogenetic analysis.

V. Theory

Unit I

Phylogenetic systematics – Evolutionary systematics, Cladistics, phylogenetic trends (morphological) and molecular phylogenetic framework for the phylum Nematoda, phylogenomics

Unit II

Taxonomic characters, numerical taxonomy, morphometry, variations, statistics in taxonomic descriptions, description of new species, preparation of illustrations,

keys and compendia for nematode species.

Unit III

Identification of common species of root knot nematodes by esterase phenotypes and race/ pathotypes of root knot/ cyst/ reniform nematodes by differential host tests.

Unit IV

Recent advances in nematode identification- molecular, biochemical, immunodiagnostic, molecular characterization and DNA finger-printing techniques.

VI. Practical

- Detailed studies of morphological structures and identification of plant parasitic nematodes up to species level;
- Preparation of compendia and keys;
- Drawing and measurements using camera lucida and computer software;
- Procedures for identification of species/ races of root-knot/ cyst/ reniform nematodes.

- Isozyme analysis for identification of common species of root knot nematodes. rDNA-RFLP for diagnosis of nematode species;
- Sequence analysis, alignment, phylogenetic analysis, preparation of phylogenetic tree and interpretation.

VII. Suggested Reading

I. **Course Title** : **Nematode Disease Development and Host Resistance**

II. **Course Code** : **NEMA 602**

III. **Credit Hours** : **2+1**

IV. **Aim of the course**

To update knowledge on the recent research trends in the field of plant nematode relationships at genetic and molecular level.

V. **Theory**

Unit I

Mechanisms of pathogenesis, cytological and biochemical changes induced by nematode feeding.

Unit II

Plant defense systems, role of nematodes.

Unit III

phytoalexins, etc. against major plant parasitic nematodes. Genetic basis of plant resistance to nematodes and identification of resistance genes against economically important nematodes.

Unit IV

Application of biotechnological methods in the development of nematode resistant crop cultivars; resistance markers; incorporation of resistance by conventional breeding and transgenic approaches.

Unit V

Influence of microorganisms on plant nematode interactions.

VI. Practical

- Microtomy for study of histopathological changes induced by important nematodes, screening techniques for assessment of resistance in crop germplasm against nematodes.

VII. Suggested Reading

- Barker KR, Pederson GA and Windham GL. 1998. *Plant and Nematode Interactions*. CABI, Wallingford.
- Fenoll C, Grundler FMW and Ohl SA. 1997. *Cellular and Molecular aspects of Plant-Nematode Relationships*. Kluwer Academic Press, Dordrecht.

I. **Course Title** : **Advances in Nematode Management**

II. **Course Code** : **NEMA 603**

III. **Credit Hours** : **2+1**

IV. Aim of the course

To keep abreast with latest developments and trends in nematode management.

V. Theory

Unit I

Isolation, identification, host specificity, mode of action, culturing and field application potential of promising bio-control agents- predacious and parasitic fungi; nematoxic fungal culture filtrates.

Unit II

Isolation, identification, host specificity, mode of action, culturing and field application potential of promising bio-control agents- parasitic and nematode antagonistic bacteria; predacious mites and predacious nematodes.

Unit III

Mass culturing, formulation, quality control, bio-safety and registration protocols of bio-control agents.

Unit IV

Phytoalexins, allelochemicals, phytotherapeutic substances, novel nematicides, deployment of resistant varieties and non-host crops in nematode suppressive cropping systems, emergence of resistance breaking biotypes, recent regulatory provisions and methods, quarantine and disinfection.

Unit V

Nematode management modules for integrated pest and disease management in cropping systems. Nematode management options and approaches for organic farming, precision farming and protected cultivation system. Application of GIS and GPS technology for surveillance and management.

VI. Practical

- Green-house experiments on the efficacy of fungal and bacterial bio-control agents, botanicals.

VII. Suggested Reading

- Jana BL. 2008. *Precision Farming*. Research Books and Periodicals Pvt. Ltd., Delhi. Lillesend TW, Kiefer RW and Chipman JW. 1979. *Remote Sensing and Image Interpretation*. John Wiley & Sons, New York.
- Perry RN and Moens M. 2013. *Plant Nematology*. 2nd Ed., CABI, Wallingford, London. Poinar GO Jr and Jansson H-B. 1988. *Diseases of Nematodes*. Vols. I, II. CRC Press, Boca Raton, Florida. Scientific Publ., Jodhpur.
- Starr JR, Cook R and Bridge J. 2002. *Plant Resistance to Parasitic Nematodes*. CABI, Wallingford.
- Stirling GR. 2014. *Biological Control of Plant parasitic Nematodes*, 2nd Ed., CAB International, UK
- Tarafdar JC, Pripathi KP and Kumar M. 2007. *Organic Agriculture*. Upadhyaya RK, Walia RK and Dubey OP. 2004. *IPM Systems in Agriculture. Vol. IX. Phytonematology*. Aditya Books, New Delhi.

- I. **Course Title** : **Physiological and Molecular Nematology**
- II. **Course Code** : **NEMA 604**
- III. **Credit Hours** : **2+1**
- IV. **Aim of the course**
Appraisal on the application of modern biotechnological tools in Nematology.
- V. **Theory**
Unit I
Cell biology- Structural and functional aspects; genetics and evolution in plantparasitism in nematodes.
Unit II
Caenorhabditis elegans- a model system for gerontology, cytogenetics, physiology, nutritional, toxicological and pharmacological studies; *Heterodera glycines* as a model for biology, proteomic and genomic studies.
Unit III
Chemoreception, neurobiology, and biochemical basis of communication in nematodes, molecular basis of host recognition, Nematode-Associated Molecular Patterns (NAMPs), molecular pathways of plant-nematode interaction.
Unit IV
Biochemical, genetical and molecular basis of plant nematode interaction; histopathological, cellular and molecular changes in host feeding cells, resistance genes, genome editing, sequencing of genome, Transcriptome and Proteome analysis of plant parasitic nematodes, RNAi technology,
Unit V
Biochemical and molecular basis of survival strategies in nematodes, molecular mechanism of host resistance against plant parasitic nematodes, molecular and novel approaches for nematode management.
- VI. **Practical**
 - Isolation and quantification of proteins from nematode juveniles and eggs;
 - Molecular weight determination of nematode protein;
 - Buffer preparation for molecular techniques, PCR, â-esterase polymorphism in root-knot nematode;
 - Nematode DNA isolation from juveniles and eggs;

- RFLP of nematode DNA;
- Nematode DNA amplification using PCR for nematode identification, RNAi technology.

VII. Suggested Reading

- Lamberti F, Giorgi C and Bird D. 1994. *Advances in Molecular Plant Nematology*. Plenum Press.
- Perry RN and Wright DJ. 1998. *The Physiology and Biochemistry of Free-living and Plant Parasitic Nematodes*. CABI, London.
- Riddle DL. 1997. *C. elegans II*. Cold Spring Harbor Press.
- Wood WB. 1988. *The Nematode Caenorhabditis elegans*. Cold Spring Harbor Press, US
Zuckerman BM. 1980. *Nematodes as Biological Models*. Vols. I, II. Academic Press, New York.

I. **Course Title** : **Plant Biosecurity and Biosafety**

II. **Course Code** : **NEMA 605/ PL PATH 606**

III. **Credit Hours** : **2+0**

IV. **Aim of the course**

To facilitate deeper understanding of plant biosecurity and biosafety issues in agriculture.

V. **Theory**

Unit I

History of biosecurity, concept of biosecurity, components of biosecurity, Quarantine, Invasive Alien Species, biowarfare, emerging/ resurgence of pests and diseases.

Unit II

National Regulatory Mechanism and International Agreements/ Conventions, viz., Agreement on Application of Sanitary and Phytosanitary (SPS) Measures/ World Trade Organization (WTO), Convention on Biological Diversity (CBD), International Standards for Phytosanitary Measures, pest risk analysis, risk assessment models, pest information system, early warning and forecasting system, use of Global Positioning System (GPS) and Geographic Information System (GIS) for plant

biosecurity, pest/ disease and epidemic management, strategies for combating risks and costs associated with agroterrorism event, mitigation planning, integrated approach for biosecurity.

Unit III

Biosafety, policies and regulatory mechanism, Cartagena Protocol on Biosafety and its implications, issues related to release of genetically modified crops.

Suggested Broad Topics for Master's and Doctoral Research

- Identification of key nematode pests emerging in regional agro-ecosystems

- Development of molecular diagnostic tools of phytonematodes
- Nematode problems of peri-urban and protected agriculture systems, and their management
- Role of nematodes in organic matter recycling
- Modelling nematode populations for disease forecasting and predicting yield losses
